		9	Linked VMID match.

Table 48-656: A55_C0_DBGBCR1_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
		10	Unlinked VMID and Context ID match.
		11	Linked VMID and Context ID match.
		12	Unlinked CONTEXTIDR_EL2 match (ARMv8.1).
		13	Linked CONTEXTIDR_EL2 match (ARMv8.1).
		14	Unlinked Full Context ID match (ARMv8.1).
		15	Linked Full Context ID match (ARMv8.1).
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked address matching breakpoints, this specifies the index of the Context-matching breakpoint linked to. For all other breakpoint types this field is ignored and reads of the register return an UNKNOWN value. This field is ignored when the value of DBGBCR<n>_EL1.E is 0.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the HMC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information, including the effect of programming the fields to a reserved set of values, see .	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see DBGBCR<n>_EL1.SSC description.	
12:9 (R/W)	RES0_DBGBCR1_EL1_12_9	0.. Reserved, RES0.	

Table 48-656: A55_C0_DBGBCR1_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
8:5 (R/W)	BAS	BAS.. Byte address select. Defines which half-words an address-matching breakpoint matches, regardless of the instruction set and Execution state. In an AArch64-only implementation, this field is reserved, RES1. The permitted values depend on the breakpoint type. For Address match breakpoints in either AArch32 or AArch64 state, the permitted values are: BAS Match instruction at Constraint for debuggers 0011 DBGBVR<n>_EL1 Use for T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for T32 instructions. 1111 DBGBVR<n>_EL1 Use for A64 and A32 instructions. All other values are reserved. For more information, see . For Address mismatch breakpoints in an AArch32 stage 1 translation regime, the permitted values are: BAS Step instruction at Constraint for debuggers 0000 - Use for a match anywhere breakpoint. 0011 DBGBVR<n>_EL1 Use for stepping T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for stepping T32 instructions. 1111 DBGBVR<n>_EL1 Use for stepping A64 and A32 instructions. For more information, see . For Context matching breakpoints, this field is RES1 and ignored.	
4:3 (R/W)	RES0_DBGBCR1_EL1_4_3	0.. Reserved, RES0.	
2:1 (R/W)	PMC	PMC.. Privilege mode control. Determines the Exception level or levels at which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and HMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see the DBGBCR<n>_EL1.SSC description.	
0 (R/W)	E	E.. Enable breakpoint DBGBVR<n>_EL1. Possible values are: 0 Breakpoint disabled. 1 Breakpoint enabled.	
		0	Breakpoint disabled.
		1	Breakpoint enabled.

Debug Breakpoint Control Registers.

Holds control information for a breakpoint. Forms breakpoint n together with value register DBGBVR2_EL1.

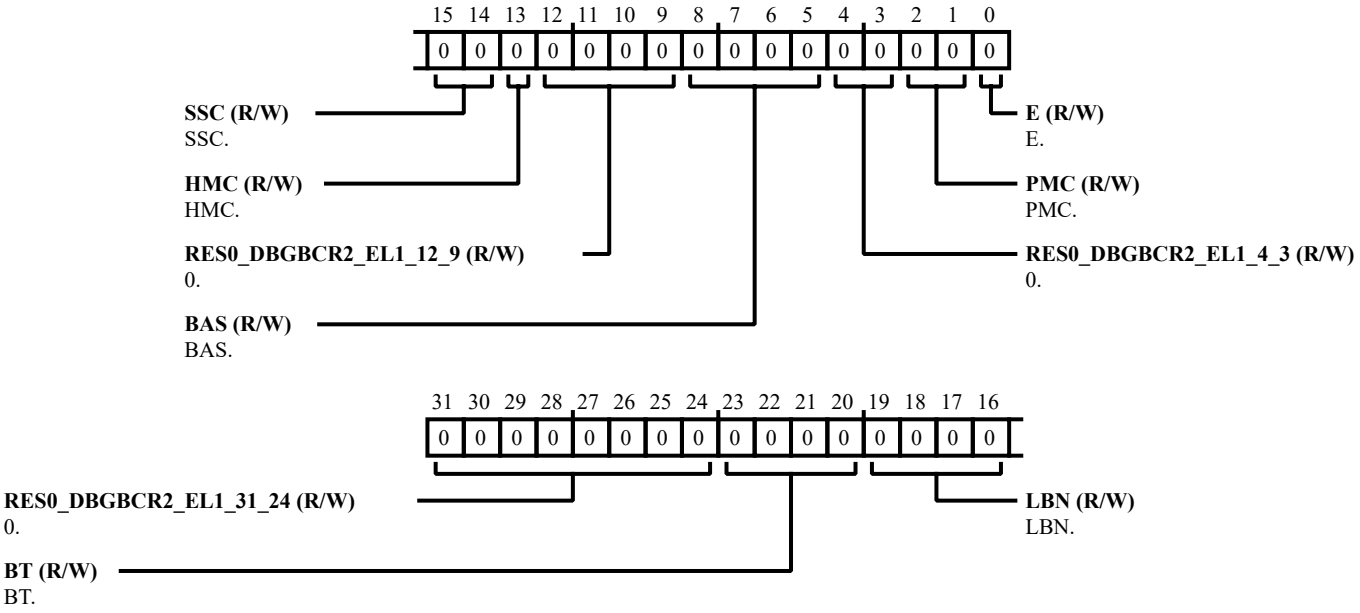

Figure 48-650: A55_C0_DBGBCR2_EL1 Register Diagram

Table 48-657: A55_C0_DBGBCR2_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:24 (R/W)	RES0_DBGBCR2_EL1_31_24	0.. Reserved, RES0.

		12	Unlinked CONTEXTIDR_EL2 match (ARMv8.1).
		13	Linked CONTEXTIDR_EL2 match (ARMv8.1).
		14	Unlinked Full Context ID match (ARMv8.1).
		15	Linked Full Context ID match (ARMv8.1).
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked address matching breakpoints, this specifies the index of the Context-matching breakpoint linked to. For all other breakpoint types this field is ignored and reads of the register return an UNKNOWN value. This field is ignored when the value of DBGBCR<n>_EL1.E is 0.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the HMC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information, including the effect of programming the fields to a reserved set of values, see .	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see DBGBCR<n>_EL1.SSC description.	
12:9 (R/W)	RES0_DBGBCR5_EL1_12_9	0.. Reserved, RES0.	

Table 48-660: A55_C0_DBGBCR5_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
8:5 (R/W)	BAS	BAS.. Byte address select. Defines which half-words an address-matching breakpoint matches, regardless of the instruction set and Execution state. In an AArch64-only implementation, this field is reserved, RES1. The permitted values depend on the breakpoint type. For Address match breakpoints in either AArch32 or AArch64 state, the permitted values are: BAS Match instruction at Constraint for debuggers 0011 DBGBVR<n>_EL1 Use for T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for T32 instructions. 1111 DBGBVR<n>_EL1 Use for A64 and A32 instructions. All other values are reserved. For more information, see . For Address mismatch breakpoints in an AArch32 stage 1 translation regime, the permitted values are: BAS Step instruction at Constraint for debuggers 0000 - Use for a match anywhere breakpoint. 0011 DBGBVR<n>_EL1 Use for stepping T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for stepping T32 instructions. 1111 DBGBVR<n>_EL1 Use for stepping A64 and A32 instructions. For more information, see . For Context matching breakpoints, this field is RES1 and ignored.
4:3 (R/W)	RES0_DBGBCR5_EL1_4_3	0.. Reserved, RES0.
2:1 (R/W)	PMC	PMC.. Privilege mode control. Determines the Exception level or levels at which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and HMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see the DBGBCR<n>_EL1.SSC description.
0 (R/W)	E	E.. Enable breakpoint DBGBVR<n>_EL1. Possible values are: 0 Breakpoint disabled. 1 Breakpoint enabled. 0 Breakpoint disabled. 1 Breakpoint enabled.

Debug Claim Tag Clear register.

Used by software to read the values of the CLAIM tag bits, and to clear these bits to 0.

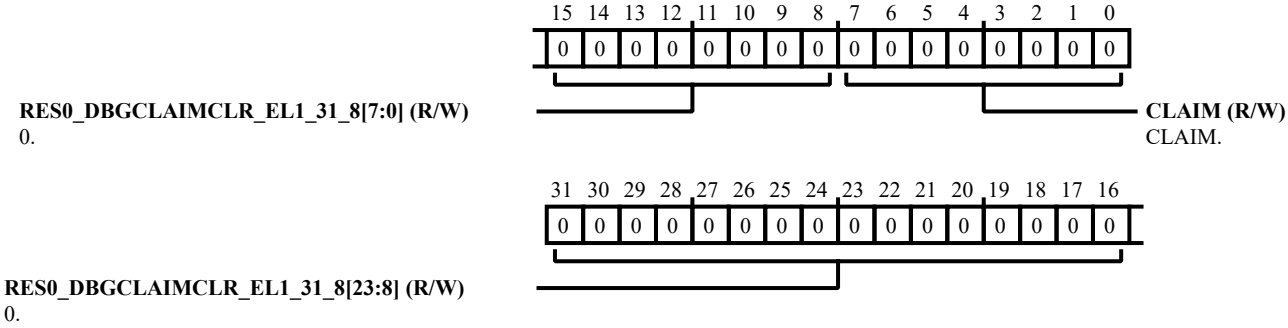

Figure 48-654: A55_C0_DBGCLAIMCLR_EL1 Register Diagram

Table 48-661: A55_C0_DBGCLAIMCLR_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_DBGCLAIMCLR_EL1_31_8	0.. Reserved, RAZ/SBZ. Software can rely on these bits reading as zero, and must use a should-be-zero policy on writes. Implementations must ignore writes.
7:0 (R/W)	CLAIM	CLAIM.. Read or clear CLAIM tag bits. Reading this field returns the current value of the CLAIM tag bits. Writing a 1 to one of these bits clears the corresponding CLAIM tag bit to 0. This is an indirect write to the CLAIM tag bits. A single write operation can clear multiple CLAIM tag bits to 0. Writing 0 to one of these bits has no effect. A cold reset clears the CLAIM tag bits to 0.

Debug Claim Tag Set register.

Used by software to set the CLAIM tag bits to 1.

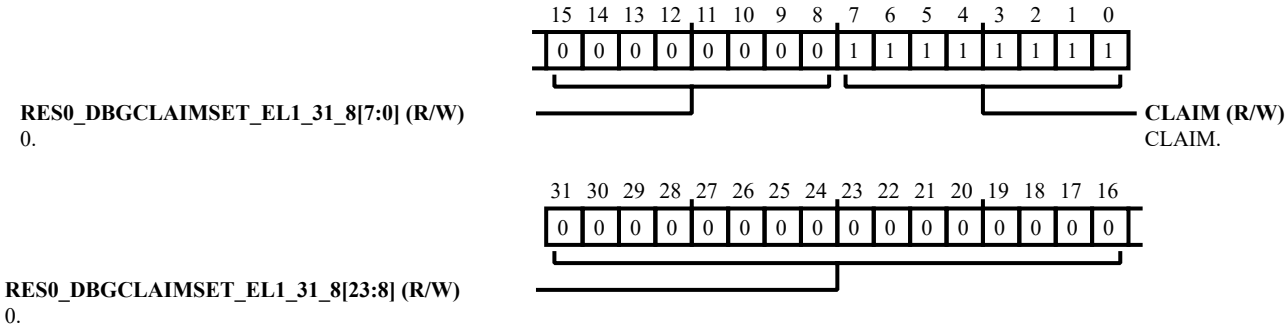

Figure 48-655: A55_C0_DBGCLAIMSET_EL1 Register Diagram

Table 48-662: A55_C0_DBGCLAIMSET_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_DBGCLAIM-SET_EL1_31_8	0.. Reserved, RAZ/SBZ. Software can rely on these bits reading as zero, and must use a should-be-zero policy on writes. Implementations must ignore writes.
7:0 (R/W)	CLAIM	CLAIM.. Set CLAIM tag bits. RAO. Writing a 1 to one of these bits sets the corresponding CLAIM tag bit to 1. This is an indirect write to the CLAIM tag bits. A single write operation can set multiple CLAIM tag bits to 1. Writing 0 to one of these bits has no effect. A cold reset clears the CLAIM tag bits to 0.

Debug Data Transfer Register, Receive.

Transfers data from an external debugger to the PE. For example, it is used by a debugger transferring commands and data to a debug target. It is a component of the Debug Communications Channel.

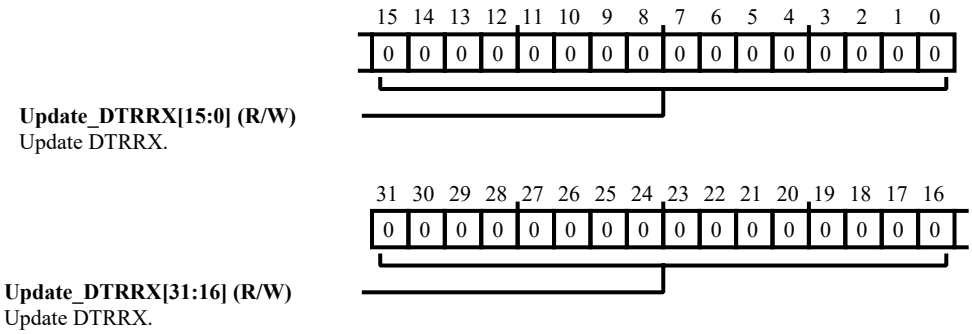

Figure 48-656: A55_C0_DBGDTRRX_EL0 Register Diagram

Table 48-663: A55_C0_DBGDTRRX_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	UPDATE_DTRRX	Update DTRRX.. Update DTRRX. If RXfull is set to 0, then writes to this register update the value in DTRRX and set RXfull to 1. Reads of this register return the last value written to DTRRX and do not change RXfull. For the full behavior of the Debug Communications Channel, see .

Debug Data Transfer Register, Transmit.

Transfers data from the PE to an external debugger. For example, it is used by a debug target to transfer data to the debugger. It is a component of the Debug Communication Channel.

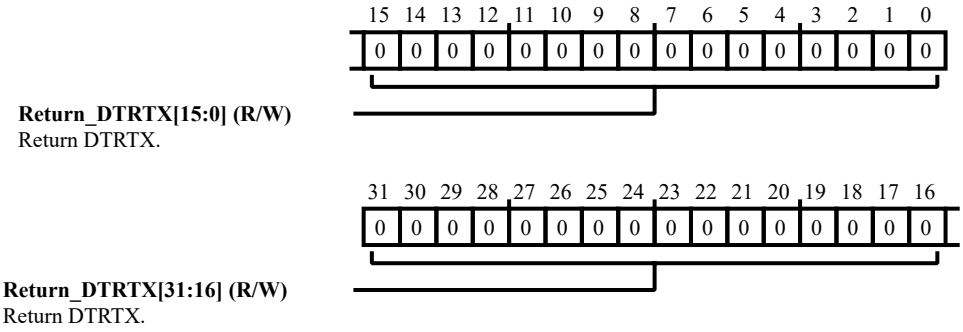

Figure 48-657: A55_C0_DBGDTRTX_EL0 Register Diagram

Table 48-664: A55_C0_DBGDTRTX_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	RETURN_DTRTX	Return DTRTX.. Return DTRTX. If TXfull is set to 1, then reads of this register return the value in DTRTX and clear TXfull to 0. Writes of this register update the value in DTRTX and do not change TXfull. For the full behavior of the Debug Communications Channel, see .

Debug Watchpoint Control Registers.

Holds control information for a watchpoint. Forms watchpoint n together with value register DBGWVR0_EL1.

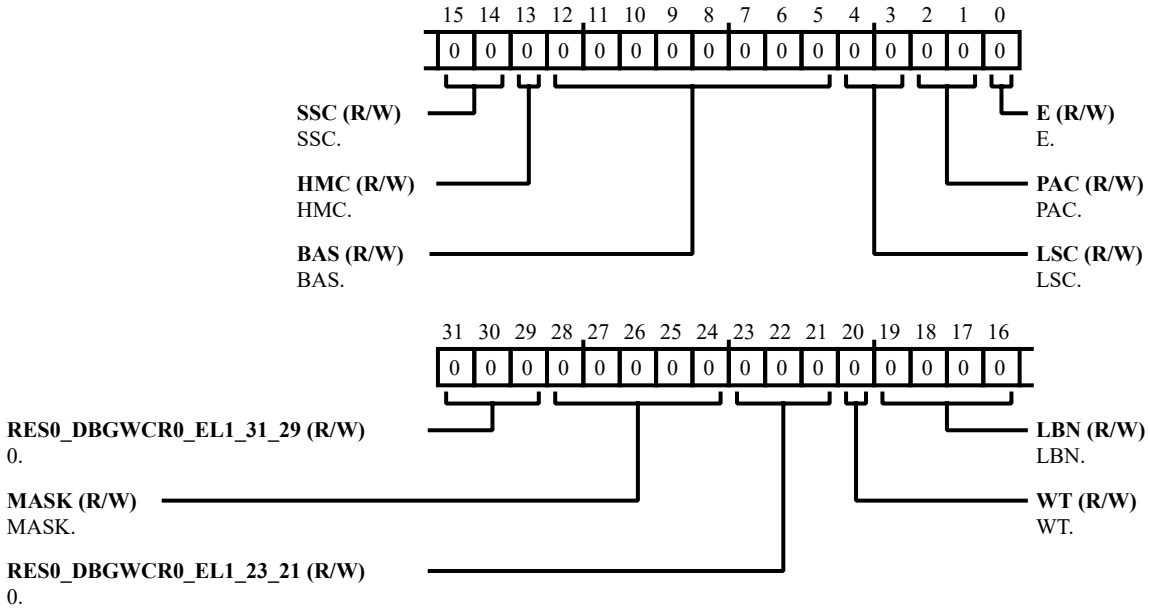

Figure 48-658: A55_C0_DBGWCR0_EL1 Register Diagram

Table 48-665: A55_C0_DBGWCR0_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/W)	RES0_DBGWCR0_EL1_31_29	0.. Reserved, RES0.	
28:24 (R/W)	MASK	MASK.. Address mask. Only objects up to 2GB can be watched using a single mask. 00000 No mask. 00001 Reserved. 00010 Reserved. If programmed with a reserved value, a watchpoint must behave as if either: MASK has been programmed with a defined value, which might be 0 (no mask), other than for a direct read of DBGWCRn_EL1. The watchpoint is disabled. Software must not rely on this property because the behavior of reserved values might change in a future revision of the architecture. Other values mask the corresponding number of address bits, from 0b00011 masking 3 address bits (0x00000007 mask for address) to 0b11111 masking 31 address bits (0x7FFFFFFF mask for address).	
		0	No mask.
		1	Reserved.
		2	Reserved.

