Regulatory Compliance

The Analog 120-Pin Probing Board is designed to be used solely in a laboratory environment. The board is not intended for use as a consumer end product or as a portion of a consumer end product. The board is an open system design which does not include a shielded enclosure and therefore may cause interference to other electrical devices in close proximity. This board should not be used in or near any medical equipment or RF devices.

The Analog 120-Pin Probing Board is in the process of being certified to comply with the essential requirements of the European EMC directive 2004/108/EC and therefore carries the “CE” mark.

Thank you for purchasing the Analog 120-Pin Probing Board, Analog Devices, Inc. probing board for the ADSP-CM40x family of mixed-signal control processors.

The ADSP-CM408F mixed-signal control processor is based on the ARM® Cortex®-M4 processor core and is designed for motor control and industrial applications. The probing board is shipped with all of the necessary hardware—you can start the evaluation immediately.

Product Overview

The Analog 120-Pin Probing Board is a separately sold extender board that plugs onto the ADSP-CM403F and ADSP-CM408F EZ-KIT Lite® evaluation systems. The extender board aids the design and prototyping phases of processor-targeted applications.

The board extends the capabilities of the evaluation system by providing a point for probing any signal of the 120-pin asynchronous bus and PWM expansion interface connectors.

The board features:

- Two 120-pin connectors
  - Samtec QSH-060-01-F-D-A
  - Samtec QTH-060-01-F-D-A
Purpose of This Manual

- Four probing headers
  - Samtec TSW-115-07-L-D
- Eight GND headers
  - FCI 90726-402HLF

For information about the hardware components of the product, refer to Analog 120-Pin Probing Board Bill Of Materials.

Purpose of This Manual

The Analog 120-Pin Probing Board Manual provides instructions for installing the product hardware (board). A schematic and a bill of materials are provided for reference.

Intended Audience

The primary audience for this manual is a programmer who is familiar with an ARM Cortex-M4-based core.

The ADSP-CM40x family of mixed-signal control processors is based on the ARM Cortex-M4 processor core with floating-point unit and integrated SRAM memory, flash memory, accelerators, and peripherals.

The applicable documentation for programming the ARM Cortex-M4 processor core includes:

- Cortex-M4 Devices Generic User Guide
Preface

For additional information on this Analog Devices processor, see the ADSP-CM40x Mixed-Signal Control Processor Hardware Reference. This document describes the ARM Cortex-M4 processor core and memory architecture used on the ADSP-CM40x processor, but does not provide detailed programming information for the ARM core.

For more information about programming the ARM core, visit the ARM Information Center:

http://infocenter.arm.com/help/

Manual Contents

The manual consists of:

- Chapter 1, Using Analog 120-Pin Probing Board
  Describes the product functionality.

- Chapter 2, Analog 120-Pin Probing Board Hardware Reference
  Provides information about the board’s hardware components.

- Appendix A, Analog 120-Pin Probing Board Bill Of Materials
  Lists the hardware components used to manufacture the board.

- Appendix B, Analog 120-Pin Probing Board Schematic
  Lists the resources for board-level debugging.

What’s New in This Manual

This is the first edition (Revision 1.0) of the Analog 120-Pin Probing Board Manual.
Technical Support

You can reach Analog Devices processors and DSP technical support in the following ways:

- Post your questions in the processors and DSP support community at EngineerZone®:
  http://ez.analog.com/community/dsp

- Submit your questions to technical support directly at:
  http://www.analog.com/support

- E-mail your questions about processors and processor applications to:
  processor.support@analog.com or
  processor.china@analog.com (Greater China support)

- In the USA only, call 1-800-ANALOGD (1-800-262-5643)

- Contact your Analog Devices sales office or authorized distributor. Locate one at:
  www.analog.com/adi-sales

- Send questions by mail to:
  Processors and DSP Technical Support
  Analog Devices, Inc.
  Three Technology Way
  P.O. Box 9106
  Norwood, MA 02062-9106
  USA

Supported Products

This board supports Analog Devices ADSP-CM403F and ADSP-CM408F EZ-KIT Lites.
Product Information

Product information can be obtained from the Analog Devices Web site and the online help system.

