SUBJECT INDEX

A
Aasnaes, Hans Bent, 6.84
AAVID Thermal Technologies, Inc. General Catalog, 12.96
Absolute accuracy, definition, 6.122-123
Absolute maximum ratings:
  data sheet, example, 6.189
  op amp, 1.76-78
  typical, table, 1.90
Absorption, shielding loss, 11.43-44
AC coupling, 1.23
AC current path, ground plane resistance, 12.72
ACCEL Technologies, Inc., 13.91, 13.92
Accelerometer, 3.15-18
  basic unit cell sensor building block, 3.15
  Coriolis, 3.20-21
  internal signal conditioning, diagram, 3.16
  low-g, tilt measurement, 3.16-17
Accuracy:
  absolute, definition, 6.122-123
  logarithmic, definition, 6.123
  relative, definition, 6.123
ACLR, see: Adjacent channel leakage ratio
Acquisition time:
  definition, 6.173
  SHA, 7.59
Active feedback amplifier, 2.49-51
  CMR independent of resistor bridge, 2.49
Active feedback CMR/gain calculator, screen, 13.45
Active filter:
  antialiasing design, 8.121-127
  element, limitations, 8.114-115
Active inductor, diagram, 8.69
Active mixer:
  advantages, 4.7
  basic operation, 4.8-9
  classic, circuit, 4.8
  gain, 4.9
  RF/IF circuit, 4.8-9
AD2S90, integrated RDC, 6.79
AD210:
  3-port isolator, 2.34-36
  in motor control current sensing, circuit, 2.35
  schematic diagram, 2.35
AD215:
  low distortion two-port isolator, 2.36-37
  block diagram, 2.37
AD260/AD261, high speed digital isolators, 2.40-42
AD526:
  monolithic software PGA in-amp:
    circuit, 2.89
    latched digital interface, 2.90
AD534, four-quadrant multiplier based on Gilbert cell, 4.17
AD536A:
  monolithic rms/dc converter, 2.85-86
  diagram, 2.86
AD538, monolithic analog computer, block diagram, 2.57
AD539:
  wideband dual two-quadrant multiplier, 2.77-78, 2.81, 4.13-14
  block diagram, 2.78, 4.14
AD549, FET input op amp, 1.51
AD574, industry-standard ADC, encoder, 5.22
AD580, precision band gap reference, with Brokaw Cell, 7.4, 7.5
AD586, buried zener reference, circuit, 7.9
AD587, buried zener reference, noise reduction pin, 7.15
AD588, load cell amplifier, 3.96
  diagram, 3.96
  single supply load cell amplifier, 3.97
  diagram, 3.97
AD589, strain gage sensor amplifier, 3.95
  Diaram, 3.95
AD590:
  current output temperature sensor, 3.33
  multiplexed, 3.33
AD594, Type J thermocouple, 3.43
AD594/AD595, monolithic thermocouple amplifier with cold-junction compensator, diagram, 3.42-43
AD595, Type K thermocouple, 3.43
AD598:
  LVDT signal conditioner, 3.3-4
  diagram, 3.4
AD598 and AD698 data sheet, 3.27
AD600, gain vs. differential control voltage, 4.36
AD602, gain vs. differential control voltage, 4.36
AD620:
  In-amp, in-motor control current sensing, circuit, 2.35
  CMR vs. frequency, graph, 2.24
  gain-bandwidth pattern, 2.27
  monolithic IC in-amp:
    composite application, 2.15-16
    schematic, 2.13-14
  PSRR vs. frequency, graphs, 2.25
  Strain gage sensor amplifier, 3.95
AD620B, bridge amplifier, dc error budget, 2.28
Load cell amplifier, 3.96
Diagram 3.96
AD621, pin-programmable-gain in-amp, 2.22
AD621B, load cell amplifier 3.96
Diagram 3.96
single cell load cell amplifier, 3.97
Diagram 3.97
AD623, fixed gain difference amplifier, 12.12-13
AD624C, monolithic in-amp, gain error, 2.22
AD629:
difference amplifier, 12.12-13