Table 48-665: A55_C0_DBGWCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:21 (R/W)	RES0_DBGWCR0_EL1_23_21	0.. Reserved, RES0.	
20 (R/W)	WT	WT.. Watchpoint type. Possible values are: 0 Unlinked data address match. 1 Linked data address match.	
		0	Unlinked data address match.
		1	Linked data address match.
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked data address watchpoints, this specifies the index of the Context-matching breakpoint linked to.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the HMC and PAC fields.	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and PAC fields.	
12:5 (R/W)	BAS	BAS.. Byte address select. Each bit of this field selects whether a byte from within the word or double-word addressed by DBGWVR<n>_EL1 is being watched. BAS Description xxxxxxx1 Match byte at DBGWVR<n>_EL1 xxxxxx1x Match byte at DBGWVR<n>_EL1+1 xxxxx1xx Match byte at DBGWVR<n>_EL1+2 xxxx1xxx Match byte at DBGWVR<n>_EL1+3 In cases where DBGWVR<n>_EL1 addresses a double-word: BAS Description, if DBGWVR<n>_EL1[2] == 0 xxx1xxxx Match byte at DBGWVR<n>_EL1+4 xx1xxxxx Match byte at DBGWVR<n>_EL1+5 x1xxxxxx Match byte at DBGWVR<n>_EL1+6 1xxxxxxx Match byte at DBGWVR<n>_EL1+7 If DBGWVR<n>_EL1[2] == 1, only BAS[3:0] is used. ARM deprecates setting DBGWVR<n>_EL1[2] == 1. The valid values for BAS are non-zero binary number all of whose set bits are contiguous. All other values are reserved and must not be used by software. See.	

Table 48-665: A55_C0_DBGWCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
4:3 (R/W)	LSC	LSC.. Load/store control. This field enables watchpoint matching on the type of access being made. Possible values of this field are: 01 Match instructions that load from a watchpointed address. 10 Match instructions that store to a watchpointed address. 11 Match instructions that load from or store to a watchpointed address. All other values are reserved, but must behave as if the watchpoint is disabled. Software must not rely on this property as the behavior of reserved values might change in a future revision of the architecture.	
		1	Match instructions that load from a watchpointed address.
		2	Match instructions that store to a watchpointed address.
		3	Match instructions that load from or store to a watchpointed address.
2:1 (R/W)	PAC	PAC.. Privilege of access control. Determines the Exception level or levels at which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and HMC fields.	
0 (R/W)	E	E.. Enable watchpoint n. Possible values are: 0 Watchpoint disabled. 1 Watchpoint enabled.	
		0	Watchpoint disabled.
		1	Watchpoint enabled.

Debug Watchpoint Control Registers.

Holds control information for a watchpoint. Forms watchpoint n together with value register DBGWVR1_EL1.

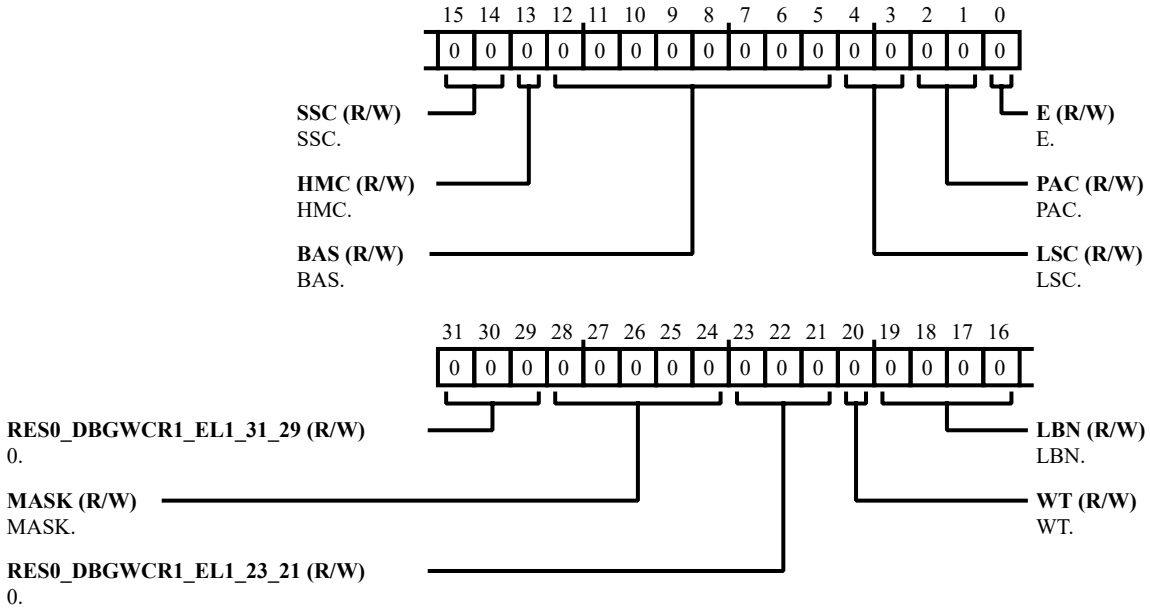

Figure 48-659: A55_C0_DBGWCR1_EL1 Register Diagram

Table 48-666: A55_C0_DBGWCR1_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/W)	RES0_DBGWCR1_EL1_31_29	0.. Reserved, RES0.	
28:24 (R/W)	MASK	MASK.. Address mask. Only objects up to 2GB can be watched using a single mask. 00000 No mask. 00001 Reserved. 00010 Reserved. If programmed with a reserved value, a watchpoint must behave as if either: MASK has been programmed with a defined value, which might be 0 (no mask), other than for a direct read of DBGWCRn_EL1. The watchpoint is disabled. Software must not rely on this property because the behavior of reserved values might change in a future revision of the architecture. 		3	Match instructions that load from or store to a watchpointed address.
2:1 (R/W)	PAC	PAC.. Privilege of access control. Determines the Exception level or levels at which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and HMC fields.	
0 (R/W)	E	E.. Enable watchpoint n. Possible values are: 0 Watchpoint disabled. 1 Watchpoint enabled.	
		0	Watchpoint disabled.
		1	Watchpoint enabled.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR0_EL1.

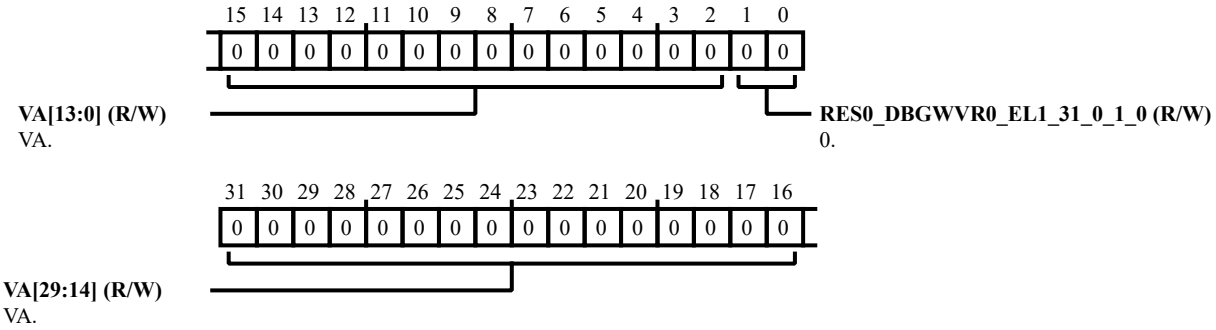

Figure 48-662: A55_C0_DBGWVR0_EL1_31_0 Register Diagram

Table 48-669: A55_C0_DBGWVR0_EL1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.
1:0 (R/W)	RES0_DBGWVR0_EL1_31_0_1_0	0.. Reserved, RES0.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR0_EL1.

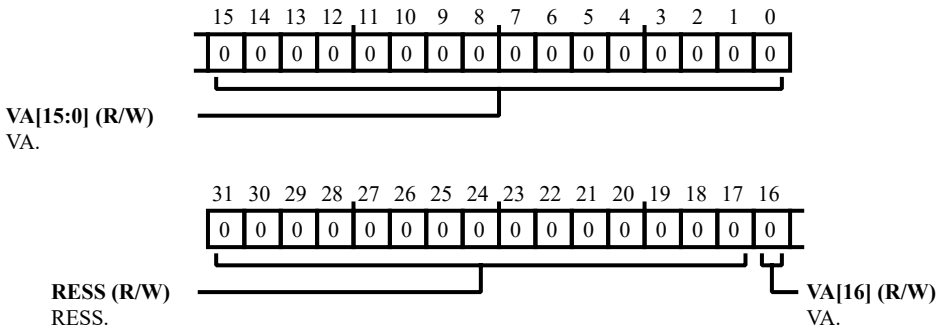

Figure 48-663: A55_C0_DBGWVR0_EL1_63_32 Register Diagram

Table 48-670: A55_C0_DBGWVR0_EL1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:17 (R/W)	RESS	RESS.. Reserved, Sign extended. Hardware and software must treat this field as RES0 if bit[48] is 0 or RES0, and as RES1 if bit[48] is 1. Hardware always ignores the value of these bits and it is IMPLEMENTATION DEFINED whether: The bits are hardwired to a copy of bit [48], meaning writes to these bits are ignored, and reads to the bits always return the hardwired value. The value in those bits can be written, and reads will return the last value written. The value held in those bits is ignored by hardware.
16:0 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR1_EL1.

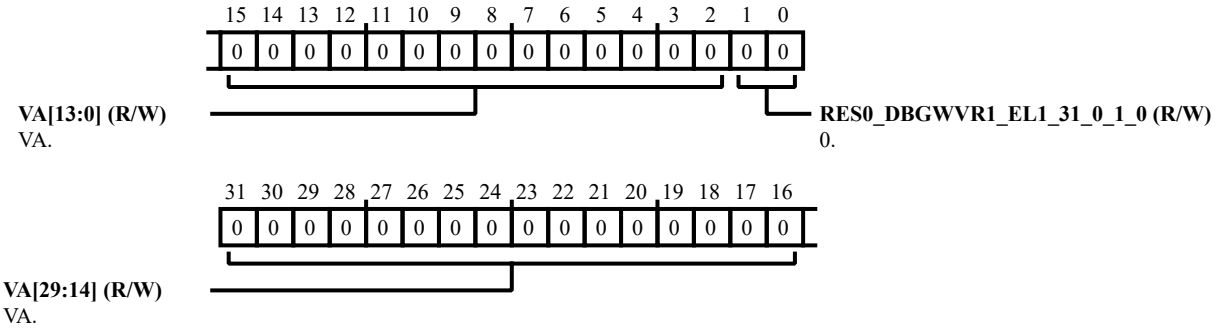

Figure 48-664: A55_C0_DBGWVR1_EL1_31_0 Register Diagram

Table 48-671: A55_C0_DBGWVR1_EL1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.
1:0 (R/W)	RES0_DBGWVR1_EL1_31_0_1_0	0.. Reserved, RES0.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR1_EL1.

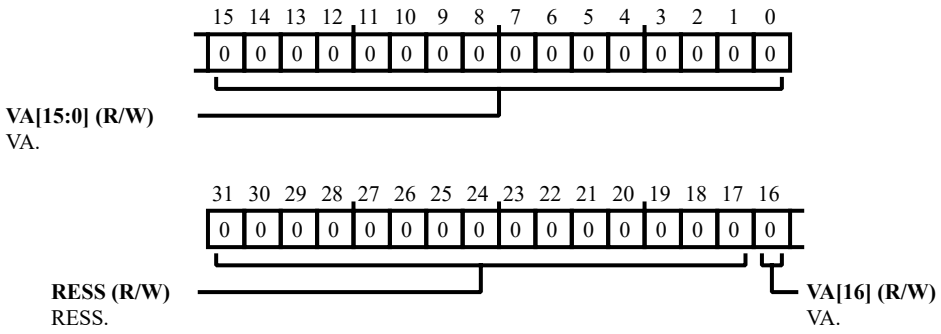

Figure 48-665: A55_C0_DBGWVR1_EL1_63_32 Register Diagram

Table 48-672: A55_C0_DBGWVR1_EL1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:17 (R/W)	RESS	RESS.. Reserved, Sign extended. Hardware and software must treat this field as RES0 if bit[48] is 0 or RES0, and as RES1 if bit[48] is 1. Hardware always ignores the value of these bits and it is IMPLEMENTATION DEFINED whether: The bits are hardwired to a copy of bit [48], meaning writes to these bits are ignored, and reads to the bits always return the hardwired value. The value in those bits can be written, and reads will return the last value written. The value held in those bits is ignored by hardware.
16:0 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR2_EL1.

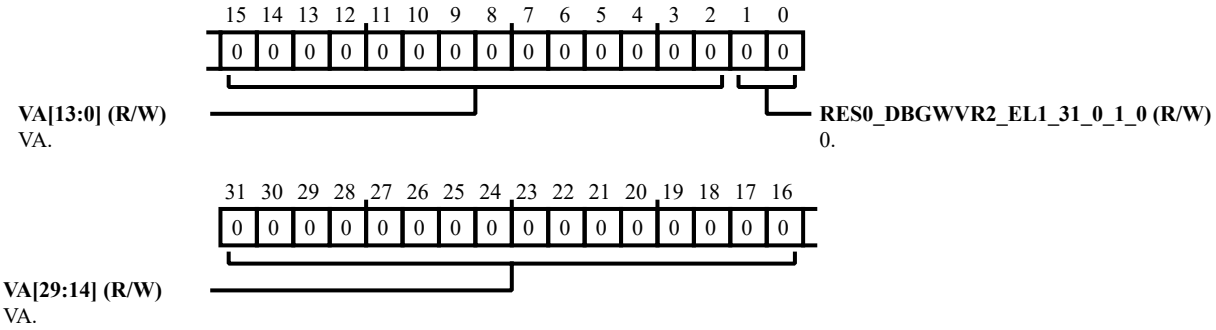

Figure 48-666: A55_C0_DBGWVR2_EL1_31_0 Register Diagram

Table 48-673: A55_C0_DBGWVR2_EL1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.
1:0 (R/W)	RES0_DBGWVR2_EL1_31_0_1_0	0.. Reserved, RES0.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR2_EL1.

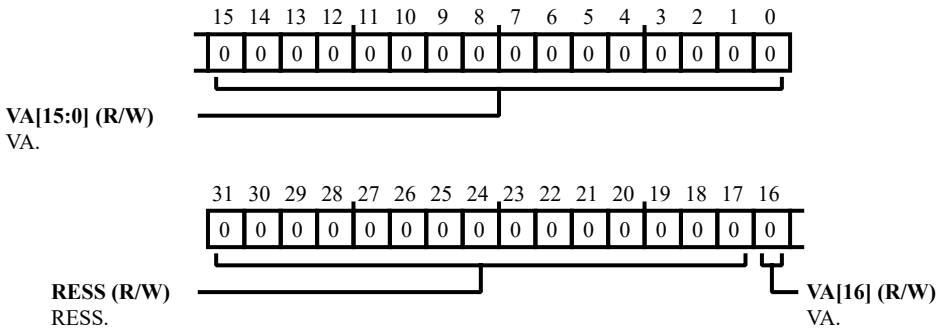

Figure 48-667: A55_C0_DBGWVR2_EL1_63_32 Register Diagram

Table 48-674: A55_C0_DBGWVR2_EL1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:17 (R/W)	RESS	RESS.. Reserved, Sign extended. Hardware and software must treat this field as RES0 if bit[48] is 0 or RES0, and as RES1 if bit[48] is 1. Hardware always ignores the value of these bits and it is IMPLEMENTATION DEFINED whether: The bits are hardwired to a copy of bit [48], meaning writes to these bits are ignored, and reads to the bits always return the hardwired value. The value in those bits can be written, and reads will return the last value written. The value held in those bits is ignored by hardware.
16:0 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR3_EL1.

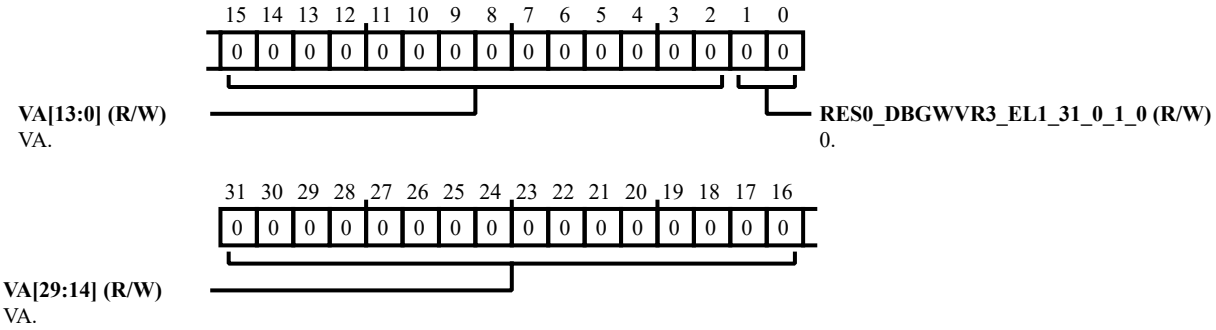

Figure 48-668: A55_C0_DBGWVR3_EL1_31_0 Register Diagram

Table 48-675: A55_C0_DBGWVR3_EL1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.
1:0 (R/W)	RES0_DBGWVR3_EL1_31_0_1_0	0.. Reserved, RES0.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR3_EL1.

