FEATURES
Two AD8222 circuits
    Dual channel
    Differential out
Easy to connect screw terminals
Decoupled supply lines
Pads for RFI filtering

GENERAL DESCRIPTION
The AD8222-EVALZ has two AD8222 instrumentation amplifier circuits: one circuit is configured for dual-channel operation, while the other is configured for single-channel, differential output operation. Inputs, outputs, references, and the supplies are routed to screw terminals for easy connectivity.

The PCB board has four layers. The top and bottom layers are used for routing, and the two internal layers are ground planes.

The ground plane was removed underneath the Rg resistors. This is a precaution against any capacitance mismatch at the two Rg pins, which may affect ac CMRR.

JUMPER SETTINGS

Table 1.
<table>
<thead>
<tr>
<th>Jumpers</th>
<th>Purpose</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>J1A, J1B, J11</td>
<td>Connect inputs together</td>
<td>Unconnected</td>
</tr>
<tr>
<td>J2A, J2B, J12, J13</td>
<td>Connect reference pins to ground</td>
<td>Connected</td>
</tr>
</tbody>
</table>

In the default factory setting, the reference pins of the AD8222 are connected to GND through J2A, J2B, J12, and J13. Therefore, in the shipping configuration, W2A:REF1, W2B:REF2, W13:REF2, and W13:+IN2 are connected to GND. To disconnect the terminal from GND, remove the corresponding jumper.

QUICK START
The quick start feature assumes that the jumpers are in their factory default positions.

To begin:

• Connect ground lead to GND.
• Connect a 15 V supply to +Vs.
• Connect a −15 V supply to −Vs.
• Ground −IN1.
• Connect a 1V p-p, 1 kHz source signal to +IN1. A replica of the signal should now appear at OUT1.

SETTING THE GAIN
The gain setting resistors are R1A and R1B for the dual-channel part and R11A for the differential output part. The pads are sized for 0603-sized resistors, although 0402 and 0805 sizes can also be used.

EMI FILTERING
The board comes with 0603 component pads for an EMI filter. These components are shown in Table 2.

Table 2.

<table>
<thead>
<tr>
<th>Channel</th>
<th>Components</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dual Channel A</td>
<td>R3A, R2A, C1A, C2A, C3A</td>
</tr>
<tr>
<td>Dual Channel B</td>
<td>R3B, R2B, C1B, C2B, C3B</td>
</tr>
<tr>
<td>Differential Output Channel</td>
<td>R13, R12, C11, C12, C13</td>
</tr>
</tbody>
</table>

The board, as shipped, does not contain EMI filtering. The resistors pads are populated with 0 Ω resistors, and the capacitors are not populated.

See the AD8222 data sheet for more information on EMI filtering.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