differential-to-single-ended amplifier,
applcation circuit, 2.9
AD641:
monolithic log amp:
block diagram, 4.25
error curve, 4.25
transfer function, 4.25
waveform effect on log linearity, 4.26
AD645, FET input op amp, 1.51
AD698:
LVDT signal conditioner:
with half-bridge, 3.4-5
synchronous demodulation, 3.3-5
diagram, 3.4
AD768, 16-bit BiCMOS precision DAC, 6.27
AD780, reference, 2.63
AD790:
comparator with hysteresis, 2.68
diagram, 2.69
AD797, low noise op amp, 2.90-91
AD811, CFB op amp, comparison with model,
graphs, 13.13
AD817, video op amp driver, power
dissipation vs. power, 12.89
AD822, JFET-input dual rail-to-rail output
op amp, 2.15-16
AD825, 8-bit, dual, high speed FET input op amp,
8.137-138, 8.141
AD830, active feedback amplifiers, 2.49
AD830/AD8129/AD8130, active feedback
amplifiers, circuit, 2.49
AD831 data sheet, 4.10
AD834:
8-pin basic four-quadrant multiplier,
block diagram, 4.19
multiplier, implicit conversion, circuit,
2.84
transformer coupled multiplier, block
diagram, 4.19
AD847:
high frequency amplifier:
Bode plot, 8.120
Q-enhancement effects, 8.119
Op amp:
convergence, circuit and graphs, 13.16
open loop gain, graph, 1.12
parasitics, circuit and graphs, 13.15
AD848, op amp, open loop gain, graph, 1.12
AD849, op amp, open loop gain, graph, 1.12
AD1879, dual audio ADC, 6.98
AD813X, differential audio, 6.27-28
AD1170, modular ADC, 6.72
AD1580:
shunt mode IC reference, 7.5-6
circuit, 7.6
AD1582-85 series:
Band gap references:
advantages, 7.7-8
circuit, 7.7
connection diagram, 7.7
LDO, 7.7
AD185X series, audio DACs, data scrambling,
6.109-110
AD1853, dual 24-bit, 92 kSPS DAC, 6.110
AD1871:
24-bit 96 kSPS stereo audio multibit
sigma-delta ADC:
block diagram, 6.99
digital filter characteristics, 6.100
second order modulator and data
scrambler, 6.100
AD1955:
multibit sigma-delta audio DAC
diagram, 6.110
AD1900/AD1902/AD19004/AD1906:
Class-D audio power amplifier, 2.107-2.117
AD3300 60 mA LDO regulator, evaluation
board, 9.18
AD3300, 60 mA LDO regulator, circuit, 9.16
AD5535, 32-channel, 14-bit, 200 V output DAC,
evaluation board, 13.73
AD6645:
14-bit, 80 MSPS wideband ADC:
noise figure calculation, 6.154
Nyquist conditions, 6.153
SFDGR, graph, 6.139
SFDG vs. input power level, graph,
6.140
SNR performance, 6.160
SNR vs. aperture jitter, graph,
6.160
two-tone SFDGR:
graph, 6.142
vs. input amplitude, graph, 6.142
14-bit 80 MSPS/105 MSPS XFCB ADC,
6.182-185, 6.188, 6.193-194, 6.202
52-lead Power Quad 4 package, 12.94
application circuit, 6.202
14-bit 105 MSPS ADC, with SHA, circuit,
7.62
encode command specifications, table,
6.178
sample timing specifications, table,
6.178
AD7111, LOGDAC, multiplying DAC, circuit, 6.38-39
AD7450, 12-bit, 1 MSPS ADC, evaluation board, 13.74
AD7524:
   CMOS DAC, block diagram, 6.14
   quad CMOS DAC, block diagram, 6.14
AD7528, 8-bit dual MDAC, 8.137-138, 8.141
AD7677:
   16-bit 1 MSPS switched capacitor PulSAR ADC, 6.48-49
   circuit, 6.49
AD77XX series:
   24-bit high sigma-delta ADC, 6.101, 6.103
   high resolution ADC:
      in cold-junction compensation, 3.44
      and RTD, 3.49-50
AD7710:
   sigma-delta ADC with PGA, 2.93-94
   circuit, 2.94
AD7710-series, 22-bit ADC, 7.19