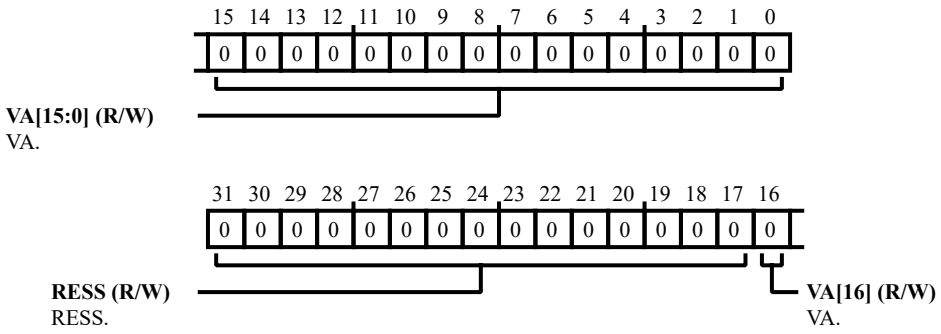

Figure 48-669: A55_C0_DBGWVR3_EL1_63_32 Register Diagram

Table 48-676: A55_C0_DBGWVR3_EL1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:17 (R/W)	RESS	RESS.. Reserved, Sign extended. Hardware and software must treat this field as RES0 if bit[48] is 0 or RES0, and as RES1 if bit[48] is 1. Hardware always ignores the value of these bits and it is IMPLEMENTATION DEFINED whether: The bits are hardwired to a copy of bit [48], meaning writes to these bits are ignored, and reads to the bits always return the hardwired value. The value in those bits can be written, and reads will return the last value written. The value held in those bits is ignored by hardware.
16:0 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.

External Debug Context ID Sample Register.

Contains the sampled value of the Context ID, captured on reading the low half of EDPCSR.

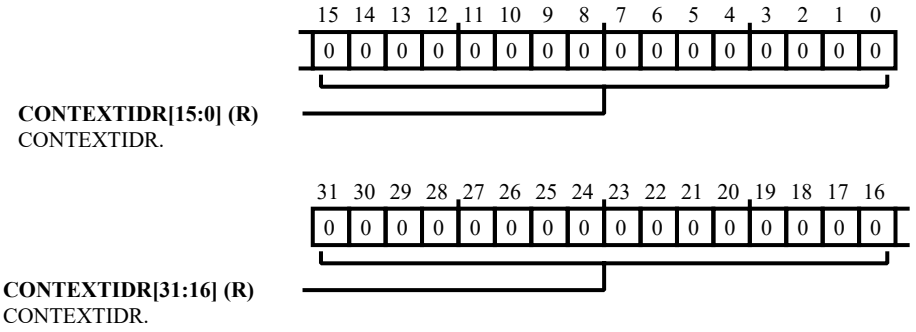

Figure 48-670: A55_C0_EDCIDSR Register Diagram

Table 48-677: A55_C0_EDCIDSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/NW)	CONTEXTIDR	CONTEXTIDR.. The sampled value of the Context ID, captured on reading the low half of EDPCSR. If EL1 is using AArch64, the Context ID is held in CONTEXTIDR_EL1. If EL1 is using AArch32, the Context ID is held in CONTEXTIDR. If EL3 is implemented and is using AArch32 then CONTEXTIDR is a Banked register, and EDCIDSR samples the current Banked copy of CONTEXTIDR.

External Debug Exception Catch Control Register.

Controls Exception Catch debug events.

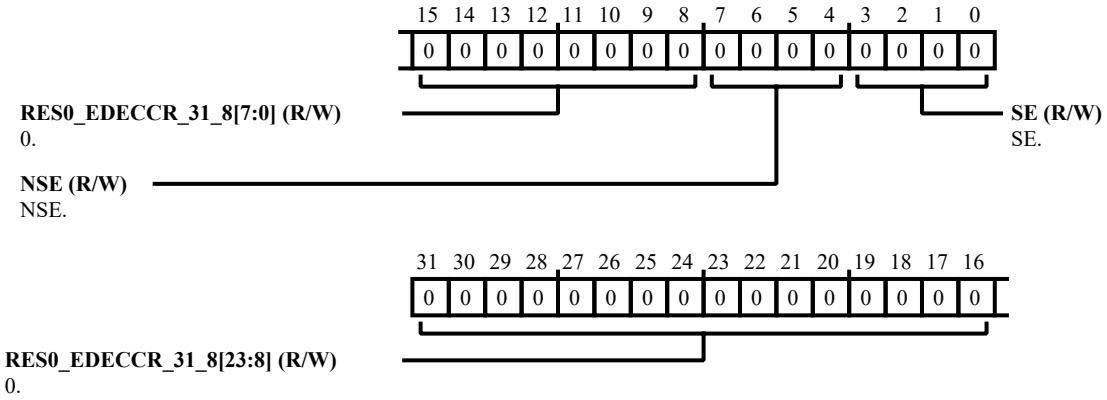

Figure 48-671: A55_C0_EDECCR Register Diagram

Table 48-678: A55_C0_EDECCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:8 (R/W)	RES0_EDECCR_31_8	0.. Reserved, RES0.	
7:4 (R/W)	NSE	NSE.. Coarse-grained Non-secure exception catch. If EL3 and EL2 are not implemented and the PE behaves as if SCR_EL3.NS is set to 0, this field is reserved, RES0. Otherwise, possible values for this field are: 0000 Exception Catch debug event disabled for Non-secure Exception levels. 0010 Exception Catch debug event enabled for Non-secure EL1. 0100 Exception Catch debug event enabled for Non-secure EL2. 0110 Exception Catch debug event enabled for Non-secure EL1 and EL2. All other values are reserved. A value that enables an Exception Catch debug event for an Exception level that is not implemented is reserved. If this field is programmed with a reserved value then: The PE behaves as if it is programmed with a defined value, other than for a read of EDECCR. The value returned for NSE by a read of EDECCR is UNKNOWN.	
		0	Exception Catch debug event disabled for Non-secure Exception levels.
		2	Exception Catch debug event enabled for Non-secure EL1.
		4	Exception Catch debug event enabled for Non-secure EL2.
		6	Exception Catch debug event enabled for Non-secure EL1 and EL2.

Table 48-678: A55_C0_EDECCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	SE	SE.. Coarse-grained Secure exception catch. If EL3 is not implemented and the PE behaves as if SCR_EL3.NS is set to 1, this field is reserved, RES0. Otherwise, possible values for this field are: 0000 Exception Catch debug event disabled for Secure Exception levels. 0010 Exception Catch debug event enabled for Secure EL1. 1000 Exception Catch debug event enabled for Secure EL3. 1010 Exception Catch debug event enabled for Secure EL1 and EL3. All other values are reserved. A value that enables an Exception Catch debug event for an Exception level that is not implemented is reserved. If this field is programmed with a reserved value then: The PE behaves as if it is programmed with a defined value, other than for a read of EDECCR. The value returned for SE by a read of EDECCR is UNKNOWN.	
		0	Exception Catch debug event disabled for Secure Exception levels.
		2	Exception Catch debug event enabled for Secure EL1.
		8	Exception Catch debug event enabled for Secure EL3.
		10	Exception Catch debug event enabled for Secure EL1 and EL3.

External Debug Event Status Register.

Indicates the status of internally pending Halting debug events.

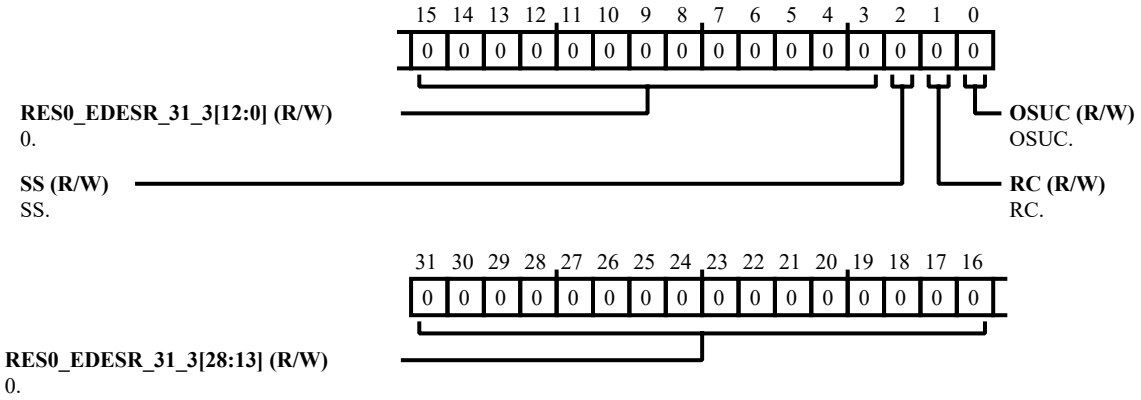

Figure 48-672: A55_C0_EDESR Register Diagram

Table 48-679: A55_C0_EDESR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:3 (R/W)	RES0_EDESR_31_3	0.. Reserved, RES0.	
2 (R/W)	SS	SS.. Halting step debug event pending. Possible values of this field are: 0 Reading this means that a Halting step debug event is not pending. Writing this means no action. 1 Reading this means that a Halting step debug event is pending. Writing this clears the pending Halting step debug event.	
		0	Reading this means that a Halting step debug event is not pending. Writing this means no action.
		1	Reading this means that a Halting step debug event is pending. Writing this clears the pending Halting step debug event.
1 (R/W)	RC	RC.. Reset Catch debug event pending. Possible values of this field are: 0 Reading this means that a Reset Catch debug event is not pending. Writing this means no action. 1 Reading this means that a Reset Catch debug event is pending. Writing this clears the pending Reset Catch debug event.	
		0	Reading this means that a Reset Catch debug event is not pending. Writing this means no action.
		1	Reading this means that a Reset Catch debug event is pending. Writing this clears the pending Reset Catch debug event.

Table 48-679: A55_C0_EDESR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	OSUC	OSUC.. OS Unlock Catch debug event pending. Possible values of this field are: 0 Reading this means that an OS Unlock Catch debug event is not pending. Writing this means no action. 1 Reading this means that an OS Unlock Catch debug event is pending. Writing this clears the pending OS Unlock Catch debug event.	
		0	Reading this means that an OS Unlock Catch debug event is not pending. Writing this means no action.
		1	Reading this means that an OS Unlock Catch debug event is pending. Writing this clears the pending OS Unlock Catch debug event.

External Debug Integration mode Control register.

Enables the external debug to switch from its default mode into integration mode, where test software can control directly the inputs and outputs of the PE, for integration testing or topology detection.

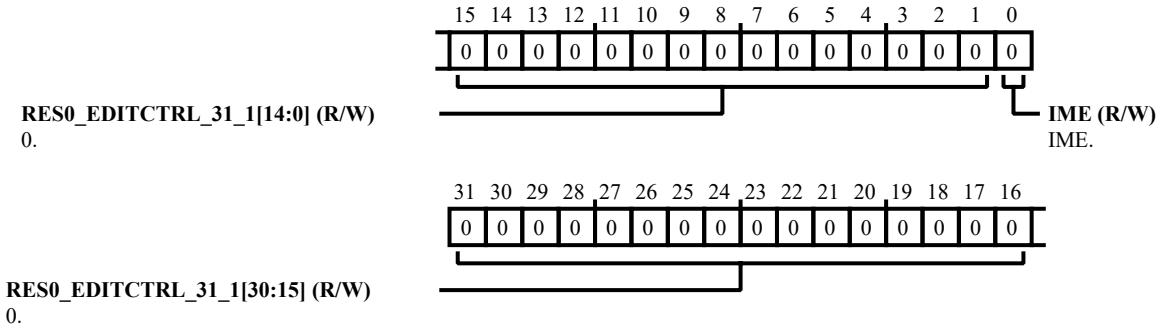

Figure 48-673: A55_C0_EDITCTRL Register Diagram

Table 48-680: A55_C0_EDITCTRL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_EDITCTRL_31_1	0.. Reserved, RES0.	
0 (R/W)	IME	IME.. Integration mode enable. When IME == 1, the device reverts to an integration mode to enable integration testing or topology detection. The integration mode behavior is IMPLEMENTATION DEFINED. 0 Normal operation. 1 Integration mode enabled.	
		0	Normal operation.
		1	Integration mode enabled.

External Debug Instruction Transfer Register.

Used in Debug state for passing instructions to the PE for execution.

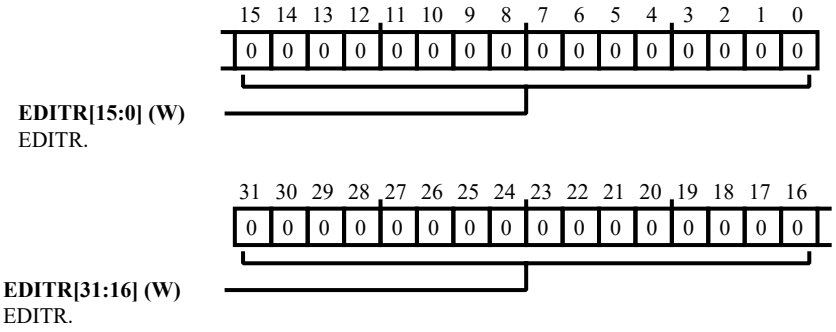

Figure 48-674: A55_C0_EDITR Register Diagram

Table 48-681: A55_C0_EDITR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (RX/W)	EDITR	EDITR.. Used in Debug state for passing instructions to the processor for execution.

External Debug Power/Reset Control Register.

Controls the PE functionality related to powerup, reset, and powerdown.

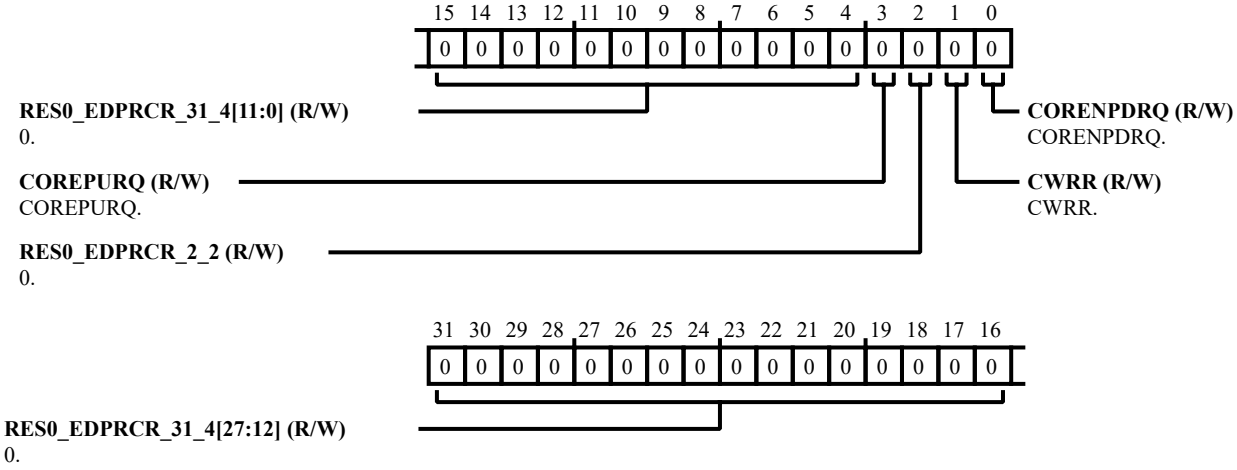

Figure 48-675: A55_C0_EDPRCR Register Diagram

Table 48-682: A55_C0_EDPRCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/W)	RES0_EDPRCR_31_4	0.. Reserved, RES0.	
3 (R/W)	COREPURQ	COREPURQ.. Core powerup request. Allows a debugger to request that the power controller power up the core, enabling access to the debug register in the Core power domain. The actions on writing to this bit are: 0 Do not request power up of the Core power domain. 1 Request power up of the Core power domain, and emulation of powerdown. In an implementation that includes the recommended external debug interface, this bit drives the DBGPWRUPREQ signal. Typically, this request is passed to an external power controller. This means that whether a request causes power up is dependent on the IMPLEMENTATION DEFINED nature of the system. This field is in the Debug power domain and can be read and written when the Core power domain is powered off. On an External debug reset this field resets to 0. The power controller must not allow the Core power domain to switch off while this bit is one.	
		0	Do not request power up of the Core power domain.
		1	Request power up of the Core power domain, and emulation of powerdown.
2 (R/W)	RES0_EDPRCR_2_2	0.. Reserved, RES0.	

Table 48-682: A55_C0_EDPRCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/W)	CWRR	CWRR.. Warm reset request. Write only bit that reads as zero. The actions on writing to this bit are: 0 No action. 1 Request Warm reset. The PE ignores writes to this bit if any of the following are true: ExternalInvasiveDebugEnabled() == FALSE, EL3 is not implemented, and the implemented Security state is Non-Secure state. External-SecureInvasiveDebugEnabled() == FALSE and one of the following is true:EL3 is implemented.The implemented Security state is Secure state. The Core power domain is either off or in a low-power state where the Core power domain registers cannot be accessed. DoubleLockStatus() == TRUE (OS Double Lock is set). OSLSR.OSLK == 1 (OS lock is locked). In an implementation that includes the recommended external debug interface, this bit drives the DBGRSTREQ signal. Whether a write to this bit initiates a Warm Reset, the extent of the reset is IMPLEMENTATION DEFINED, but must be one of: The request is ignored. Only this PE is Warm reset. This PE and other components of the system, possibly including other PEs, are Warm reset. Although the ARM architecture permits the first option from the above list, ARM recommends that either of the other options is implemented.	
		0	No action.
		1	Request Warm reset.
0 (R/W)	CORENPDRQ	CORENPDRQ.. Core no powerdown request. Requests emulation of powerdown. Possible values of this bit are: 0 If the system responds to a powerdown request, it powers down Core power domain. 1 If the system responds to a powerdown request, it does not powerdown the Core power domain, but instead emulates a powerdown of that domain. This bit is UNKNOWN, and the PE ignores writes to this bit if any of the following are true: The Core power domain is either off or in a low-power state where the Core power domain registers cannot be accessed. DoubleLockStatus() == TRUE (OS Double Lock is set). OSLSR.OSLK == 1 (OS lock is locked).	
		0	If the system responds to a powerdown request, it powers down Core power domain.
		1	If the system responds to a powerdown request, it does not powerdown the Core power domain, but instead emulates a powerdown of that domain.

External Debug Processor Status Register.

Holds information about the reset and powerdown state of the PE.

