DESCRIPTION

Demonstration circuit 2685B is a 4-port IEEE 802.3bt power sourcing equipment (PSE) composed of a DC2684A-B (daughter card) and DC2683A (motherboard). The DC2685B (kit) is used for evaluation of the LTC®4291-1/LTC4292 PSE chipset. Up to four IEEE 802.3af, IEEE 802.3at, or IEEE 802.3bt powered devices (PDs) can be connected and powered from this system using a single power supply. A DC590 is connected to the DC2685B for I²C interfacing with QuikEval™.

This demonstration manual provides a quick start procedure, a DC2684A-B daughter card overview, a DC2683A motherboard overview, schematics, and layout printouts. Design files for this circuit board are available.

All registered trademarks and trademarks are the property of their respective owners.
QUICK START PROCEDURE

Follow the quick start procedure below for basic operation of the DC2685B kit. Refer to Figure 1 through Figure 3 and Table 1 through Table 4 for proper equipment setup.

1. On the DC2684A-B daughter card set AUTO jumper JP1 (Figure 1) to a selected AUTO mode setting shown in Table 1.

2. On the DC2684A-B daughter card set 4PV# jumper JP2 (Figure 1) to a selected 4-Pair Valid setting as shown in Table 1.

3. On the DC2684A-B daughter card set PM1 jumper JP4 and PM0 jumper JP3 (Figure 1) to the power mode for evaluation specified in Table 2.

4. Align pin 1 of the 30-pin male connector on the DC2684A-B daughter card with pin 1 of the 30-pin female connector on the DC2683A motherboard as shown in Figure 2. Pin 12 is polarized to assist with the alignment. Carefully push the daughter card straight down until the male and female 30-pin connectors are flush with each other.

5. Connect a supply to the motherboard with the positive rail to AGND (+) and negative rail to VEE (–) as shown in Figure 3. Use a power supply capable of sourcing the maximum delivered power for all four ports set by JP3 and JP4 on the daughter card (or I2C configured power). Ramp the supply up to within the recommended voltage range specified in Table 3.

6. Set the LTC4291-1/LTC4292 I2C address switch SW1 on the motherboard to the one of the four addresses shown in Table 4.

7. On the DC590, set the VCCIO jumper JP6 to 3.3V. (Refer to Table 5 and the DC590 demo manual for further instructions for the DC590.)

8. Connect the DC590 to the DC2683A at connector J6 with a 14-pin ribbon cable as shown in Figure 3 and open the QuikEval GUI. A GUI for the LTC4291-1/LTC4292 is brought up by QuikEval. (Follow the DC590 demo manual instructions if this has not been previously setup.)

9. Connect up to four PDs to the DC2685B RJ45 connector J1, bottom row ports 1-4 as shown in Figure 3.

10. Optionally a 1000BASE-T data source may be connected to the DC2685B RJ45 connector J1, top row ports 1-4 for data pass through testing.

Figure 3. DC2685B Kit Connections
DEMONSTRATION CIRCUIT 2684A-B DAUGHTER CARD

Demonstration circuit 2684A-B is an IEEE 802.3bt 8-channel PSE daughter card that features the LTC4291-1/LTC4292 chipset. This daughter card mates with a 4-Port, 4-Pair PoE motherboard for use in IEEE 802.3bt Type 3 or 4 compliant Power over Ethernet PSE systems.

Board Layout

Parts placement, sense resistor block and Kelvin sensing, copper fill, trace routing, and spacing are crucial for LTC4291-1/LTC4292 chipset operation, robustness, and measurement accuracy. It is imperative to follow the layout requirements specified in the LTC4291-1/LTC4292 data sheet. The DC2684A-B demonstrates proper LTC4291-1/LTC4292 board layout on a compact daughter card approximately the height and width of a 2 × 4 RJ45 connector.

Isolation and Power Supplies

The LTC4291-1/LTC4292 chipset provides communication across an isolation barrier through a data transformer (Figure 4). All digital pins reside on the digital ground reference and are isolated from the analog PoE supply on the daughter card layout. A $V_{DD}$ logic supply and $V_{EE}$ PoE supply is brought in at the 30-pin connector J1.

![Figure 4. DC2684A-B Digital and Analog Isolation](image-url)
I/O LED Indicators

The DC2684A-B features two LEDs to indicate the states of the LTC4291-1/LTC4292 general purpose input/output pins GP0 and GP1. These pins are configured as inputs or outputs via I²C. GP1 and GP0 are referenced to DGND and driven by the LTC4291-1 when set as outputs (Figure 5). J2 provides test points for these pins.

I²C Communication and Addressing

The LTC4292/LTC4291 internal registers are accessed via I²C to read and/or write configuration, status, events and interrupt registers. The I²C lines SDAOUT, SDAIN and SCL connect to the 30-pin connector (Figure 6). Subsequently, the I²C bus is accessed on the motherboard. SDAOUT and SDAIN are tied together through shunt resistor R11 on the DC2684A-B for a common SDA line.