AD7711, sigma-delta ADC with PGA, 2.93
AD7712, sigma-delta ADC with PGA, 2.93
AD7713, sigma-delta ADC with PGA, 2.93
AD7730:
   24-bit bridge transducer sigma-delta ADC, evaluation board, 13.72-73
   application circuit, 6.202
   direct conditioning of bridge circuit, 3.98
   ratiometric AC or DC drive w. Kelvin sensing 3.85, 3.96
   sigma-delta ADC, 6.115
   configuration assistant, 13.46-48
   screen, 13.47
   digital filter response, graph, 6.101
   single-supply bridge:
      block diagram, 6.103
      bridge application, schematic, 6.107
      digital filter response, graph, 6.105
   digital filter settling time, 6.106
   oversampling, 6.104
   resolution vs. output data and gain, 6.104
AD7846, 16-bit converter, 2.91-92
AD7943/AD7945/AD7948:
   2-quadrant multiplying DAC, schematic diagram, 6.19
   4-quadrant multiplying DAC, schematic diagram, 6.19
AD8001:
   absolute maximum ratings, table, 1.76
   feedback resistor values, packages, chart, 1.68
   high speed current feedback amplifier, 12.31-32
   evaluation board, 12.32
   high speed current-feedback amplifier:
      evaluation board, 13.70-71
      stray capacitance, pulse response, 12.32
      maximum power chart, 1.77
   op amp:
      optimum feedback resistor vs. package, table, 1.18
      packages, recommended components, 13.89
AD8016:
   20-lead PSOP3 package, copper slug for heat transfer, 12.88
   PSOP3 and BATWING packages, thermal characteristic curves, 12.87
AD8017AR:
   8-pin SOIC op amp, 12.83-86
   maximum power dissipation data sheet, 12.83
   standard and Thermal Coastline packages, thermal rating curves, 12.86
   thermal rating curves, 12.86
AD8029, PSRR, 12.77
AD8036, and output clamp amplifier, graph, 2.61
AD8036/AD8037:
   clamp amplifier:
      distortion near clamping region, graph, 2.62
      equivalent circuit, 2.59
      overdrive recovery, graph, 2.62
      performance, 2.60
AD8037, clamp amplifier, driving flash converter, circuit, 2.62-63
AD8051, op amp, phase margin, graph, 1.13
AD8051/AD8052/AD8054, high speed VFB op amp, 1.83, 1.86
AD8054, phase margin, graph, 1.70
AD8055, single supply op amp, 6.26
AD8057, single op amp, thermal packaging, 12.90
AD8058, dual op amp, thermal packaging, 12.90
AD8074, triple voltage feedback fixed-gain video transmission line driver, 2.4
AD8074/AD8075, 500 MHz triple buffer, 2.3
AD8075:
   triple video buffer, 1.66
   triple voltage feedback fixed-gain video transmission line driver, 2.4
AD8079A/AD8079B:
   260 MHz buffer, 2.4
   dual voltage feedback fixed-gain video transmission line driver, 2.4
AD8108/AD9109, video 8 × 8 crosspoint switch, 7.45
AD8110/AD8111, 260 MHz, 16 × 8 buffered crosspoint switch, 7.45
AD8113, audio/video 60 MHz, 16 × 16 crosspoint switch, 7.45
AD8114/AD8115, 225 MHz, 16 × 16 crosspoint switch, 7.45
AD8116, 16 × 16, 200-MHz buffered video crosspoint switch, circuit, 7.45
AD8129, low noise, high gain active feedback amplifier, 2.50-51
AD8129/AD8130:
  active feedback amplifiers, 2.49-51
differential input single-ended output gain block, 2.5
AD813X:
differential ADC driver, block diagram and equivalent circuit, 2.31
differential amplifier, DAC buffer circuit, 2.32