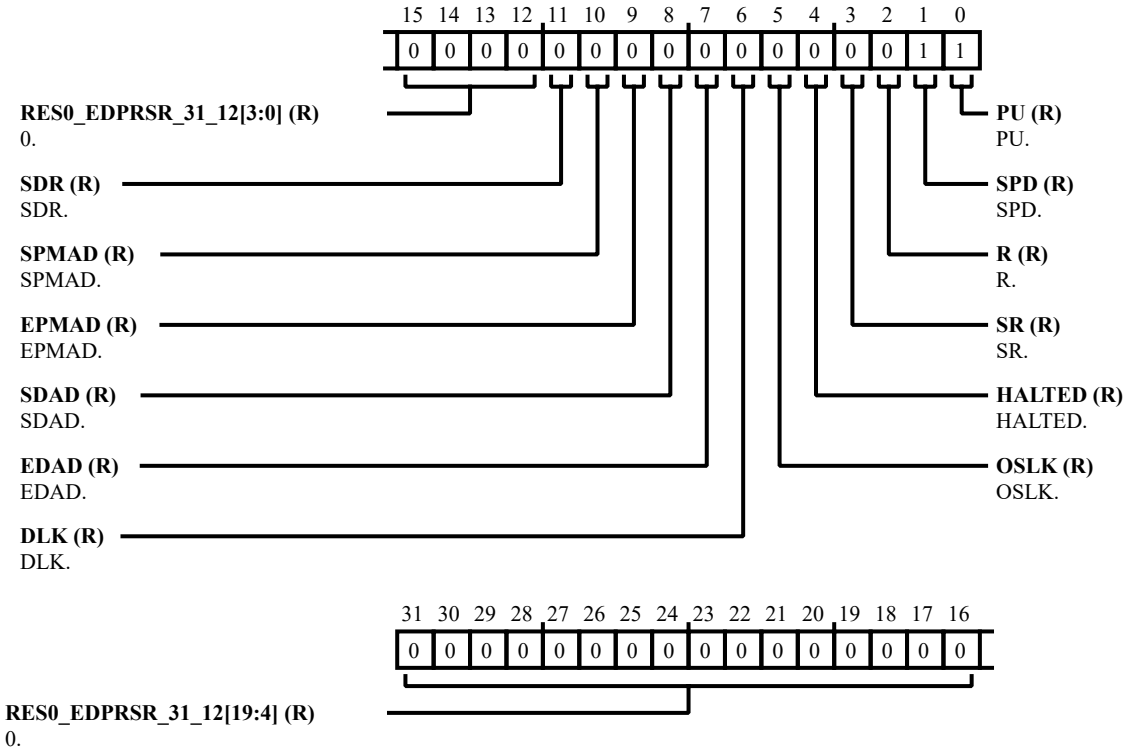

Figure 48-676: A55_C0_EDPRSR Register Diagram

Table 48-683: A55_C0_EDPRSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:12 (R/NW)	RES0_EDPRSR_31_12	0.. Reserved, RES0.

Table 48-683: A55_C0_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
11 (R/NW)	SDR	SDR.. Sticky debug restart. Set to 1 when the PE exits Debug state. This bit is UNKNOWN on reads if any of the following are true: DoubleLockStatus() == TRUE (EDPRSR.DLK == 1). The OS double-lock is locked. EDPRSR.R == 1. The PE is in Reset state. EDPRSR.PU == 0. The Core power domain is powered down. Otherwise permitted values are: 0 The PE has not restarted since EDPRSR was last read. 1 The PE has restarted since EDPRSR was last read. If a reset occurs when the PE is in Debug state, the PE exits Debug state. SDR is UNKNOWN on Warm reset, meaning a debugger must also use the SR bit to determine whether the PE has left Debug state. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs.	
		0	The PE has not restarted since EDPRSR was last read.
		1	The PE has restarted since EDPRSR was last read.
10 (R/NW)	SPMAD	SPMAD.. Sticky EPMAD error. Set to 1 if an external debug interface access to a Performance Monitors register returns an error because AllowExternalPMUAccess() == FALSE. This bit is UNKNOWN on reads if any of the following are true: EDPRSR.{DLK, OSLK, R} is 1. EDPRSR.PU is 0. Otherwise permitted values are: 0 No accesses to the external Performance Monitors registers have failed since EDPRSR was last read. 1 At least one access to the external Performance Monitors registers has failed since EDPRSR was last read. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs. The write to SPMAD is an indirect write to EDPRSR that is a side effect of the access. The indirect write might not occur for a memory-mapped access to the external debug interface.	
		0	No accesses to the external Performance Monitors registers have failed since EDPRSR was last read.
		1	At least one access to the external Performance Monitors registers has failed since EDPRSR was last read.

Table 48-683: A55_C0_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
9 (R/NW)	EPMAD	EPMAD.. External Performance Monitors access disable status. This bit is UNKNOWN on reads if any of EDPRSR.{DLK, OSLK, R} is 1, or EDPRSR.PU is 0. Otherwise permitted values are: 0 External Performance Monitors access enabled. AllowExternalPMUAccess() == TRUE. 1 External Performance Monitors access disabled. AllowExternalPMUAccess() == FALSE. If external performance monitors access is not implemented, EPMAD is RAO.	
		0	External Performance Monitors access enabled. AllowExternalPMUAccess() == TRUE.
		1	External Performance Monitors access disabled. AllowExternalPMUAccess() == FALSE.
8 (R/NW)	SDAD	SDAD.. Sticky EDAD error. Set to 1 if an external debug interface access to a debug register returns an error because AllowExternalDebugAccess() == FALSE. This bit is UNKNOWN on reads if any of the following are true: Either of EDPRSR.{DLK, R} is 1. EDPRSR.PU is 0. EDPRSR.OSLK is 1 and external debug writes to OSLAR_EL1 do not return an error when AllowExternalDebugAccess() == FALSE. Otherwise permitted values are: 0 No accesses to the external debug registers have failed since EDPRSR was last read. 1 At least one access to the external debug registers has failed since EDPRSR was last read. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs. The write to SDAD is an indirect write to EDPRSR that is a side effect of the access. The indirect write might not occur for a memory-mapped access to the external debug interface.	
		0	No accesses to the external debug registers have failed since EDPRSR was last read.
		1	At least one access to the external debug registers has failed since EDPRSR was last read.
7 (R/NW)	EDAD	EDAD.. External debug access disable status. This bit is UNKNOWN on reads if any of the following are true: Either of EDPRSR.{DLK, R} is 1. EDPRSR.PU is 0. EDPRSR.OSLK is 1 and external debug writes to OSLAR_EL1 do not return an error when AllowExternalDebugAccess() == FALSE. Otherwise permitted values are: 0 External debug access enabled. AllowExternalDebugAccess() == TRUE. 1 External debug access disabled. AllowExternalDebugAccess() == FALSE.	
		0	External debug access enabled. AllowExternalDebugAccess() == TRUE.
		1	External debug access disabled. AllowExternalDebugAccess() == FALSE.

Table 48-683: A55_C0_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
6 (R/NW)	DLK	DLK.. OS Double Lock status bit. Returns the result of the pseudocode function DoubleLockStatus(). This bit is UNKNOWN on reads if EDPRSR.PU is 0. Otherwise reads as zero if any of the following are true, that is when DoubleLockStatus() == FALSE: OSDLR_EL1.DLK == 0. DBGPRCR_EL1.CORENPDRQ == 1. The PE is in Debug state. If the Core power domain is powered up and DoubleLockStatus() == TRUE, it is IMPLEMENTATION DEFINED whether: EDPRSR.PU reads as 1, EDPRSR.DLK reads as 1, and EDPRSR.SPD is UNKNOWN. EDPRSR.PU reads as 0, EDPRSR.DLK is UNKNOWN, and EDPRSR.SPD reads as 0. If the Core power domain is powered up and entered reset state with the OS double-lock locked this bit has a CONSTRAINED UNPREDICTABLE value, for more information see EDPRSR.{DLK, SPD, PU} describe whether registers in the Core power domain can be accessed, and whether their state has been lost since the last time the register was read. For more information, see.	
5 (R/NW)	OSLK	OSLK.. OS lock status bit. This bit is UNKNOWN on reads if either of EDPRSR.{DLK, R} is 1 or EDPRSR.PU is 0. A read of this bit returns the value of OSLSR_EL1.OSLK.	
4 (R/NW)	HALTED	HALTED.. Halted status bit. This bit is UNKNOWN on reads if EDPRSR.PU is 0. Otherwise permitted values are: 0 PE in Non-debug state. 1 PE is in Debug state. Because the OS Double Lock is never set when the PE is in Debug state, this bit is always RAZ when EDPRSR.DLK is set to 1.	
		0	PE in Non-debug state.
		1	PE is in Debug state.
3 (R/NW)	SR	SR.. Sticky core reset status bit. This bit is UNKNOWN on reads if EDPRSR.DLK is 1 or EDPRSR.PU is 0. Otherwise permitted values are: 0 The non-debug logic of the PE is not in reset state and has not been reset since the last time EDPRSR was read. 1 The non-debug logic of the PE is in reset state or has been reset since the last time EDPRSR was read. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0 if the non-debug logic of the PE is not in reset state. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs.	
		0	The non-debug logic of the PE is not in reset state and has not been reset since the last time EDPRSR was read.
		1	The non-debug logic of the PE is in reset state or has been reset since the last time EDPRSR was read.

Table 48-683: A55_C0_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/NW)	R	R.. PE reset status bit. This bit is UNKNOWN on reads if either EDPRSR.DLK is 1 or EDPRSR.PU is 0. Otherwise permitted values are: 0 The non-debug logic of the PE is not in reset state. 1 The non-debug logic of the PE is in reset state. If the Core power domain is powered up and entered reset state with the OS double-lock locked this bit has a CONSTRAINED UNPREDICTABLE value, for more information see.	
		0	The non-debug logic of the PE is not in reset state.
		1	The non-debug logic of the PE is in reset state.
1 (R/NW)	SPD	SPD.. Sticky core powerdown status bit. This bit is UNKNOWN on reads if both EDPRSR.DLK and EDPRSR.PU are 1. Otherwise, permitted values are: 0 If EDPRSR.PU is 0, the debugger does not know whether the state of the debug registers in the Core power domain is lost. If the Core power domain is in a powerup state (EDPRSR.PU is 1), the state of the debug registers in the Core power domain has not been lost. 1 The EDPRSR.PU is 1, the state of the debug registers in the Core power domain has been lost. If DoubleLockStatus() == FALSE and the PE is not in the powerdown state, then following a read of EDPRSR, this bit clears to 0. If DoubleLockStatus() == TRUE and the PE is not in the powerdown state, it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs. When the value of EDPRSR.PU is 0 indicating that the Core power domain is in either retention or powerdown state, EDPRSR.SPD is not cleared following a read of EDPRSR, for the IMPLEMENTATION DEFINED behavior see EDPRSR.{DLK, SPD, PU} describe whether registers in the Core power domain can be accessed, and whether their state has been lost since the last time the register was read. For more information, see.	
		0	If EDPRSR.PU is 0, the debugger does not know whether the state of the debug registers in the Core power domain is lost. If the Core power domain is in a powerup state (EDPRSR.PU is 1), the state of the debug registers in the Core power domain has not been lost.
		1	The EDPRSR.PU is 1, the state of the debug registers in the Core power domain has been lost.

Table 48-683: A55_C0_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/NW)	PU	PU.. Core powerup status bit. Indicates whether the Core power domain debug registers can be accessed. The value of EDPRSR.PU is IMPLEMENTATION DEFINED when the Core power domain is powered-up and OS double-lock is locked. See the description of DLK for more information. Otherwise, permitted values are: 0 Core is in a low-power or powerdown state where the debug registers cannot be accessed. 1 Core is in a powerup state where the debug registers can be accessed. If the Core power domain is powered up and entered reset state with the OS double-lock locked this bit has a CONSTRAINED UNPREDICTABLE value, for more information see EDPRSR.{DLK, SPD, PU} describe whether registers in the Core power domain can be accessed, and whether their state has been lost since the last time the register was read. For more information, see.	
		0	Core is in a low-power or powerdown state where the debug registers cannot be accessed.
		1	Core is in a powerup state where the debug registers can be accessed.

External Debug Reserve Control Register.

This register is used to allow imprecise entry to Debug state and clear sticky bits in EDSCR.

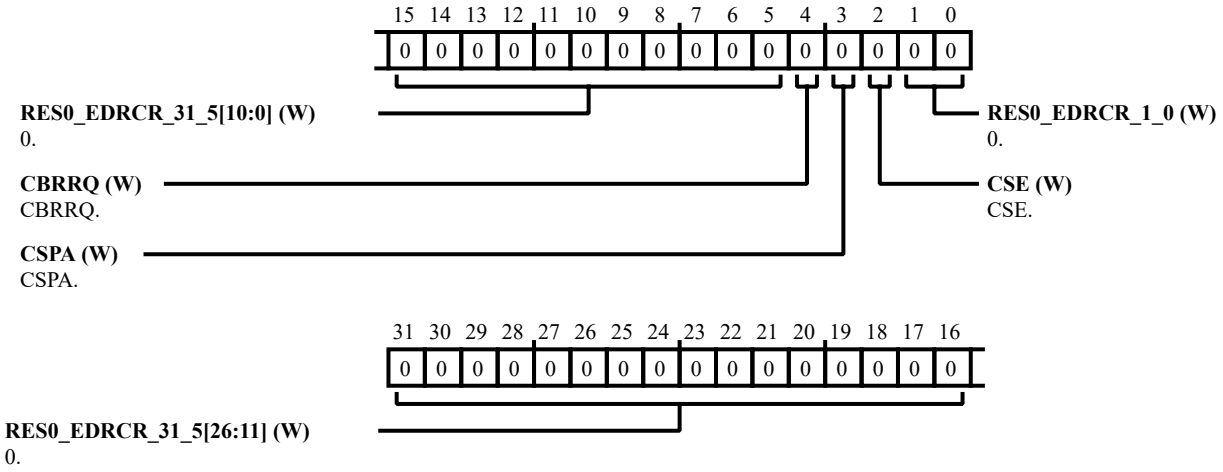

Figure 48-677: A55_C0_EDRCR Register Diagram

Table 48-684: A55_C0_EDRCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:5 (RX/W)	RES0_EDRCR_31_5	0.. Reserved, RES0.	
4 (RX/W)	CBRRQ	CBRRQ.. Allow imprecise entry to Debug state. The actions on writing to this bit are: 0 No action. 1 Allow imprecise entry to Debug state, for example by canceling pending bus accesses. Setting this bit to 1 allows a debugger to request imprecise entry to Debug state. An External Debug Request debug event must be pending before the debugger sets this bit to 1. This feature is optional. If this feature is not implemented, writes to this bit are ignored.	
		0	No action.
		1	Allow imprecise entry to Debug state, for example by canceling pending bus accesses.
3 (RX/W)	CSPA	CSPA.. Clear Sticky Pipeline Advance. This bit is used to clear the EDSCR.PipeAdv bit to 0. The actions on writing to this bit are: 0 No action. 1 Clear the EDSCR.PipeAdv bit to 0.	
		0	No action.
		1	Clear the EDSCR.PipeAdv bit to 0.

Table 48-684: A55_C0_EDRCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (RX/W)	CSE	CSE.. Clear Sticky Error. Used to clear the EDSCR cumulative error bits to 0. The actions on writing to this bit are: 0 No action. 1 Clear the EDSCR.{TXU, RXO, ERR} bits, and, if the PE is in Debug state, the EDSCR.ITO bit, to 0.	
		0	No action.
		1	Clear the EDSCR.{TXU, RXO, ERR} bits, and, if the PE is in Debug state, the EDSCR.ITO bit, to 0.
1:0 (RX/W)	RES0_EDRCR_1_0	0.. Reserved, RES0.	

External Debug Status and Control Register.

Main control register for the debug implementation.

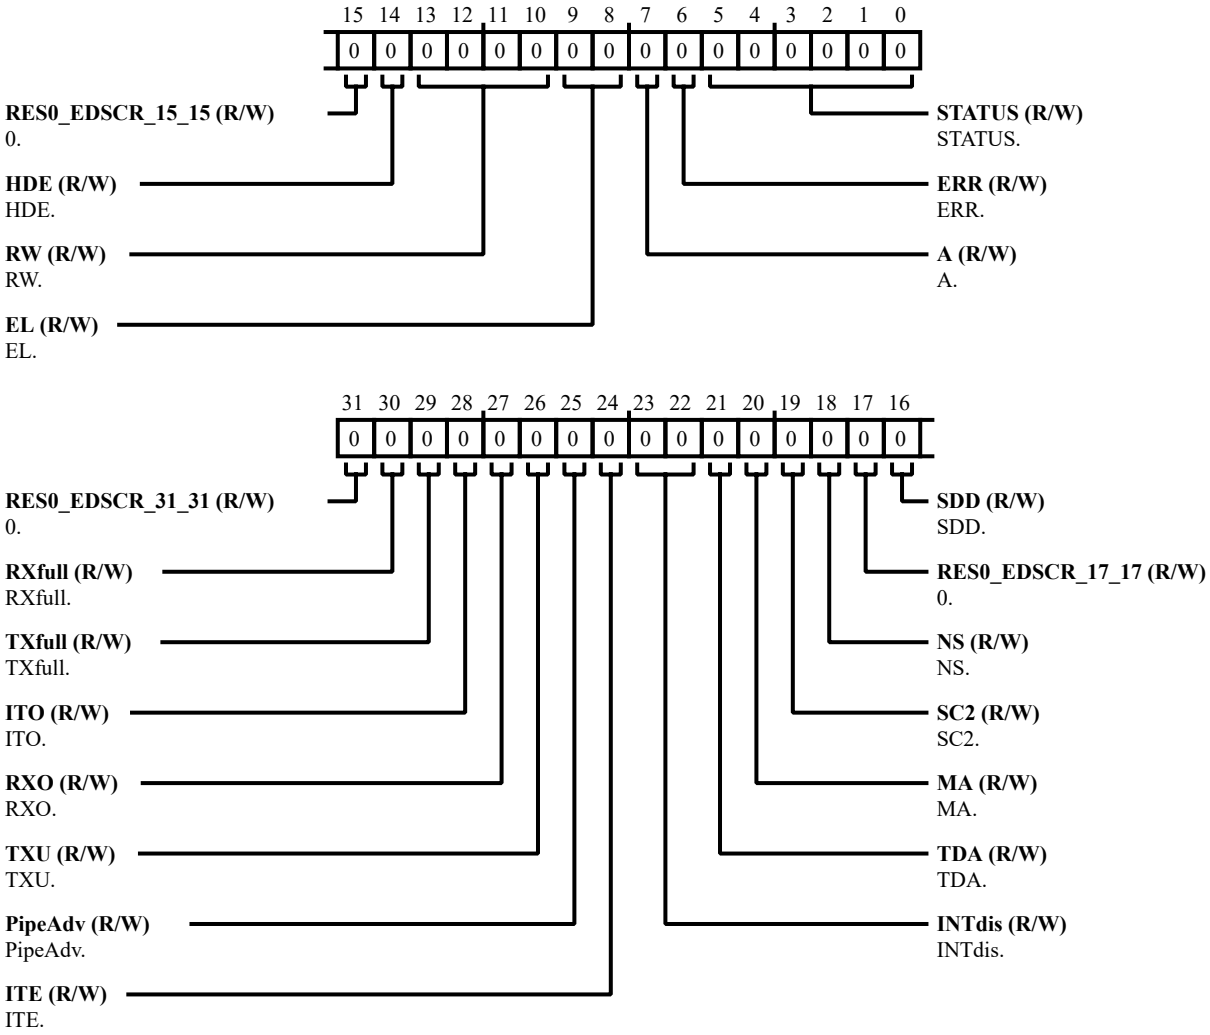

Figure 48-678: A55_C0_EDSCR Register Diagram

Table 48-685: A55_C0_EDSCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31 (R/W)	RES0_EDSCR_31_31	0.. Reserved, RES0.
30 (R/W)	RXFULL	RXfull.. DTRRX full. This bit is RO.

