Evaluating the ADF4159 Frequency Synthesizer for Phase-Locked Loops

FEATURES
Self-contained board, including synthesizer, 100 MHz reference, USB interface, and voltage regulators
Accompanying software allows control of synthesizer functions from a PC (via USB interface)
Externally powered by 5.5 V and 15 V supplies
Evaluates the ADF4169

EVALUATION KIT CONTENTS
EV-ADF4159EB1Z or EV-ADF4159EB3Z evaluation board
CD with evaluation software
USB cable

REQUIRED ADDITIONAL EQUIPMENT
VCO (for EV-ADF4159EB3Z)
Loop filter components (for EV-ADF4159EB3Z)
Soldering equipment
Spectrum analyzer
Power supplies (5.5 V and 15 V)
Windows®-based PC with USB port for evaluation software

REQUIRED DOCUMENTS
ADF4159 data sheet
ADF4169 data sheet
UG-383 user guide

REQUIRED SOFTWARE
Analog Devices, Inc., ADF4158/9/69 PLL evaluation software, Version 4.x or higher (included on the CD in the evaluation board kit or available for download at www.analog.com)

GENERAL DESCRIPTION
The EV-ADF4159EB1Z/EV-ADF4159EB3Z evaluates the performance of the ADF4159 frequency synthesizer for phase-locked loops (PLL) and the ADF4169 frequency synthesizer. A photograph of the evaluation board is shown in Figure 1. The evaluation board involves the ADF4159 synthesizer, a USB connector, SMA connectors, a reference oscillator, and power supply connectors. There are also footprints for active filter components and a voltage controlled oscillator (VCO); if used, these components must be soldered to the board to complete the loop. An on-board temperature compensated crystal oscillator (TCXO) provides the 100 MHz reference frequency. A USB cable is included to connect the board to a PC USB port.

In addition, the evaluation kit contains Windows®-based software to allow easy programming of the synthesizer.

**8/13—Revision 0: Initial Version**
**EVALUATION BOARD HARDWARE**

**OVERVIEW**

The evaluation board kit includes a cable for connecting the evaluation board to the USB port of a PC. The silkscreen for the evaluation board is shown in Figure 2 and the schematics for the evaluation board are shown in Figure 10 to Figure 13.

**POWER SUPPLIES**

The evaluation board is powered by a 5.5 V power supply connected to the red and black banana connectors. Connect the red connector to a 5.5 V power supply and the black connector to ground.

The operational amplifier is powered by a 15 V power supply. Optionally, the VCO can be powered independently by connecting a 5 V supply to the VVCO SMA and removing R27. When using this option, reduce the voltage on the banana connectors to 5 V.

The USB section of the evaluation board (see the area bounded by the gold box in Figure 1) is powered by the USB host.

**LOCAL OSCILLATOR**

The 100 MHz TXCO provides the reference frequency. To ensure that the PFD frequency is also 100 MHz, set the on-chip R-divider to 1.

Alternatively, an external reference can be used by connecting the reference to the REFIN SMA and removing R10 and L1.

**VCO**

The VCO configuration is different for each evaluation board model: EV-ADF4159EB1Z and EV-ADF4159EB3Z. See the VCO Configuration section for more information.

**OUTPUT SIGNALS**

With a VCO connected, the evaluation board outputs the VCO output on the EXT_VCOOUT SMA and the VCO output is divided by 2 on the VCO/2 SMA.

![Figure 2. Evaluation Board Silkscreen](image-url)
LOOP FILTER

The loop filter schematic is included in Figure 13. The general placement of loop filter components is shown in Figure 3. When using a loop filter, calculate the values of the necessary components and solder them to the board. The ADIsimPLL™ software, which is available on the CD included in the evaluation board kit or from www.analog.com/adisimpll, provides tools for designing loop filters and calculating component values.

After soldering the loop filter components to the evaluation board, connect a 15 V supply to the operational amplifier power supplies, a 15 V supply to the red 15 V test point, and the ground to the black AGND test point (see Figure 1). See the Sample Loop Filter section for an example configuration.

Sample Loop Filter

Use the parameters of the sample loop filter described in this section as a guide for adding a loop filter onto the evaluation board.

Refer to Figure 3 for proper placement of components and to Table 1 for recommended component values.

The sample loop filter is designed for

- VCO kV = 150 MHz/V
- PFD frequency = 100 MHz
- Charge pump current = 2.5 mA
- Loop bandwidth = 282 kHz
- Phase margin = 48.1°

EVALUATING THE ADF4169

Both EV-ADF4159EB1Z and EV-ADF4159EB3Z can be used to evaluate the ADF4169. To do so requires minor modifications to the evaluation board. Use the following steps to modify the evaluation board:

1. Remove U1 (ADF4159CCPZ) and replace it with ADF4169CCPZ.
2. Remove R60.
3. Connect 1.9 V from a power supply to the +1_8 V test point.