Analog Devices Web Site

To access a complete technical library for each processor family, go to http://www.analog.com/processors/technical_library. The manuals selection opens a list of current manuals related to the product as well as a link to the previous revisions of the manuals. When locating your manual title, note a possible errata check mark next to the title that leads to the current correction report against the manual.

Also note, myAnalog.com is a free feature of the Analog Devices Web site that allows customization of a Web page to display only the latest information about products you are interested in. You can choose to receive weekly e-mail notifications containing updates to the Web pages that meet your interests, including documentation errata against all manuals. myAnalog.com provides access to books, application notes, data sheets, code examples, and more.

Visit myAnalog.com (found on the Analog Devices home page) to sign up. If you are a registered user, just log on. Your user name is your e-mail address.
EngineerZone

EngineerZone is a technical support forum from Analog Devices. It allows you direct access to ADI technical support engineers. You can search FAQs and technical information to get quick answers to your embedded processing and DSP design questions.

Use EngineerZone to connect with other DSP developers who face similar design challenges. You can also use this open forum to share knowledge and collaborate with the ADI support team and your peers. Visit http://ez.analog.com to sign up.

Notation Conventions

Text conventions used in this manual are identified and described as follows.

1 USING ANALOG 120-PIN PROBING BOARD

This chapter provides information about using the Analog 120-Pin Probing Board.

The following topics are covered.

- Package Contents
- Analog 120-Pin Probing Board Installation
- Expansion Interface
- Reference Design Information

For detailed information on how to program the ADSP-CM40x processors, refer to the documents listed in the Preface.

For detailed information about the specific evaluation system, refer to the ADSP-CM403F EZ-KIT Lite Evaluation System Manual or the ADSP-CM408F EZ-KIT Lite Evaluation System Manual.

Package Contents

Your Analog 120-Pin Probing Board package contains the following items:

- Analog 120-Pin Probing Board
- Hardware for securing the extender board onto the EK-KIT Lite
Analog 120-Pin Probing Board Installation

Contact the vendor where you purchased your EZ-KIT Lite or contact Analog Devices, Inc. if any item is missing.

**Analog 120-Pin Probing Board Installation**

Follow these instructions to ensure correct operation of the product hardware.

1. Attach the extender board to the EZ-KIT Lite.

   The $P1$ connector on the extender board can be connected to the corresponding 120-pin connector on the EZ-KIT Lite.

2. Use the provided hardware to secure the extender to the EZ-KIT Lite.
Using Analog 120-Pin Probing Board

This image shows the PWM 180-Pin Probing Board, but this is the same attachment setup for the Analog 120-Pin Probing Board.

Expansion Interface

The expansion interface allows a custom-designed daughter board to be tested across various hardware platforms that have the same expansion interface.

The expansion interface implemented on the ADSP-CM40x EZ-KIT Lites consists of two 180-pin connectors. The connectors contain a majority of the processor’s signals. There is also a 120-pin connector for Analog signals. The Analog 120-Pin Probing Board should not be connected to the 180-pin connectors.

Analog Devices does not support and is not responsible for the effects of additional circuitry.
Reference Design Information

A reference design info package is available for download on the Analog Devices Web site. The package provides information on the design, layout, fabrication, and assembly of the probing board.

The information can be found at:

http://www.analog.com/MCEII-AnalogProbingBoard
This chapter describes the hardware design of the Analog 120-Pin Probing Board.

The following topics are covered.

- **System Architecture**
  Describes the board’s configuration and explains how the board components interface with the processor.

- **Connectors**
  Shows the locations and provides part numbers for the on-board connectors. In addition, the manufacturer and part number information is provided for the mating parts.

### System Architecture

The Analog 120-Pin Probing Board allows all signals to be probed. Silkscreen on the board corresponds with the pin number of the QTH-060-01-F-D-A (P1) connector. These numbers also match one-to-one with the QSH-060-01-F-D-A (Jx) connector located on the attached EZ-KIT Lite.

It is also possible to connect the Analog 120-Pin Probing Board in between the EZ-KIT Lite and an extender card with additional circuitry. To do this, connect P1 of the extender card to the EZ-KIT Lite and attach the extender card to J1 of the Analog 120-Pin Probing Board.
Connectors

This section describes connector functionality and provides information about mating connectors. The connector locations are shown in Figure 2-1.
