

Product/Process Change Notice - PCN 21_0206 Rev. -

Analog Devices, Inc. One Analog Way, Wilmington, MA 01887

This notice is to inform you of a change that will be made to certain ADI products (see Appendix A) that you may have purchased in the last 2 years. **Any inquiries or requests with this PCN (additional data or samples) must be sent to ADI within 30 days of publication date.** ADI contact information is listed below.

PCN Title: Notification of Die Revision Change to LTC4281 and LTC4282

Publication Date: 05-Oct-2021

Effectivity Date: 07-Jan-2022 *(the earliest date that a customer could expect to receive changed material)*

Revision Description:

Initial Release

Description Of Change:

Please be advised that Analog Devices has made enhancements in the LTC4281 and LTC4282 products to improve the common mode rejection performance of the current limit amplifiers.

The enhancements improve the immunity of the offset cancellation circuit to noise during the cancellation phase by balancing resistances and capacitances, and moving offset cancellation to the output of the amplifier.

Additional enhancements were made to the OV pin ESD structure to improve latch-up performance.

Reason For Change:

The die changes were made to reduce sensitivity to common mode noise affecting some board layouts using these products.

Impact of the change (positive or negative) on fit, form, function & reliability:

This change does not impact the fit, form, function, or reliability of the LTC4281 and LTC4282.

Product Identification *(this section will describe how to identify the changed material)*

The new silicon can be identified with date code and lot traceability identification.

Summary of Supporting Information:

Qualification has been performed per industry standard test methods.

Comments

Qualification has been performed per industry standard test methods.