Table 48-685: A55_C0_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
29 (R/W)	TXFULL	TXfull.. DTRTX full. This bit is RO.
28 (R/W)	ITO	ITO.. ITR overrun. This bit is RO. If the PE is in Non-debug state, this bit is UNKNOWN. ITO is set to 0 on entry to Debug state.
27 (R/W)	RXO	RXO.. DTRRX overrun. This bit is RO.
26 (R/W)	TXU	TXU.. DTRTX underrun. This bit is RO.
25 (R/W)	PIPEADV	PipeAdv.. Pipeline advance. This bit is RO. Set to 1 every time the PE pipeline retires one or more instructions. Cleared to 0 by a write to EDRCR.CSPA. The architecture does not define precisely when this bit is set to 1. It requires only that this happen periodically in Non-debug state to indicate that software execution is progressing.
24 (R/W)	ITE	ITE.. ITR empty. This bit is RO. If the PE is in Non-debug state, this bit is UNKNOWN. It is always valid in Debug state.

Table 48-685: A55_C0_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:22 (R/W)	INTDIS	INTdis.. Interrupt disable. Disables taking interrupts (including virtual interrupts and System Error interrupts) in Non-Debug state. If external invasive debug is disabled, the value of this field is ignored. If external invasive debug is enabled, the possible values of this field are: 00 Do not disable interrupts. 01 Disable interrupts taken to Non-secure EL1. 10 Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable interrupts taken to Secure EL1. 11 Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable all other interrupts. The value of INTdis does not affect whether an interrupt is a WFI wake-up event, but can mask an interrupt as a WFE wake-up event. If EL3 and EL2 are not implemented, the values 0b01 and 0b10 are reserved. If programmed with a reserved value the PE behaves as if INTdis has been programmed with a defined value, other than for a direct read of EDSCR, and the value returned by a read of EDSCR.INTdis is UNKNOWN.	
		0	Do not disable interrupts.
		1	Disable interrupts taken to Non-secure EL1.
		2	Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable interrupts taken to Secure EL1.
		3	Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable all other interrupts.
21 (R/W)	TDA	TDA.. Traps accesses to the following Debug System registers: AArch64: DBGBCR<n>_EL1, DBGBVR<n>_EL1, DBGWCR<n>_EL1, DBGWVR<n>_EL1. AArch32: DBGBCR<n>, DBGBVR<n>, DBGBXVR<n>, DBGWCR<n>, DBGWVR<n>. The possible values of this field are: 0 Accesses to Debug System registers do not generate a Software Access debug event. 1 Accesses to Debug System registers generate a Software Access debug event, if OSLSR.OSLK is 0 and if halting is allowed.	
		0	Accesses to Debug System registers do not generate a Software Access debug event.
		1	Accesses to Debug System registers generate a Software Access debug event, if OSLSR.OSLK is 0 and if halting is allowed.

Table 48-685: A55_C0_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	MA	MA.. Memory access mode. Controls use of memory-access mode for accessing ITR and the DCC. This bit is ignored if in Non-debug state and set to zero on entry to Debug state. Possible values of this field are: 0 Normal access mode. 1 Memory access mode.	
		0	Normal access mode.
		1	Memory access mode.
19 (R/W)	SC2	SC2.. Sample CONTEXTIDR_EL2. Controls whether the Sample-based Profiling Extension samples CONTEXTIDR_EL2 or VTTBR_EL2.VMID. 0 Sample VTTBR_EL2.VMID. 1 Sample CONTEXTIDR_EL2.	
		0	Sample VTTBR_EL2.VMID.
		1	Sample CONTEXTIDR_EL2.
18 (R/W)	NS	NS.. Non-secure status. Read-only. When in Debug state, gives the current Security state: 0 Secure state, IsSecure() == TRUE. 1 Non-secure state, IsSecure() == FALSE. In Non-debug state, this bit is UNKNOWN.	
		0	Secure state, IsSecure() == TRUE.
		1	Non-secure state, IsSecure() == FALSE.
17 (R/W)	RES0_EDSCR_17_17	0.. Reserved, RES0.	
16 (R/W)	SDD	SDD.. Secure debug disabled. This bit is RO. On entry to Debug state: If entering in Secure state, SDD is set to 0. If entering in Non-secure state, SDD is set to the inverse of ExternalSecureInvasiveDebugEnabled(). In Debug state, the value of the SDD bit does not change, even if ExternalSecureInvasiveDebugEnabled() changes. In Non-debug state: SDD returns the inverse of ExternalSecureInvasiveDebugEnabled(). If the authentication signals that control ExternalSecureInvasiveDebugEnabled() change, a context synchronization operation is required to guarantee their effect. This bit is unaffected by the Security state of the PE. If EL3 is not implemented and the implementation is Non-secure, this bit is RES1.	
15 (R/W)	RES0_EDSCR_15_15	0.. Reserved, RES0.	

Table 48-685: A55_C0_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
14 (R/W)	HDE	HDE.. Halting debug enable. The possible values of this field are: 0 Halting disabled for Breakpoint, Watchpoint and Halt Instruction debug events. 1 Halting enabled for Breakpoint, Watchpoint and Halt Instruction debug events.	
		0	Halting disabled for Breakpoint, Watchpoint and Halt Instruction debug events.
		1	Halting enabled for Breakpoint, Watchpoint and Halt Instruction debug events.
13:10 (R/W)	RW	RW.. Exception level Execution state status. Read-only. In Debug state, each bit gives the current Execution state of each EL: RW Meaning 1111 All Exception levels are using AArch64. 1110 EL0 is using AArch32. All other Exception levels are using AArch64. 110x EL0 and EL1 are using AArch32. All other Exception levels are using AArch64. Never seen if EL2 is not implemented in the current Security state. 10xx EL0, EL1, and, if implemented in the current Security state, EL2 are using AArch32. All other Exception levels are using AArch64. 0xxx All Exception levels are using AArch32. However: The value of 1110 is only permitted at EL0. The values 110x are not permitted if either:EL2 is not implemented.EL3 is implemented and SCR_EL3.NS/ SCR.NS == 0. The values 10xx are not permitted if EL3 is not implemented. In Non-debug state, this field is RAO.	
9:8 (R/W)	EL	EL.. Exception level. Read-only. In Debug state, this gives the current EL of the PE. In Non-debug state, this field is RAZ.	
7 (R/W)	A	A.. System Error interrupt pending. Read-only. In Debug state, indicates whether a SError interrupt is pending: If HCR_EL2.{AMO, TGE} = {1, 0} and in Non-secure EL0 or EL1, a virtual SError interrupt. Otherwise, a physical SError interrupt. 0 No SError interrupt pending. 1 SError interrupt pending. A debugger can read EDSCR to check whether an SError interrupt is pending without having to execute further instructions. A pending SError might indicate data from target memory is corrupted. UNKNOWN in Non-debug state.	
		0	No SError interrupt pending.
		1	SError interrupt pending.
6 (R/W)	ERR	ERR.. Cumulative error flag. This field is RO. It is set to 1 following exceptions in Debug state and on any signaled overrun or underrun on the DTR or EDITR.	

Table 48-685: A55_C0_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
5:0 (R/W)	STATUS	STATUS.. Debug status flags. This field is RO. The possible values of this field are: 000010 PE is in Non-debug state. 000001 PE is restarting, exiting Debug state. 000111 Breakpoint. 010011 External debug request. 011011 Halting step, normal. 011111 Halting step, exclusive. 100011 OS Unlock Catch. 100111 Reset Catch. 101011 Watchpoint. 101111 HLT instruction. 110011 Software access to debug register. 110111 Exception Catch. 111011 Halting step, no syndrome. All other values of STATUS are reserved.	
		1	PE is restarting, exiting Debug state.
		2	PE is in Non-debug state.
		7	Breakpoint.
		19	External debug request.
		27	Halting step, normal.
		31	Halting step, exclusive.
		35	OS Unlock Catch.
		39	Reset Catch.
		43	Watchpoint.
		47	HLT instruction.
		51	Software access to debug register.
		55	Exception Catch.
		59	Halting step, no syndrome.

External Debug Watchpoint Address Register.

Returns the virtual data address being accessed when a watchpoint debug event was triggered.

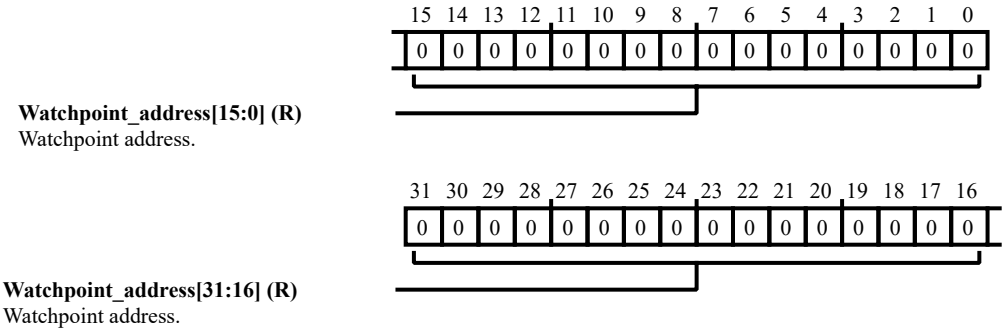

Figure 48-679: A55_C0_EDWAR_31_0 Register Diagram

Table 48-686: A55_C0_EDWAR_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/NW)	WATCHPOINT_ADDRESS	Watchpoint address.. Watchpoint address. The data virtual address being accessed when a watchpoint debug event was triggered and caused entry to Debug state. This address must be within a naturally-aligned block of memory of power-of-two size no larger than the DC ZVA block size. The value of this register is UNKNOWN if the PE is in Non-debug state, or if Debug state was entered other than for a Watchpoint debug event. The value of EDWAR[63:32] is UNKNOWN if Debug state was entered for a Watchpoint debug event taken from AArch32 state. The EDWAR is subject to the same alignment rules as the reporting of a watchpointed address in the FAR. See.

External Debug Watchpoint Address Register.

Returns the virtual data address being accessed when a watchpoint debug event was triggered.

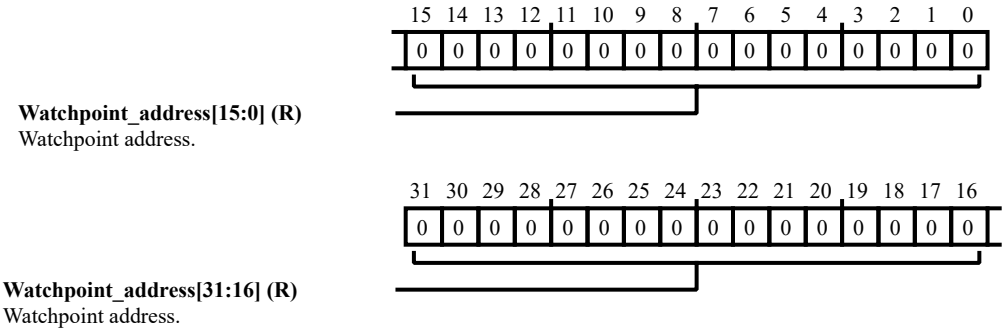

Figure 48-680: A55_C0_EDWAR_63_32 Register Diagram

Table 48-687: A55_C0_EDWAR_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/NW)	WATCHPOINT_ADDRESS	Watchpoint address.. Watchpoint address. The data virtual address being accessed when a watchpoint debug event was triggered and caused entry to Debug state. This address must be within a naturally-aligned block of memory of power-of-two size no larger than the DC ZVA block size. The value of this register is UNKNOWN if the PE is in Non-debug state, or if Debug state was entered other than for a Watchpoint debug event. The value of EDWAR[63:32] is UNKNOWN if Debug state was entered for a Watchpoint debug event taken from AArch32 state. The EDWAR is subject to the same alignment rules as the reporting of a watchpointed address in the FAR. See.

OS Lock Access Register.

Used to lock or unlock the OS lock.

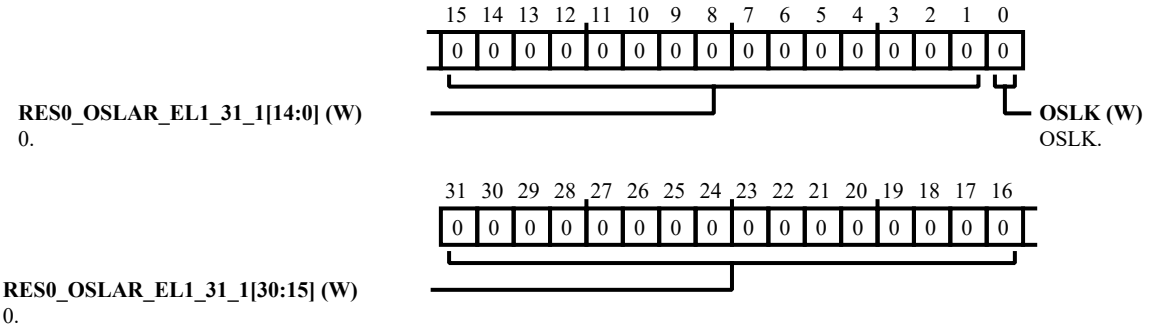

Figure 48-681: A55_C0_OSLAR_EL1 Register Diagram

Table 48-688: A55_C0_OSLAR_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:1 (RX/W)	RES0_OSLAR_EL1_31_1	0.. Reserved, RES0.
0 (RX/W)	OSLK	OSLK.. On writes to OSLAR_EL1, bit[0] is copied to the OS lock. Use EDPRSR.OSLK to check the current status of the lock.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

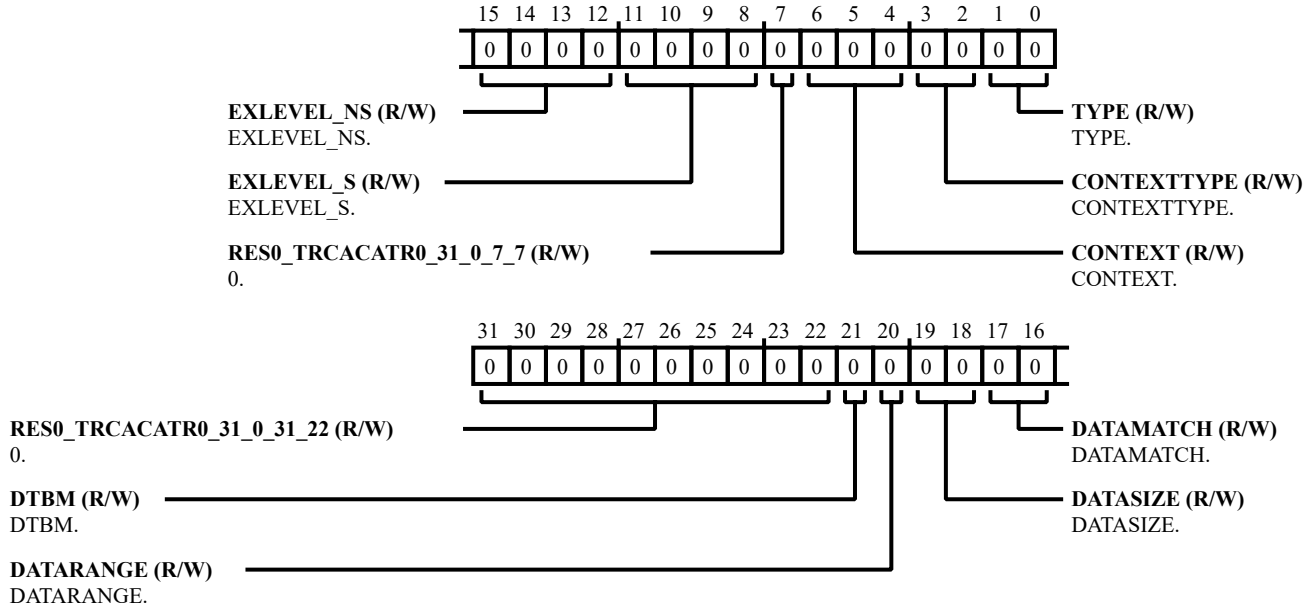

Figure 48-682: A55_C0_TRCACATR0_31_0 Register Diagram

Table 48-689: A55_C0_TRCACATR0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCA-CATR0_31_0_31_22	0.. Reserved, RES0.	
21 (R/W)	DTBM	DTBM.. Controls whether data address comparisons use the data address [63:56] bits: 0 The trace unit ignores the data address [63:56] bits for data address comparisons. 1 The trace unit uses the data address [63:56] bits for data address comparisons. Supported only if TRCIDR2.DASIZE indicates that the data address size is 64 bits, otherwise this bit is RES0.	
		0	The trace unit ignores the data address [63:56] bits for data address comparisons.
		1	The trace unit uses the data address [63:56] bits for data address comparisons.