AD8130, CMR vs. frequency, graph, 2.50
AD8152, 3.2 Gbps, 34 × 34 asynchronous digital crosspoint switch, circuit, 7.46
AD8170:
bipolar video multiplexer, block diagram, 7.42
dual source RGB multiplexer, using three 2:1 muxes, circuit, 7.43
AD8174:
  4:1 mux, 7.44
  bipolar video multiplexer, block diagram, 7.42
AD8180, bipolar video multiplexer, block diagram, 7.42
AD8182, bipolar video multiplexer, block diagram, 7.42
AD8183/AD8185, video multiplexer, block diagram, 7.43
AD8183/AD8185/AD8186/AD8187, triple 2:1 mux, 7.43
AD8184, 4:1 mux, 7.44
AD8186/AD8187, video multiplexer, single-supply, block diagram, 7.43
AD8230, auto-zeroing in-amp with high CMR, 3.45-46
AD8330, VGA, block diagram, 4.34
AD8345, silicon FRIC quadrature modulator, block diagram, 4.11
AD8350, differential in/differential out gain block, 2.6
AD8354, gain block fixed-gain amplifier, circuit, 2.5
AD8362:
  true rms-responding power detector:
    block diagram, 4.29
    internal structure, 4.30
    typical application, 4.31
AD8367:
  high performance 45dB VGA:
    block diagram, 4.38
    linear-in-dB gain, 4.37
AD8370:
  VGA with precision gain control, 4.38-39
    block diagram, 4.39
AD8531/32/34:
  ordering guide for packaging, 1.92
  single-supply op amp, 1.83, 1.92
AD8551:
  chopper-stabilized amplifier, 12.11
  in grounded circuit, 12.12
AD8551/AD8552/AD8554:
  auto-zero amplifiers:
    noise comparison, 2.123
    output spectrum, graphs, 2.122
AD8571/AD8572/AD8574, auto-zero amplifiers, output voltage, graphs, 2.122
AD9002, 8-bit, 125 MSPS flash converter, 2.62-63
AD9042:
  12-bit, 41 MSPS ADC, 7.60-61
  with SHA, circuit, 7.61
AD9054A, 8-bit, 200 MSPS ADC, functional diagram, 6.63
AD9226, 12-bit, 65 MSPS ADC, SINAD and ENOB, graph, 6.136-137
AD9235:
  12-bit, 65 MSPS pipelined ADC, 6.55
    timing, graph, 6.55
AD9245:
  14-bit 80 MSPS 3V CMOS ADC:
    lead-frame chip-scale package, 12.92
    power dissipation vs. sample rate, graph, 12.91
AD9410, 10-bit, 210 MSPS ADC, 6.51
AD9430:
  12-bit, 170 MSPS ADC, noise/power ratio, graph, 6.148
  12-bit, 170 MSPS/210 MSPS 3.3V BiCMOS ADC, 12.92-93
  100-lead 3-PAD TQFP, 12.93
  output driver, 12.49
  supply current vs. sample rate, graph, 12.93
  12-bit, 210 MSPS pipelined ADC, 6.55
AD9510:
  Clock distribution circuit 7.73-83
AD9514
  Clock generation circuit 7.67-72
AD9620, monolithic open-loop buffer, 2.3
AD9630, monolithic open-loop buffer, 2.3
AD9631, op amp, inadequate decoupling effects, 12.79
AD976X, TxDAC, 6.24
AD977X, TxDAC, 6.24
AD9772, TxDAC, DAC harmonic images calculator, screen, 13.51
AD9773, 12-bit Transmit DAC (TxDAC), 6.34
AD9775:
14-bit 160 MSPS TxDAC, 6.34
14-bit 160 MSPS/400 MSPS TxDAC, core, diagram, 6.21-22
AD9777:
16-bit, 160 MSPS dual interpolating DAC, 12.94
16-bit, 160 MSPS transmit DAC (TxDAC), 6.34
SFDR, graph, 6.171
AD985X series, DDS ICs, 12.94
AD9850:
DDS, 13.48-50
register configuration assistant, screen, 13.49
DDS/DAC synthesizer, 4.46-47
diagram, 4.46
AD9870, IF digitizing subsystem, 6.109
AD22100, temperature sensor, ratiometric, 3.34
AD22105, thermostatic switch, 3.58-59
AD22151:
linear output magnetic field sensor:
diagram, 3.8
using Hall technology, 3.7-8
AD22151 data sheet, 3.27
Adams, R., 6.113