The LTC4291-1 address pins AD0 and AD1 are tied to DGND through shunt resistors R9 and R10 respectively. This sets these two address bits low. Address pins AD2 and AD3 are brought out to the 30-pin connector for configuration on the motherboard. See Figure 6 and Table 4.

4PV# Jumpers

The 4PVVALID pin of the LTC4291-1 is set by the 4PV# jumper JP2 on the DC2684A-B. See Table 1 for jumper settings. This jumper configuration along with Auto mode reset state is used to automatically determine the number of powered pairs. Refer to Table 1 for the configuration description.

Power Mode and Power Path Components

The DC2684A-B power mode jumpers PM1 and PM0 either tie the respective LTC4291-1/LTC4292 PWRMD1 and PWRMD0 pins to VEE or CAP2 through a 100Ω resistor. This configures the maximum port output power in the Auto mode reset state (see Table 2). The power path components (hot swap MOSFETs and resistors) for each channel on the DC2684A-B have been selected to handle all four power levels.

Surge Protection

The DC2684A-B has basic surge protection components across the VEE supply, VEE and AGNDP supply pins, and OUTnM pins. Refer to the LTC4291-1/LTC4292 hardware data sheet for further details on surge protection. D5 and C27 on the DC2684A-B provide example bulk TVS and...
DEMONSTRATION CIRCUIT 2683A MOTHER BOARD

capacitance components; these components must be sized to the final system requirements.

Demonstration circuit 2683A is a 4-Port, 2-channels per port IEEE 802.3bt PoE PSE motherboard. This board accepts an IEEE 802.3bt four port PSE daughter card featuring the LTC4291-1/LTC4292 chipset.

Daughter Card Insertion Precautions

When inserting or removing the daughter card into the DC2683A motherboard, verify all supplies and LEDs are off. Push the card straight down for insertion or pull straight up for removal to avoid bending the connector pins. Follow the instructions in the Quick Start Procedure for alignment.

Main VEE PoE Supply

The VEE supply is the main PoE supply and connects to the DC2683A with the positive rail to AGND (+) and the negative rail to VEE (−) as shown in Figure 3 of the Quick Start Procedure. The voltage must be within the range shown in Table 3 depending on the application PSE type. For full load testing at each port, choose a power supply that is set with a current limit higher than the maximum allowed output power at each port.

Onboard 3.3V Supply

The DC2683A motherboard has an onboard (non-isolated) 3.3V LDO for the LTC4291-1/LTC4292 VDD supply which is generated from the VEE supply. This onboard logic supply is for demonstration purpose to allow for a single supply connection to the DC2685B kit. DGND is tied to VEE through shunt resistor R42. To isolate the logic supply from the PoE supply, remove R42 and R41 and apply an external isolated 3.3V supply across VDD and DGND. If the DC2685B kit is connected in parallel for multi-quad port evaluation, verify all ground connections are correct before applying power.

LED Indicators

VEE LED (D5) and VDD LED (D7) indicate if a voltage is present at these supplies. Verify these LEDs are off before inserting or removing the daughter card.

Each pairset channel (2 per port) has a respective OUTnM LED to indicate if the channel is powered on with PoE. The INT LED (D6) indicates if the interrupt line is pulled low by the daughter card. When the interrupt is cleared (high) via I2C interrupt servicing, the LED is turned off.

Digital Connections

The DC590 (USB to I2C) controller board is connected to the DC2683A at J6 through a 14-pin ribbon cable. The QuikEval software must be previously installed. When QuikEval is opened, the software will automatically detect the DC2685B kit and open the LTC4291-1 GUI. I2C address pins AD3 and AD2 are set with a 2-bit switch SW3 on the DC2683A. Refer to Table 4 for setting the individual I2C address for each DC2685B kit.

Turret digital test points for SCL, SDA, DGND, INT, MSD, and RESET are provided on the DC2683A.

RJ45 Connections

PDs are connected using an Ethernet cable to any of the bottom row ports at 2 × 4, RJ45 connector J1 on the DC2683A. Test points for each channel output OUT1A through OUT4B, are provided. Optionally, an Ethernet data source may be connected with an Ethernet cable to any of the top row ports at J1.

MSD and RESET Pushbuttons

Pushbutton switch SW1, when pressed, pulls the RESET pin of the daughter card logic low. The PSE controller is then held inactive with all ports off. When SW1 is released, RESET is pulled high, and the PSE returns to the AUTO pin reset state.

Pushbutton switch SW2, when pressed, pulls the maskable shutdown input (MSD) pin of the daughter card logic low. When pressed, all ports that have their corresponding mask bit set in the mconfig register of the PSE controller will be shutdown. These ports must then be manually re-enabled via I2C or by resetting the PSE.
### Table 5. DC590 Jumper Selection. Refer to the DC590 Demo Manual for Further Details.

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices.
**Legal Terms and Conditions**

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the “Evaluation Board”), you are agreeing to be bound by the terms and conditions set forth below (“Agreement”) unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you (“Customer”) and Analog Devices, Inc. (“ADI”), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term “Third Party” includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED “AS IS” AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER’S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI’S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS ($100.00), EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