Table 48-689: A55_C0_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	DATARANGE	DATARANGE.. Controls whether a data value comparison uses the single address comparator or the address range comparator: 0 The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE. 1 The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE. The trace unit ignores this field when DATAMATCH==0b00.Supported only if the corresponding data value comparator is supported, otherwise this bit is RES0.	
		0	The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE.
		1	The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE.
19:18 (R/W)	DATASIZE	DATASIZE.. Controls the width of the data value comparison: 00 Byte. 01 Halfword. 10 Word. 11 Doubleword. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.The doubleword width is supported only if TRCIDR2.DVSIZE indicates that 64-bit values are supported. If 64-bit values are not supported, 0b11 is reserved.	
		0	Byte.
		1	Halfword.
		2	Word.
		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-689: A55_C0_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR0_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-689: A55_C0_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-689: A55_C0_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

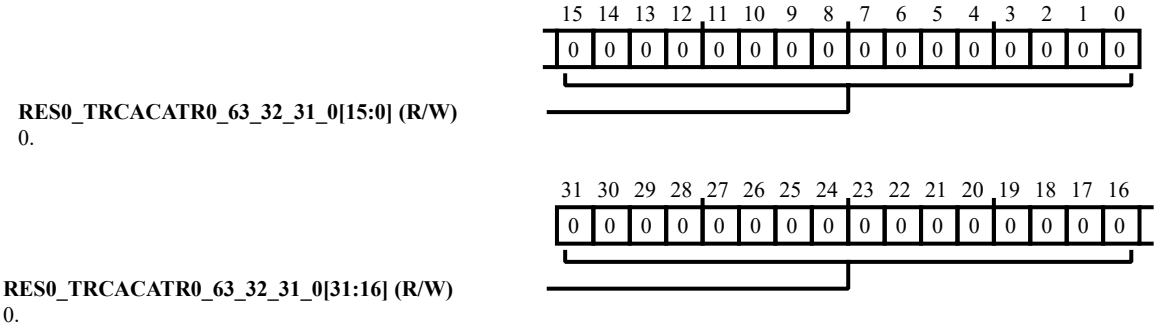

Figure 48-683: A55_C0_TRCACATR0_63_32 Register Diagram

Table 48-690: A55_C0_TRCACATR0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	RES0_TRCA-CATR0_63_32_31_0	0.. Reserved, RES0.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

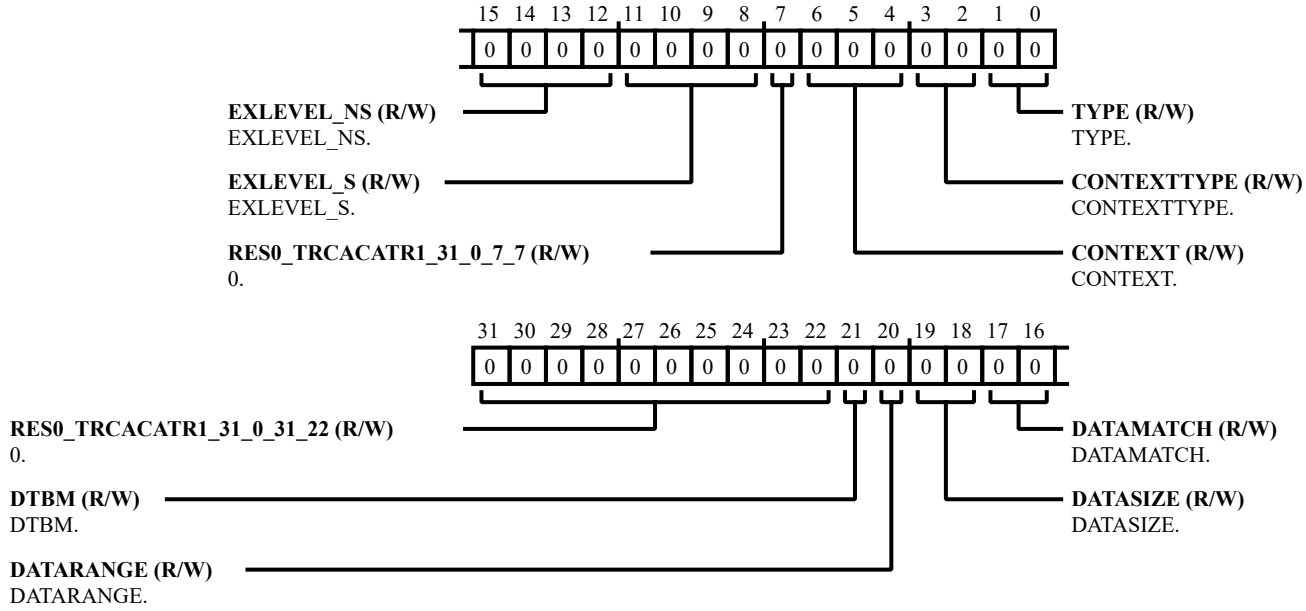

Figure 48-684: A55_C0_TRCACATR1_31_0 Register Diagram

Table 48-691: A55_C0_TRCACATR1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCA-CATR1_31_0_31_22	0.. Reserved, RES0.	
21 (R/W)	DTBM	DTBM.. Controls whether data address comparisons use the data address [63:56] bits: 0 The trace unit ignores the data address [63:56] bits for data address comparisons. 1 The trace unit uses the data address [63:56] bits for data address comparisons. Supported only if TRCIDR2.DASIZE indicates that the data address size is 64 bits, otherwise this bit is RES0.	
		0	The trace unit ignores the data address [63:56] bits for data address comparisons.
		1	The trace unit uses the data address [63:56] bits for data address comparisons.

Table 48-691: A55_C0_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	DATARANGE	DATARANGE.. Controls whether a data value comparison uses the single address comparator or the address range comparator: 0 The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE. 1 The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE. The trace unit ignores this field when DATAMATCH==0b00.Supported only if the corresponding data value comparator is supported, otherwise this bit is RES0.	
		0	The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE.
		1	The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE.
19:18 (R/W)	DATASIZE	DATASIZE.. Controls the width of the data value comparison: 00 Byte. 01 Halfword. 10 Word. 11 Doubleword. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.The doubleword width is supported only if TRCIDR2.DVSIZE indicates that 64-bit values are supported. If 64-bit values are not supported, 0b11 is reserved.	
		0	Byte.
		1	Halfword.
		2	Word.
		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-691: A55_C0_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR1_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-691: A55_C0_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-691: A55_C0_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

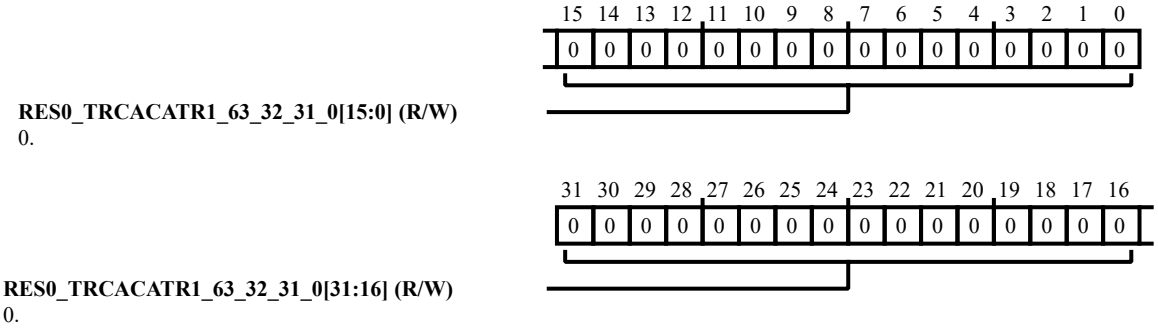

Figure 48-685: A55_C0_TRCACATR1_63_32 Register Diagram

Table 48-692: A55_C0_TRCACATR1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	RES0_TRCA-CATR1_63_32_31_0	0.. Reserved, RES0.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

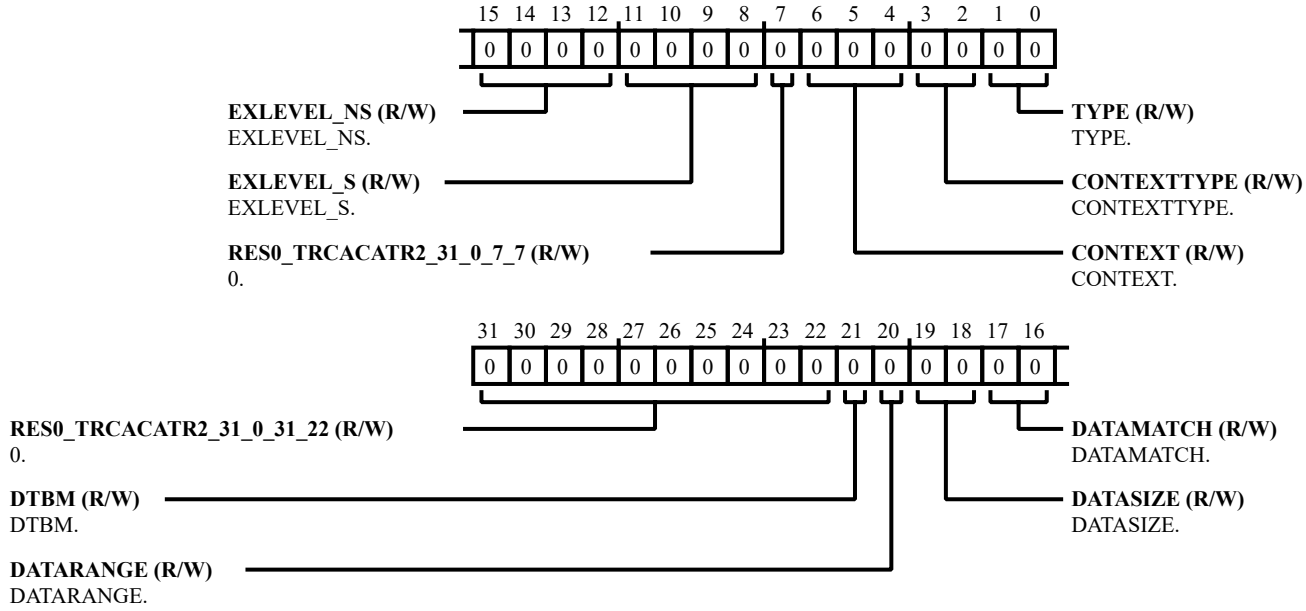

Figure 48-686: A55_C0_TRCACATR2_31_0 Register Diagram

Table 48-693: A55_C0_TRCACATR2_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCA-CATR2_31_0_31_22	0.. Reserved, RES0.	
21 (R/W)	DTBM	DTBM.. Controls whether data address comparisons use the data address [63:56] bits: 0 The trace unit ignores the data address [63:56] bits for data address comparisons. 1 The trace unit uses the data address [63:56] bits for data address comparisons. Supported only if TRCIDR2.DASIZE indicates that the data address size is 64 bits, otherwise this bit is RES0.	
		0	The trace unit ignores the data address [63:56] bits for data address comparisons.
		1	The trace unit uses the data address [63:56] bits for data address comparisons.

Table 48-693: A55_C0_TRCACATR2_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	DATARANGE	DATARANGE.. Controls whether a data value comparison uses the single address comparator or the address range comparator: 0 The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE. 1 The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE. The trace unit ignores this field when DATAMATCH==0b00.Supported only if the corresponding data value comparator is supported, otherwise this bit is RES0.	
		0	The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE.
		1	The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE.
19:18 (R/W)	DATASIZE	DATASIZE.. Controls the width of the data value comparison: 00 Byte. 01 Halfword. 10 Word. 11 Doubleword. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.The doubleword width is supported only if TRCIDR2.DVSIZE indicates that 64-bit values are supported. If 64-bit values are not supported, 0b11 is reserved.	
		0	Byte.
		1	Halfword.
		2	Word.
		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-693: A55_C0_TRCACATR2_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR2_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-693: A55_C0_TRCACATR2_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-693: A55_C0_TRCACATR2_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

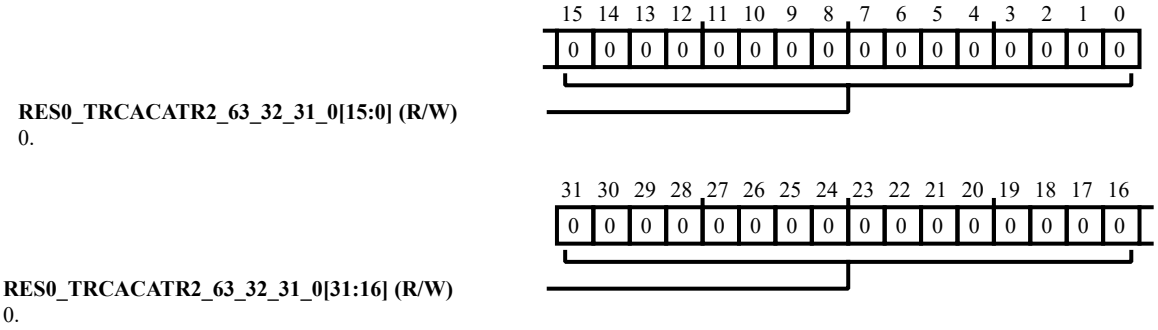

Figure 48-687: A55_C0_TRCACATR2_63_32 Register Diagram

Controls whether data address comparisons use the data address [63:56] bits: 0 The trace unit ignores the data address [63:56] bits for data address comparisons. 1 The trace unit uses the data address [63:56] bits for data address comparisons. Supported only if TRCIDR2.DASIZE indicates that the data address size is 64 bits, otherwise this bit is RES0.	
		0	The trace unit ignores the data address [63:56] bits for data address comparisons.
		1	The trace unit uses the data address [63:56] bits for data address comparisons.

Table 48-699: A55_C0_TRCACATR5_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	DATARANGE	DATARANGE.. Controls whether a data value comparison uses the single address comparator or the address range comparator: 0 The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE. 1 The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE. The trace unit ignores this field when DATAMATCH==0b00.Supported only if the corresponding data value comparator is supported, otherwise this bit is RES0.	
		0	The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE.
		1	The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE.
19:18 (R/W)	DATASIZE	DATASIZE.. Controls the width of the data value comparison: 00 Byte. 01 Halfword. 10 Word. 11 Doubleword. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.The doubleword width is supported only if TRCIDR2.DVSIZE indicates that 64-bit values are supported. If 64-bit values are not supported, 0b11 is reserved.	
		0	Byte.
		1	Halfword.
		2	Word.
		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-699: A55_C0_TRCACATR5_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR5_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-699: A55_C0_TRCACATR5_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

When the trace unit compares the ADDRESS field with an address that has a width less than this field, then it must ignore those upper bits in the comparison. For example, in a system that supports both 32-bit and 64-bit addresses, when the processor is in 32-bit state the comparator must ignore the ADDRESS[63:32] bits.

Trace Auxiliary Control Register.

The function of this register is IMPLEMENTATION DEFINED.

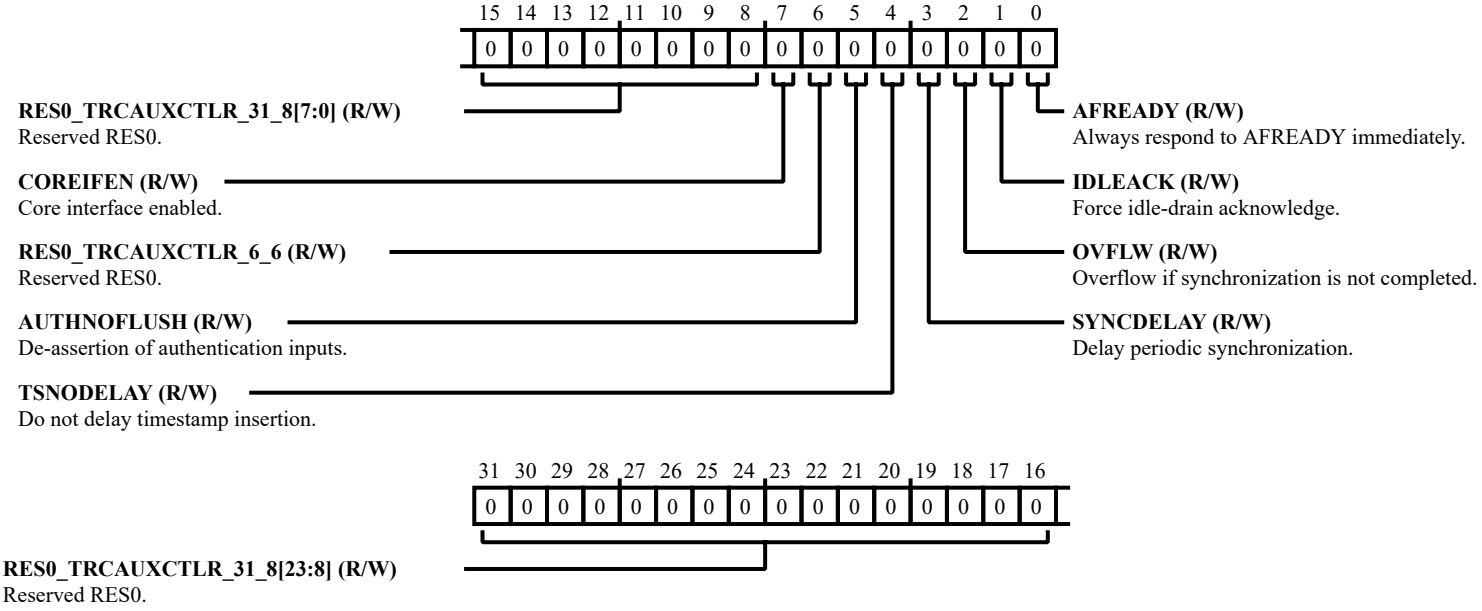

Figure 48-714: A55_C0_TRCAUXCTLR Register Diagram

Table 48-721: A55_C0_TRCAUXCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:8 (R/W)	RES0_TRCAUXCTLR_31_8	Reserved RES0.. Reserved RES0.	
		0	Reserved.
7 (R/W)	COREIFEN	Core interface enabled.. Keep core interface enabled regardless of trace enable register state.	
		0	Core interface enabled is set by trace enable register state.
		1	Enable core interface regardless of trace enable register state.
6 (R/W)	RES0_TRCAUXCTLR_6_6	Reserved RES0.. Reserved RES0.	
		0	Reserved.