Adams, Robert, 2.127, 6.113
Adams, Robert W., 6.113
Adams, R.W., 6.113
ADC:
1-bit, comparator, 6.44
3-bit binary ripple, input and residue waveforms, graph, 6.60
3-bit serial, binary output, diagram, 6.59
5-bit counting, circuit, 6.64
10-/11-/12-bit ADC, theoretical noise power ratio, graphs, 6.147
12-bit:
noise floor, graph, 6.130
SFDR, ratio of sampling clock to input frequency, graphs, 6.129
analog bandwidth, 6.137-138
anti-aliasing suppression assistant, screen, 13.53
architectures, 6.40-84
basic function, diagram, 6.40
binary, single-state transfer function, graphs, 6.58
bit error rate, 6.163-166
buffering, logic noise, 12.29-30
charge run-down, 6.65
converter analog bandwidth, graph, 13.22
converter performance vs. analog input frequency, graph, 13.22
converter performance vs. sample rate, graph, 13.21
ADC (cont)
counting and integrating architectures, 6.64
digital output, handling, 12.62-64
DNL, typical, graph, 13.20
dual slope/multislope, 6.73-75
dynamic performance analysis, diagram, 6.129
error corrected, 6.52-57
gain and ENOB vs. frequency, graph, 6.138
generalized bit-per-stage architecture, diagram, 6.58
Gray coded (folding), 6.58-63
high resolution, with VFC and frequency counter, 6.68
high speed:
CMOS buffer/latch, diagram, 12.30
logic noise, 12.29-30
high impedance, differential input, 12.14
input and output definitions, 5.1
input structures, typical, diagrams, 13.20
internal reference, 6.40-41
metastable states, 6.163-166
model, showing noise and distortion sources, 6.131
multibit and 1-bit pipelined core combination, diagram, 6.57
no specification of IMD, 6.145
noise figure, calculation, 6.149
output, with error codes, graph, 6.164
overvoltage, 11.1
pipelined, 6.52-57
ramp run-up, 6.65-66
reference and buffer, diagram, 6.41
sampling:
containing SHA, 7.51
using integral SHA, 6.161
sampling clock, 6.42
SAR, 6.42, 6.45-47
selection guide, samples, 6.209-211
serial bit-per-stage binary, 6.58-63
SFDR specification, 6.138
sparkle codes, 6.163-166
subranging, 6.52-57
trimming error, graphs, 6.121
successive approximation, 6.37
supply voltage, 6.43
total SNR, equation, 6.160-161
tracking, 6.66-67
transfer function, graph, 13.23
transient response and overvoltage recovery, 6.161-163
ADC Analyzer, 13.74-75
ADC FIFO Evaluation Kit:
functional block diagram, 13.76
illustration, 13.77
ADF439F, trench-isolated LLCMOS multiplexer, 7.50
ADF4112, PLL, 4.67
ADG200 series, CMOS switches/multiplexers, 7.23
ADG201 series, linear-compatible CMOS switches/multiplexers, 7.23
ADG438F, trench-isolated LLCMOS multiplexer, 7.50
ADG508F, trench-isolated LLCMOS multiplexer, 7.50
ADG509F, trench-isolated LLCMOS multiplexer, 7.50
ADG511, single-supply switch, 2.92-93
ADG528F, trench-isolated LLCMOS multiplexer, 7.50
ADG708:
  8-channel multiplexer:
    crosstalk vs. frequency, graph, 7.33
    off-isolation vs. frequency, graph, 7.30
ADG8XX-series, CMOS switch, 7.26
ADG801/ADG802, CMOS switch, in-resistance vs. input signal, graph, 7.26
ADG918, 1GHz CMOS MUX/SPDT absorptive switch, circuit, 7.40-41
ADG918/ADG919, 1GHz switch, isolation and frequency response, graphs, 7.40
ADG919, 1GHz CMOS MUX/SPDT reflective switch, circuit, 7.40
ADIsimADC:
