► Hitachi Wooo D Series  
Digital Video Recorder with  
Instant Highlights

#### Goodbye fast forward, hello instant highlights

To enable instant highlighting in the top-of-the-line Wooo D Series DVRs, including the groundbreaking terabyte-size model, Hitachi's engineers needed a processor with a winning combination of performance and price. The high scorer? Blackfin®. With its simple programming model using high level languages, 400 MHz of processing power, and audio/video-centric peripherals, it easily handles Hitachi's custom audio/video digesting algorithm, with headroom and programmability for future features. And the price point: unbeatable. So Blackfin is everywhere the action is.