Table 48-721: A55_C0_TRCAUXCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
5 (R/W)	AUTHNOFLUSH	De-assertion of authentication inputs.. Do not flush trace on de-assertion of authentication inputs. When this bit is set to 1 the trace unit behavior deviates from architecturally-specified behavior.	
		0	ETM trace unit FIFO is flushed and ETM trace unit enters idle state when DBGEN or NIDEN is LOW.
		1	ETM trace unit FIFO is not flushed and ETM trace unit does not enter idle state when DBGEN or NIDEN is LOW.
4 (R/W)	TSNODELAY	Do not delay timestamp insertion.. Do not delay timestamp insertion based on FIFO depth.	
		0	Timestamp packets are inserted into FIFO only when trace activity is LOW.
		1	Timestamp packets are inserted into FIFO irrespective of trace activity.
3 (R/W)	SYNCDELAY	Delay periodic synchronization.. Delay periodic synchronization if FIFO is more than half-full.	
		0	ETM trace unit AFREADYM output is asserted only when the ETM trace unit is in idle state or when all the trace bytes in FIFO before a flush request are output.
		1	ETM trace unit AFREADYM output is always asserted HIGH. When this bit is set to 1 trace unit behavior deviates from architecturally-specified behavior.
2 (R/W)	OVFLW	Overflow if synchronization is not completed.. Force an overflow if synchronization is not completed when second synchronization becomes due. When this bit is set to 1 the trace unit behavior deviates from architecturally-specified behavior.	
		0	ETM trace unit idle acknowledge is asserted only when the ETM trace unit is in idle state.
		1	ETM trace unit idle acknowledge is asserted irrespective of the ETM trace unit idle state.
1 (R/W)	IDLEACK	Force idle-drain acknowledge.. Force idle-drain acknowledge high CPU does not wait for trace to drain before entering WFX state. When this bit is set to 1 trace unit behavior deviates from architecturally-specified behavior.	
		0	No FIFO overflow when SYNC packets are delayed.
		1	Forces FIFO overflow when SYNC packets are delayed.

Table 48-721: A55_C0_TRCAUXCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	AFREADY	Always respond to AFREADY immediately.. Always respond to AFREADY immediately. Does not have any interaction with FIFO draining even in WFI state.	
		0	SYNC packets are inserted into FIFO only when trace activity is low.
		1	SYNC packets are inserted into FIFO irrespective of trace activity.

Trace Branch Broadcast Control Register.

Controls which regions in the memory map are enabled to use branch broadcasting.

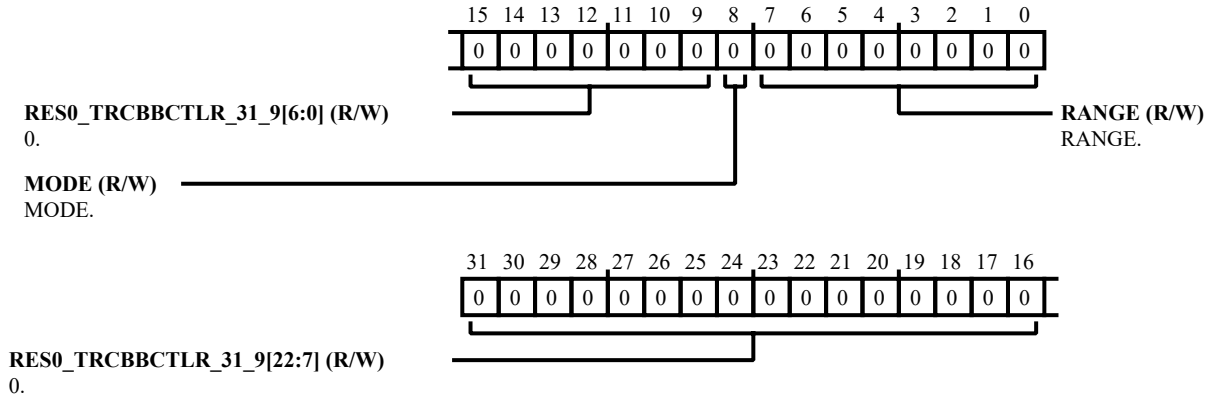

Figure 48-715: A55_C0_TRCBBCTLR Register Diagram

Table 48-722: A55_C0_TRCBBCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:9 (R/W)	RES0_TRCBBCTLR_31_9	0.. Reserved, RES0.	
8 (R/W)	MODE	MODE.. Mode bit: 0 Exclude mode. Branch broadcasting is not enabled in the address range that RANGE defines. If RANGE==0 then branch broadcasting is enabled for the entire memory map. 1 Include mode. Branch broadcasting is enabled in the address range that RANGE defines. If RANGE==0 then the branch broadcasting behavior is UNPREDICTABLE.	
		0	Exclude mode. Branch broadcasting is not enabled in the address range that RANGE defines. If RANGE==0 then branch broadcasting is enabled for the entire memory map.
		1	Include mode. Branch broadcasting is enabled in the address range that RANGE defines. If RANGE==0 then the branch broadcasting behavior is UNPREDICTABLE.

Table 48-722: A55_C0_TRCBBCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:0 (R/W)	RANGE	RANGE.. Address range field. Selects which address range comparator pairs are in use with branch broadcasting. Each bit represents an address range comparator pair, so bit[n] controls the selection of address range comparator pair n. If bit[n] is: 0 The address range that address range comparator pair n defines is not selected. 1 The address range that address range comparator pair n defines is selected.	
		0	The address range that address range comparator pair n defines is not selected.
		1	The address range that address range comparator pair n defines is selected.

Trace Cycle Count Control Register.

Sets the threshold value for cycle counting.

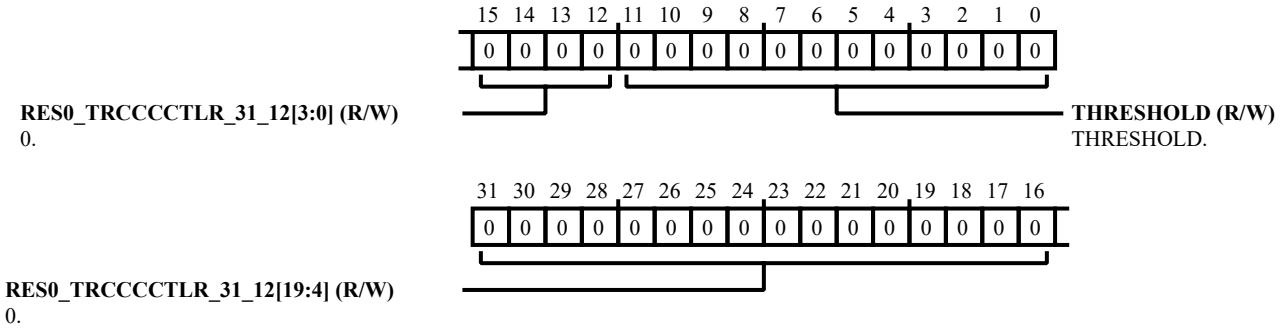

Figure 48-716: A55_C0_TRCCCCTLR Register Diagram

Table 48-723: A55_C0_TRCCCCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:12 (R/W)	RES0_TRCCCCTLR_31_12	0.. Reserved, RES0.
11:0 (R/W)	THRESHOLD	THRESHOLD.. Sets the threshold value for instruction trace cycle counting.The minimum threshold value that can be programmed into THRESHOLD is given in TRCIDR3.CCITMIN.Writing a value of zero might cause UNPREDICTABLE behaviour.

Trace Context ID Comparator Control Register 0.

Contains Context ID mask values for the TRCCIDCVRn registers, where n=0-3.

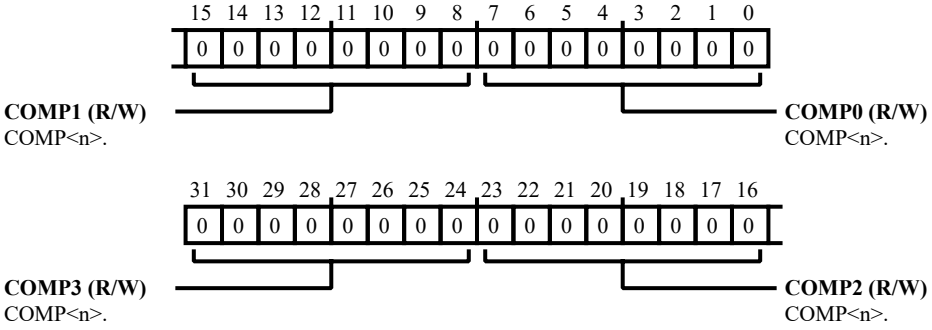

Figure 48-717: A55_C0_TRCCIDCCTLR0 Register Diagram

Table 48-724: A55_C0_TRCCIDCCTLR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/W)	COMP3	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.

Table 48-724: A55_C0_TRCCIDCCTLR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:16 (R/W)	COMP2	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
15:8 (R/W)	COMP1	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
7:0 (R/W)	COMP0	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.

Trace Context ID Comparator Value Registers.

Contains a Context ID value.

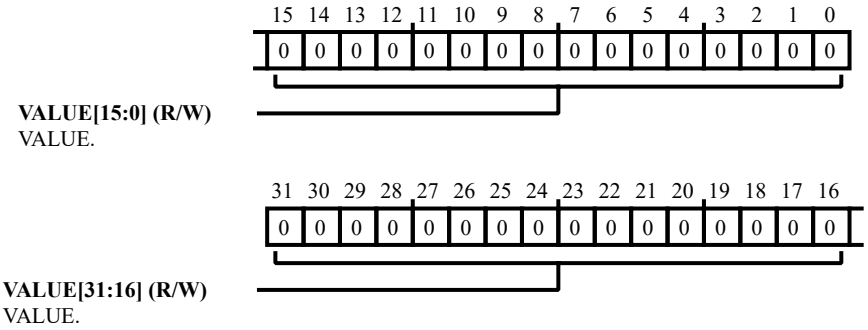

Figure 48-718: A55_C0_TRCCIDCVR0_31_0 Register Diagram

Table 48-725: A55_C0_TRCCIDCVR0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. Context ID value. The implemented width of this field is IMPLEMENTATION DEFINED and is set by TRCIDR2.CIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the Context ID is zero until the processor updates the Context ID.

Trace Context ID Comparator Value Registers.

Contains a Context ID value.

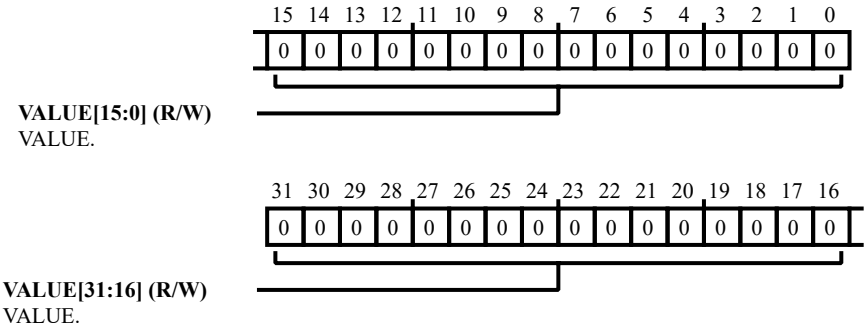

Figure 48-719: A55_C0_TRCCIDCVR0_63_32 Register Diagram

Table 48-726: A55_C0_TRCCIDCVR0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. Context ID value. The implemented width of this field is IMPLEMENTATION DEFINED and is set by TRCIDR2.CIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the Context ID is zero until the processor updates the Context ID.

Trace Claim Tag Clear Register.

Software can use this to clear a claim tag bit to 0, and to read the values of the claim tag.

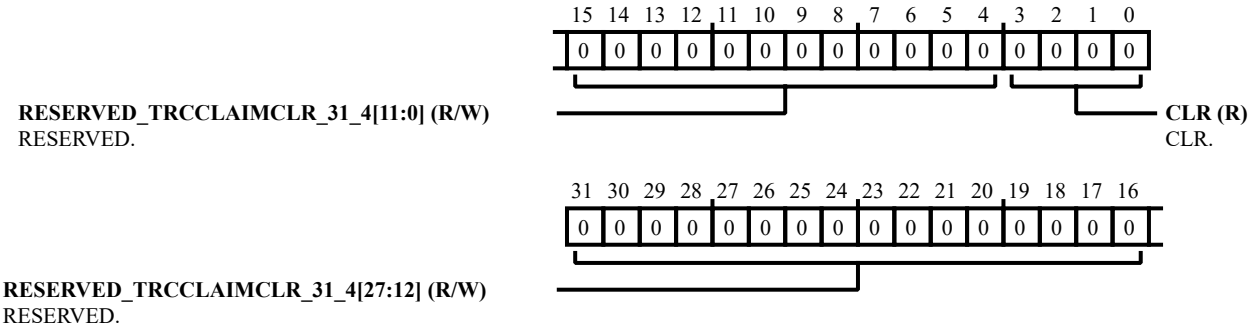

Figure 48-720: A55_C0_TRCCLAIMCLR Register Diagram

Table 48-727: A55_C0_TRCCLAIMCLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/W)	RESERVED_TRCCLAIMCLR_31_4	RESERVED.. Reserved RES0.	
		0	Reserved.
3:0 (R/NW)	CLR	CLR.. Clears bits in the claim tag and determines the current value of the claim tag.	
		0	On reads for each bit Claim tag bit is set.
		1	On reads for each bit Claim tag bit is not set.

Trace Claim Tag Set Register.

Software can use this to set bits in the claim tag to 1, and discover the number of bits that the claim tag supports.

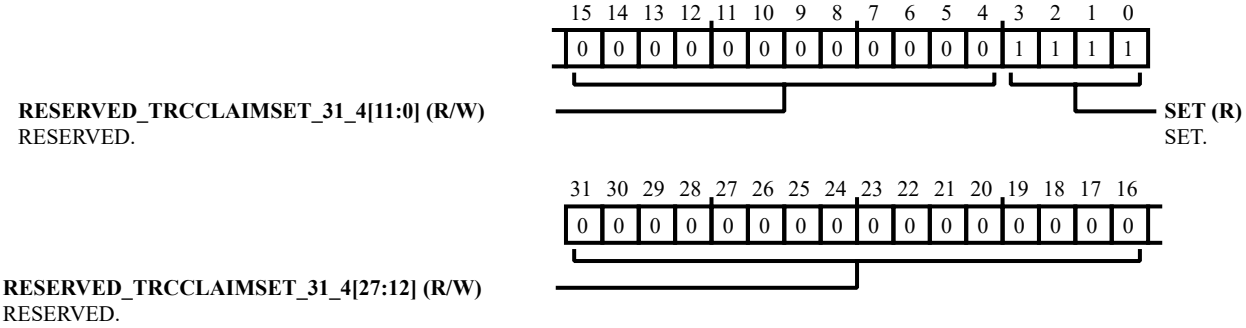

Figure 48-721: A55_C0_TRCCLAIMSET Register Diagram

Table 48-728: A55_C0_TRCCLAIMSET Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/W)	RESERVED_TRCCLAIM-SET_31_4	RESERVED.. Reserved RES0.	
		0	Reserved.
3:0 (R/NW)	SET	SET.. Sets bits in the claim tag and determines the number of claim tag bits implemented.	
		0	On reads for each bit Claim tag bit is implemented.
		1	On reads for each bit Claim tag bit is not implemented.

Trace Counter Control Registers.

Trace Counter Control Registers.

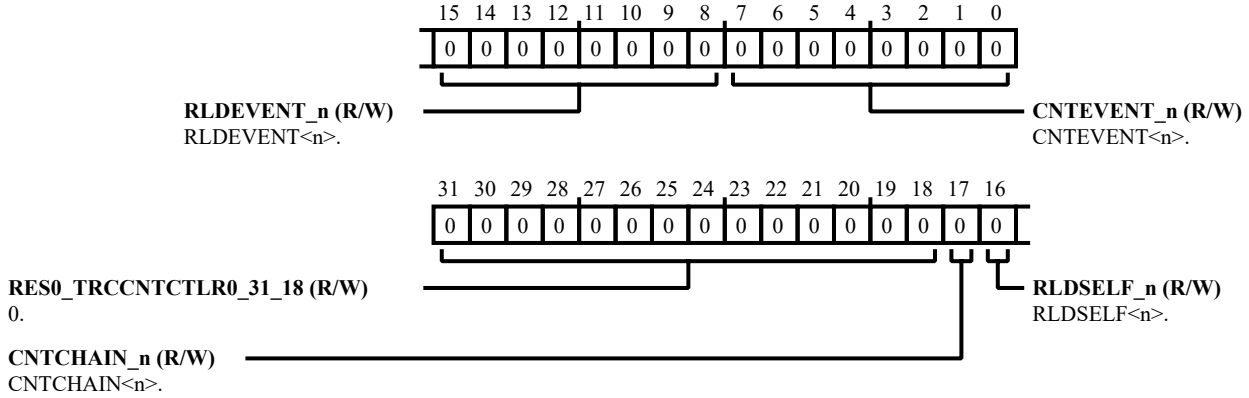

Figure 48-722: A55_C0_TRCCNTCTLR0 Register Diagram

Table 48-729: A55_C0_TRCCNTCTLR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:18 (R/W)	RES0_TRCCNTCTLR0_31_18	0.. Reserved, RES0.	
17 (R/W)	CNTCHAIN_N	CNTCHAIN<n>.. For TRCCNTCTLR3 and TRCCNTCTLR1, controls whether counter <n> decrements when a reload event occurs for counter <n-1>: 0 1 For TRCCNTCTLR2 and TRCCNTCTLR0, this bit is RES0.	
		0	
		1	
16 (R/W)	RLDSELF_N	RLDSELF<n>.. Controls whether a reload event occurs for counter <n>, when counter <n> reaches zero: 0 The trace unit does not generate a reload event. 1 The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.	
		0	The trace unit does not generate a reload event.
		1	The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.
15:8 (R/W)	RLDEVENT_N	RLDEVENT<n>.. Selects an event, that when it occurs causes a reload event for counter <n>.	

Table 48-729: A55_C0_TRCCNTCTLR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
7:0 (R/W)	CNTEVENT_N	CNTEVENT<n>.. Selects an event, that when it occurs causes counter <n> to decrement.

Trace Counter Control Registers.

Trace Counter Control Registers.

