DEMO MANUAL DC1882A
LTC3261EMSE
High Voltage, Low Noise Inverting Charge Pump

DESCRIPTION

Demonstration circuit 1882A is a high voltage inverting charge pump featuring the LTC®3261EMSE. The LTC3261 operates with an input voltage from 4.5V to 32V. The demo board provides the means to select between Burst Mode® operation or constant-frequency mode operation, plus select an operating frequency of 500kHz, 200kHz, and 50kHz.

The LTC3261 data sheet gives a complete description of the device, operation and application information. The data sheet must be read in conjunction with this quick start guide for demo circuit 1882A.

Design files for this circuit board are available at http://www.linear.com/demo

QUICK START PROCEDURE

Refer to Figure 1 for the proper measurement equipment setup and jumper settings, and follow the procedure below.

NOTE: When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the $V_{IN}$ or $V_{OUT}$ and GND terminals. See Figure 2 for proper scope probe technique.

1. Make sure the jumper settings are as follows:
   - JP1: EN is in the ON position.
   - JP2: MODE is in the BURST position.
   - JP3: FREQ is in the 500kHz position.
2. Set PS1 to 15V and turn on supply.
3. Slowly increase the load from 0mA to –100mA and observe the output voltage and output ripple.
4. Set the load to 0mA.
5. Move the MODE jumper, JP2, from the BURST position to the CONT FREQ position and then repeat step 3.
6. Set the load to 0mA.
7. Move the FREQ jumper, JP3, from the 500kHz position to the 200kHz position.
8. Slowly increase the load from 0mA to –50mA and observe the output voltage and output ripple.
9. Set the load to 0mA.
QUICK START PROCEDURE

10. Move the FREQ jumper, JP3, from the 200kHz position to the 50kHz position.

11. Slowly increase the load from 0mA to –10mA and observe the output voltage and output ripple.

12. Turn off the load and PS1.

13. Set up the load, AM2 and VM2, for the power conversion efficiency measurement, as illustrated in Figure 3.

14. Set the MODE jumper, JP2, to the BURST position and the FREQ jumper, JP3, to the 500kHz position.

15. Set PS1 to 15V and turn on the supply.

16. Set the load to a desired current from 0mA to 100mA.

17. Calculate the power conversion efficiency from the following formula:

   \[ \text{Efficiency} = \frac{V_L \cdot I_L}{V_S \cdot I_S} \cdot 100\% \]

Figures 4 and 5 illustrate how the power conversion efficiency varies with load current in Burst Mode operation and in constant-frequency mode operation.

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction is **not exclusive.**

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