The ADF4159 evaluation board control software can be used to evaluate the ADF4169.
**VCO CONFIGURATION**

**EV-ADF4159EB1Z**

The HMC515LP5E VCO is installed on the EV-ADF4159EB1Z and has a range of 11.5 GHz to 12.5 GHz. The RFOUT signal is connected to the EXT_VCOOUT SMA. The RFOUT/2 signal of the VCO is fed back to the ADF4159 PLL; therefore, when the VCO outputs 12 GHz, the ADF4159 is locked at 6 GHz.

For optimum performance, ensure that the components values are as described in Table 2.

</table>

1 DNP means do not populate.

Terminate the VCO/2 SMA with 50 Ω.

**EV-ADF4159EB3Z**

The EV-ADF4159EB3Z evaluation board does not have a VCO installed. The board is configured for use with an external VCO board. Connect an external VCO board to the evaluation board using SMA cables. There are two configuration options:

- The VCO control voltage can connect to the VTUNE SMA and the VCO RFOUT signal can connect to the VCO/2 SMA. This configuration uses the on-board loop filter.
- The CPOUT SMA can connect the ADF4159 charge pump output to an external loop filter. Connect the VCO RFOUT signal to the VCO/2 SMA to feed the signal back into the ADF4159.

For optimum performance, ensure that the component values are as shown in Table 3.

EVALUATION SETUP

Figure 4. Evaluation Setup Block Diagram

Figure 5. Evaluation Setup
GETTING STARTED
INSTALLING THE SOFTWARE

For the software installation procedure, see the UG-476 user guide. The control software for the EV-ADF4159EB1Z and EV-ADF4159EB3Z is provided on the CD included in the evaluation board kit or is available for download at www.analog.com.

CONFIGURING AND SETTING UP THE BOARD

1. Set up the circuit as shown in Figure 4.
2. Run the evaluation board software.
3. Click ADF4159/ADF4169 and USB board (green), and then click Connect (see Figure 6).
4. Click the Main Controls tab to view the main controls (see Figure 7). The default values are set to lock a VCO at 12 GHz.
5. Click Write All Registers (7, 6, 6, 5, 4, 4, 3, 2, 1, 0) or manually write to each register (Write R7, Write R6 - Ramp 1, Write R6 - Ramp 2, Write R5 - Ramp 1, Write R5 - Ramp 2, Write R4 - Ramp 1, Write R4 - Ramp 2, Write R3, Write R2, Write R1, and Write R0)
6. On the spectrum analyzer, confirm that the output signal is locked at 12 GHz.

Figure 6. Software—Device Selection
USING THE SOFTWARE

Main Controls

Use the **Main Controls** tab to select the RF and PLL settings. Because the evaluation board is set up to feedback the VCO/2 output to the ADF4159, set the **RF VCO Output Frequency** to half the VCO output in the RF Settings area. Set the **Reference Frequency** to the same value as the applied reference signal. The PFD frequency is calculated from the reference frequency, the R-counter, the reference doubler, and the reference-divide-by-2. Ensure that the value in the **PFD Frequency** field matches the value specified in the loop filter design.

In the **PLL Settings** area, program the **Charge Pump Setting** to the value for which the loop filter was designed.

Program the **Phase Detector Polarity** to negative when using an inverting active loop filter configuration (as is on this evaluation board).

From the **Muxout** drop-down menu choose the signal that is connected to the output of the MUXOUT pin.

Clicking **Pulse TXdata** triggers a pulse on the TXDATA pin. This pulse starts low and then stays high for approximately 4 µs.

The register values are shown at the bottom of the window. When the background of a register value is green, this indicates that the value has been changed and needs to be written to the device. Clicking the button below each register value writes that value to the device.

![Image of software interface with Main Controls highlighted](image-url)

**Figure 7. Software—Main Controls**
Ramp and Shift-Key Controls

Configure the ramping and shift-keying functionality of the ADF4159 in the Ramps and Shift-keying tab.

The ramp type can be selected in the Ramp mode drop-down menu, and the various ramp parameters can be set in the CLK1 spin box and the drop-down menus in the Up Ramp area.

Example

Figure 8 shows the ramping and shift-keying settings for an example of a continuous triangular ramp of 128 up ramp steps over 50 MHz with an up ramp time of 96 µs. (Up ramp refers to the ramp from the initial frequency to the end frequency, whereas down ramp refers to the ramp/jump from the end frequency back to the initial frequency.) For 50 MHz, the PLL is programmed for a 25 MHz ramp because the evaluation board uses the RFOUT/2 signal. After each parameter is set in the software, it must be written to the device.

The other options in this tab allow configuring the various ramps and shift-keying controls of the ADF4159.

NOTES

ESD Caution
ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high-energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions
By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the “Evaluation Board”), you are agreeing to be bound by the terms and conditions set forth below (“Agreement”) unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you (“Customer”) and Analog Devices, Inc. (“ADI”), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above; and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board; and (iii) permit any Third Party to access the Evaluation Board. As used herein, the term “Third Party” includes any entity other than ADI, Customer, their employees, affiliates, and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED “AS IS” AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER’S POSSESSION OR USE OF THE EVALUATION BOARD; INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI’S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS ($100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