  data converter modeling, 13.18-25
  behavioral model, 13.18
  distortion, 13.22-23
  gain, offset, and dc linearity, 13.19-20
  hardware considerations, 13.18-19
  jitter, 13.24-25
  latency, 13.25
  sample rate and bandwidth, 13.21
ADIsimPLL, 13.26-29
  advantages, 13.26
  frequency domain results, 13.30
  graphs, 13.28
  and phase noise, 13.26
  schematic output, circuit, 13.29
  software, version 2.5, enhancements, 13.27
  time domain results, 13.29
  graphs, 13.28
Adjacent channel/leakage ratio, definition, 6.145
Adjacent channel/power ratio, definition, 6.145
ADLH0033, bipolar open-loop hybrid buffer amplifier, circuit, 2.1
ADM1201:
  microprocessor temperature monitor, 3.61-63
    block diagram, 3.63
    input signal conditioning circuits, diagram, 3.62
ADP1147, switch modulation, 9.47
ADP1148, buck PWM regulator with variable frequency, 9.62
ADP3000:
  switching regulator, 9.48
  switching regulator IC using PBM, 9.52
ADP330X, LDO anyCAP regulator, schematic, 9.13
ADP3300 series, LDO pre-regulators, 7.15
ADP3310:
  PMOS FET 1A LDO regulator controller: diagram, 9.21
  external current sense resistor, 9.23-25
ADP3603/ADP3604/ADP3605, regulated −3V output
  voltage inverters, application circuit, 9.93
ADP3603/ADP3604/ADP3605/ADP3607:
  regulated −3V output voltage inverters, 9.91-93

  digital output, 3.56-58
Temperature-related gain error, from mismatched resistor, 10.15
A 10.7 MHz, 120 dB Logarithmic Amp, 4.40
Terman, Frederick E., 1.79, 1.80
Termination, microstrip transmission lines, circuits, 12.46
THD + N, definition, 1.60, 6.135-136
THD, definition, 1.60, 6.135-136
Thermal Coastline packaging, 9.18-19
  internal details, 9.19
  for op amp, 12.85
  Thermal EMF, resistor, 10.18
Thermal hysteresis, XFET reference, 7.10
Thermal management, 12.83-96
  PCB, 12.83-96
Thermal noise, resistor, 10.21-22
Thermal performance, comparison of op amp packaging, graph, 12.90
Thermal relationships, basic, table, 12.84
Thermal resistance, 12.83-84
  design considerations, 12.88
  LDO regulators, 9.17-19
  measured between junction and ambient air, 12.85
  op amp, 1.78
  package-dependent, 12.85
Thermistor, 3.52-55
  amplifier, linearized, diagram, 3.55
  definition, 3.52
  Kelvin connection, 3.52
  nonlinearity and temperature range, 3.53
  NTC, linearization, graph, 3.54
  resistance characteristics, 3.52
  temperature coefficient, graph, 3.53
  temperature sensor, characteristics, 3.30
Thermocouple:
  auto-zero amplifier, 3.45-46
  sampling phase diagrams, 3.45-46
  basic principles, diagrams, 3.38
  Thermocouple (cont)
    cold-junction compensation, 3.36
    junction materials, table, 3.36
    output, 5.2
    output voltages for Types J, K, and S, graph, 3.37
    principles, 3.36-44
    Seebeck coefficient vs. temperature, graph, 3.38
    temperature measurement, 3.39
    temperature sensor, characteristics, 3.30
    terminated leads, isothermal block, 3.41
    Type J, 3.36-37
    Type K, 3.37, 3.41
    Type S, 3.36-37
    Seebeck coefficient, 3.47
    vs. temperature, 3.47
Thermocouple effect, resistor, 10.18
Thermoelectric effect, resistor, 10.18-20
Thermoelectric emf, 3.39
Thermometer code, 6.50
Thermometer DAC, 6.9-11
