Streaming music and Internet connectivity—\$5

Roku hooked up with Blackfin's outstanding performance and programmability for its SoundBridge Radio. Blackfin® maximizes flexibility by decoding audio formats including MP3, WMA, AAC, AIFF, and WAV while running TCPIP, HTTP, UPnP, and UPnP AV with PlaysForSure DRM protocols. And it's field-upgradeable for future content, services, and usage modules. All at only 200 mW and \$5. Making connections: one more reason Blackfin is everywhere.