  current-output, current sources, diagram, 6.10
  diagram, 6.5
  high speed, complementary current outputs, diagram, 6.11
Thermostatic switch, 3.58-60, 3.58-61
Thevenin equivalent output voltage, 2.63
Thevenin equivalent resistance, 13.8
Thevenin impedance, 12.45
Thevenin source, 13.45
Thick film resistor:
  comparison chart, 8.112
  table, 10.21
Thin film laser trimming, for DAC, 6.99
Thin film resistor:
  comparison chart, 8.112
  table, 10.21
Third order intercept point:
  determination, 1.63
  distortion, 1.61-63
  variation with frequency, 1.62
13dB small signal bandwidth, op amp, definition, 1.66
Thomas, L.C., 8.79, 8.143
Three op amp in-amp, 2.12-14
  single +5 V supply restrictions, circuit, 2.14
Three-terminal voltage reference, 7.2
Time, EMI, 11.28
Time domain response:
  filter, 8.18-19
  impulse response, 8.18-19
  step response, 8.19
Timing specifications, 6.177-179
  data sheet, example, 6.185-187
TMP01:
  dual setpoint temperature controller, 3.59-60
  diagram, 3.60

Index 41
TMP03/TMP04:
digital out temperature sensor:
diagram, 3.56
output format, 3.57
TMP04, interfacing to microcontroller, 3.58
TMP35:
temperature sensor, for cold junction compensation, 3.42
voltage output sensor, 3.41-42, 3.44
TO-99 metal can package device, 12.17
Tolerance, voltage reference, 7.13
Toomey, P., 8.144
Total effective input noise, for ADC, calculation from SNR, 6.151
Total harmonic distortion, see: THD
Total harmonic distortion plus noise, see: THD + N
Total input offset voltage, in-amp, definition, 2.23
Total noise:
calculation, 1.50, 1.56
op amp, 1.49-51
Total offset voltage, calculation, 1.41
Total output noise:
calculation, 2.27
calculations, 1.55-59
Total output offset error, calculation, 1.41-42
Total output rms noise, op amp, 1.59
Total rms jitter, 6.159
SHA, 7.57
Total unadjusted error, definition, 6.127
Tow, J., 8.79, 8.143
Trace:
conductor, resistance, 12.5
embedding, 12.42
PCB, 12.5-52
Track mode, 6.48
Track mode linearity, ADC with SHA, 7.61
Track-and-hold circuit, 7.51
Track-to-hold mode:
SHA:
errors, graph, 7.54
specifications, 7.54-57
Tracking ADC, 6.66-67
diagram, 6.67
Transconductance multiplier, basic, circuit diagram, 4.15
Transducer, temperature, characteristics, table, 3.30
Transfer characteristic slope, log amp, 4.24
Transfer function, high-pass filter, 8.8-9
Transformer:
common-mode power line isolation, EMI protection, 11.37
in isolation amplifier, 2.33-34
reset, 9.46
rotating, 3.10
Transient load, voltage reference, 7.1
Transient power-line disturbance, 11.35
Transient response:
ADC:
definition, 6.161
graph, 6.161
Transient voltage suppressor, 2.29
Transimpedance, definition, 1.32
Transimpedance amp, 1.17, 1.32
Transistor, input, 1.27
Transistor/op amp log amp, disadvantages, 4.21
Transitional filter, characteristics, 8.24
Translinear multiplier, four-quadrant, circuit diagram, 4.17
Translinear variable gain cell, diagram, 4.33
Transmission line, 12.35
driving, 13.37
microstrip, 12.35
PCB, symmetric stripline, 12.40-41
termination:
ECL, 12.48
and propagation delay, rule, 12.43
Transmit TxDAC family, 6.172
Transresistance, definition, 1.32
Travis, Bill, 3.27
Trefleaven, D., 8.144
Trench-isolation, LLCMOS switch, 7.50