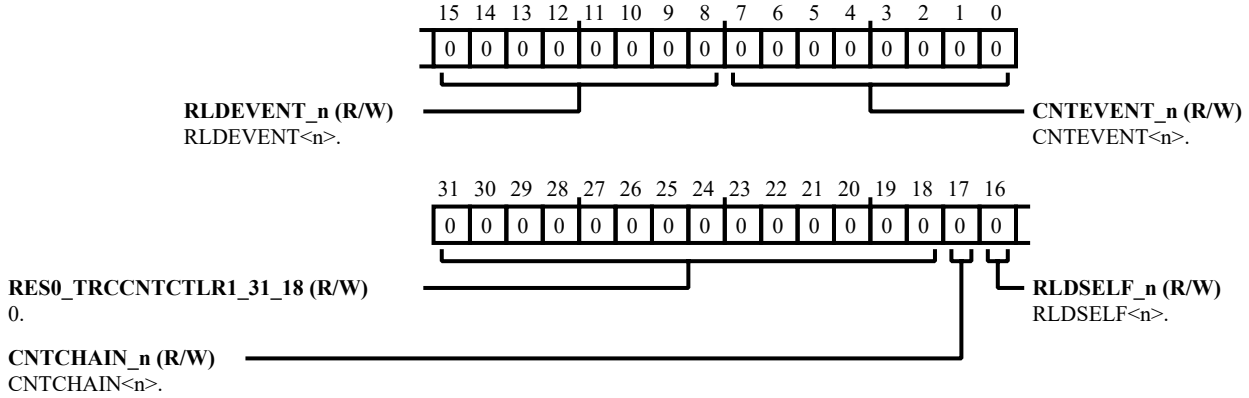

Figure 48-723: A55_C0_TRCCNTCTLR1 Register Diagram

Table 48-730: A55_C0_TRCCNTCTLR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:18 (R/W)	RES0_TRCCNTCTLR1_31_18	0.. Reserved, RES0.	
17 (R/W)	CNTCHAIN_N	CNTCHAIN<n>.. For TRCCNTCTLR3 and TRCCNTCTLR1, controls whether counter <n> decrements when a reload event occurs for counter <n-1>: 0 1 For TRCCNTCTLR2 and TRCCNTCTLR0, this bit is RES0.	
		0	
		1	
16 (R/W)	RLDSELF_N	RLDSELF<n>.. Controls whether a reload event occurs for counter <n>, when counter <n> reaches zero: 0 The trace unit does not generate a reload event. 1 The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.	
		0	The trace unit does not generate a reload event.
		1	The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.
15:8 (R/W)	RLDEVENT_N	RLDEVENT<n>.. Selects an event, that when it occurs causes a reload event for counter <n>.	

Table 48-730: A55_C0_TRCCNTCTLR1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
7:0 (R/W)	CNTEVENT_N	CNTEVENT<n>.. Selects an event, that when it occurs causes counter <n> to decrement.

Trace Counter Reload Value Registers.

This sets or returns the reload count value for counter 0.

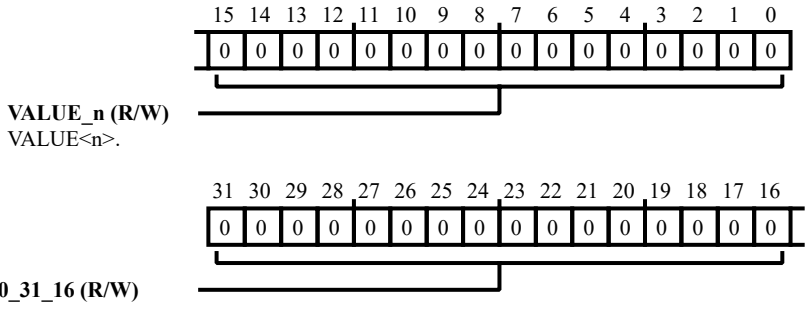

Figure 48-724: A55_C0_TRCCNTRLDVR0 Register Diagram

Table 48-731: A55_C0_TRCCNTRLDVR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTRLDVR0_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the reload value for counter <n>. When a reload event occurs for counter <n> then the trace unit copies the VALUE<n> field into counter <n>.

Trace Counter Reload Value Registers.

This sets or returns the reload count value for counter 1.

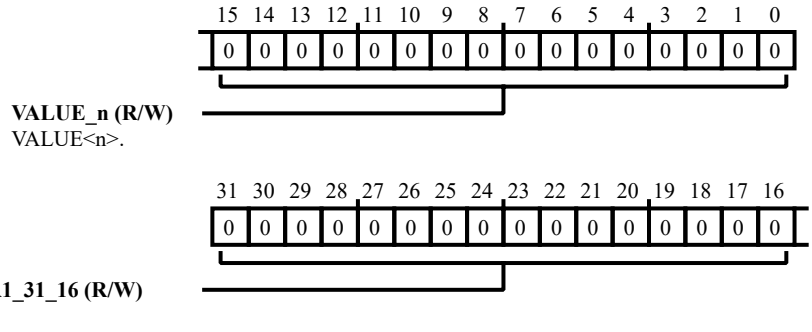

Figure 48-725: A55_C0_TRCCNTRLDVR1 Register Diagram

Table 48-732: A55_C0_TRCCNTRLDVR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTRLDVR1_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the reload value for counter <n>. When a reload event occurs for counter <n> then the trace unit copies the VALUE<n> field into counter <n>.

Trace Counter Value Registers.

This sets or returns the value of counter 0.

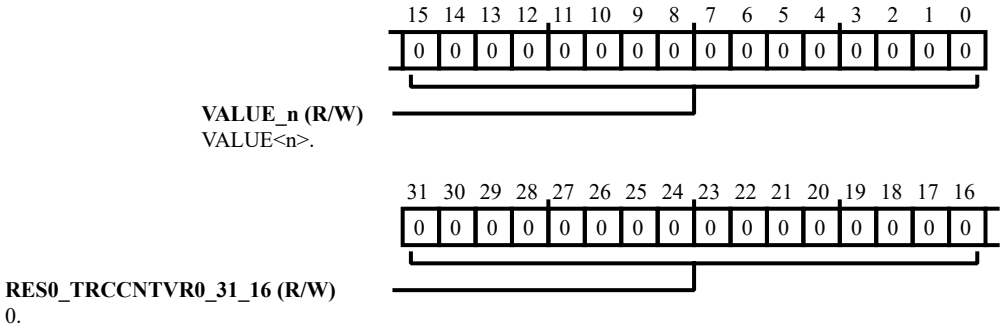

Figure 48-726: A55_C0_TRCCNTVR0 Register Diagram

Table 48-733: A55_C0_TRCCNTVR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTVR0_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the count value of counter <n>.

Trace Counter Value Registers.

This sets or returns the value of counter 1.

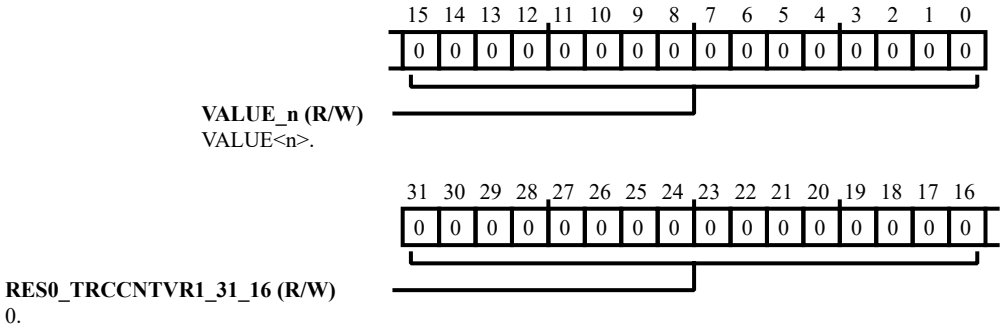

Figure 48-727: A55_C0_TRCCNTVR1 Register Diagram

31:16 (R/W)	RES0_TRCCNTVR1_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the count value of counter <n>.

Trace Configuration Register.

Controls the tracing options.

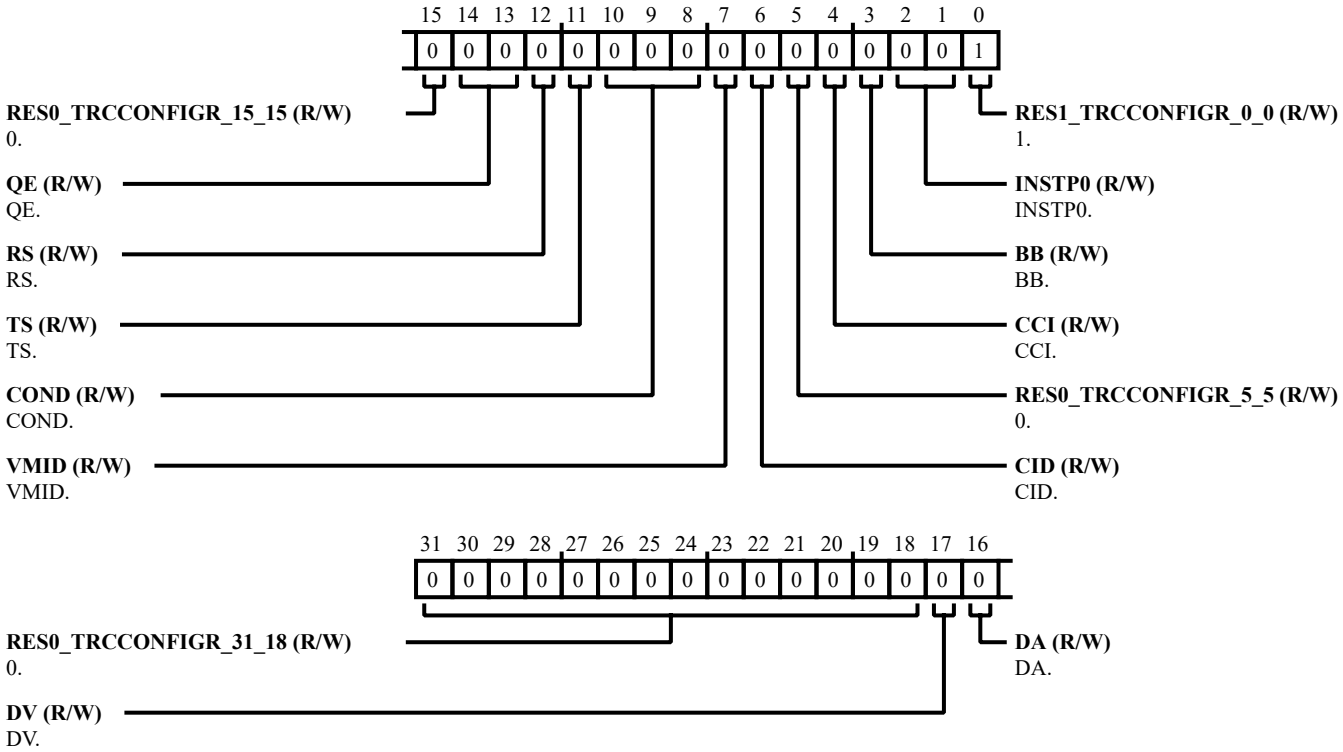

Figure 48-728: A55_C0_TRCCONFIGR Register Diagram

Table 48-735: A55_C0_TRCCONFIGR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:18 (R/W)	RES0_TRCCON-FIGR_31_18	0.. Reserved, RES0.	
17 (R/W)	DV	DV.. Data value tracing bit: 0 Data value tracing is disabled. 1 Data value tracing is enabled when INSTP0 is not 0b00. TRCIDR0.TRCDATA indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Data value tracing is disabled.
		1	Data value tracing is enabled when INSTP0 is not 0b00.

Table 48-735: A55_C0_TRCCONFIGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
16 (R/W)	DA	DA.. Data address tracing bit: 0 Data address tracing is disabled. 1 Data address tracing is enabled when INSTP0 is not 0b00. TRCIDR0.TRCDATA indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Data address tracing is disabled.
		1	Data address tracing is enabled when INSTP0 is not 0b00.
15 (R/W)	RES0_TRCCON-FIGR_15_15	0.. Reserved, RES0.	
14:13 (R/W)	QE	QE.. Q element enable field: 00 Q elements are disabled. 01 Q elements with instruction counts are enabled. Q elements without instruction counts are disabled. 11 Q elements with and without instruction counts are enabled. The value 0b10 is reserved.TRCIDR0.QSUPP indicates which values of this field are implemented.TRCCONFIGR.QE must be set to 0b00 if any of the following are true:TRCCONFIGR.INSTP0 is not 0b00.TRCCONFIGR.COND is not 0b000.TRCCONFIGR.BB is not 0.	
		0	Q elements are disabled.
		1	Q elements with instruction counts are enabled. Q elements without instruction counts are disabled.
		3	Q elements with and without instruction counts are enabled.
12 (R/W)	RS	RS.. Return stack enable bit. 0 Return stack is disabled. 1 Return stack is enabled. TRCIDR0.RETSTACK indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Return stack is disabled.
		1	Return stack is enabled.
11 (R/W)	TS	TS.. Global timestamp tracing bit: 0 Global timestamp tracing is disabled. 1 Global timestamp tracing is enabled. TRCTSCTLR controls the insertion of timestamps in the trace. TRCIDR0.TSSIZE indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Global timestamp tracing is disabled.
		1	Global timestamp tracing is enabled. TRCTSCTLR controls the insertion of timestamps in the trace.

Table 48-735: A55_C0_TRCCONFIGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
10:8 (R/W)	COND	COND.. Conditional instruction tracing bit. The permitted values are: 000 Conditional instruction tracing is disabled. 001 Conditional load instructions are traced. 010 Conditional store instructions are traced. 011 Conditional load and store instructions are traced. 111 All conditional instructions are traced. All other values are reserved.TRCIDR0.TRCCOND indicates whether this field is supported. If it is not supported then this field is RES0.	
		0	Conditional instruction tracing is disabled.
		1	Conditional load instructions are traced.
		2	Conditional store instructions are traced.
		3	Conditional load and store instructions are traced.
		7	All conditional instructions are traced.
7 (R/W)	VMID	VMID.. VMID tracing bit: 0 VMID tracing is disabled. 1 VMID tracing is enabled. TRCIDR2.VMIDSIZE indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	VMID tracing is disabled.
		1	VMID tracing is enabled.
6 (R/W)	CID	CID.. Context ID tracing bit: 0 Context ID tracing is disabled. 1 Context ID tracing is enabled. TRCIDR2.CIDSIZE indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Context ID tracing is disabled.
		1	Context ID tracing is enabled.
5 (R/W)	RES0_TRCCONFIGR_5_5	0.. Reserved, RES0.	
4 (R/W)	CCI	CCI.. Cycle counting instruction trace bit: 0 Cycle counting in the instruction trace is disabled. 1 Cycle counting in the instruction trace is enabled. TRCCCCTLR controls the threshold value for cycle counting. TRCIDR0.TRCCCI indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Cycle counting in the instruction trace is disabled.
		1	Cycle counting in the instruction trace is enabled. TRCCCCTLR controls the threshold value for cycle counting.

Table 48-735: A55_C0_TRCCONFIGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3 (R/W)	BB	BB.. Branch broadcast mode bit: 0 Branch broadcast mode is disabled. 1 Branch broadcast mode is enabled. TRCBBCTLR controls which regions of memory are enabled to use branch broadcasting. TRCIDR0.TRCBB indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Branch broadcast mode is disabled.
		1	Branch broadcast mode is enabled. TRCBBCTLR controls which regions of memory are enabled to use branch broadcasting.
2:1 (R/W)	INSTP0	INSTP0.. Instruction P0 bit. This field controls whether load and store instructions are traced as P0 instructions: 00 Do not trace load and store instructions as P0 instructions. 01 Trace load instructions as P0 instructions. 10 Trace store instructions as P0 instructions. 11 Trace load and store instructions as P0 instructions. TRCIDR0.INSTP0 indicates whether this field is supported. If it is not supported then this field is RES0.	
		0	Do not trace load and store instructions as P0 instructions.
		1	Trace load instructions as P0 instructions.
		2	Trace store instructions as P0 instructions.
		3	Trace load and store instructions as P0 instructions.
0 (R/W)	RES1_TRCCONFIGR_0_0	1.. Reserved, RES1.	

Trace Event Control 0 Register.

Trace Event Control 0 Register.

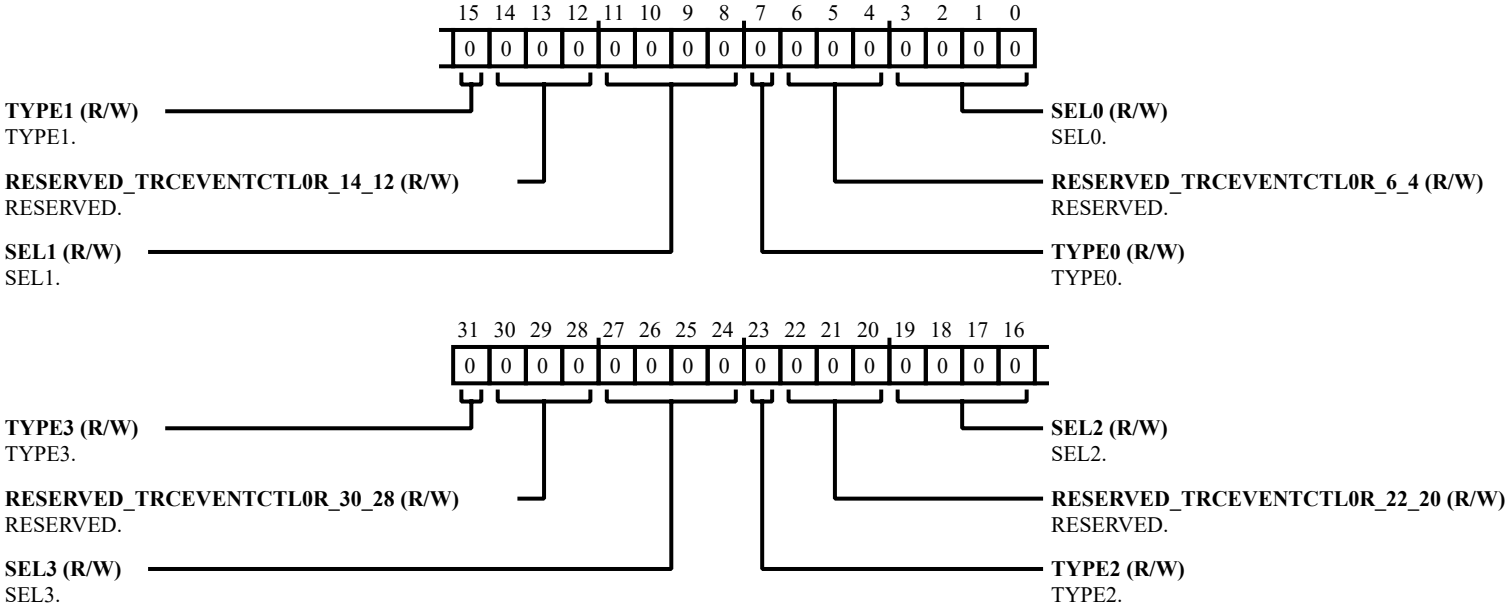

Figure 48-729: A55_C0_TRCEVENTCTL0R Register Diagram

Table 48-736: A55_C0_TRCEVENTCTL0R Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	TYPE3	TYPE3.. Selects the resource type for trace event 3.	
		0	Single selected resource.
		1	Boolean combined resource pair.
30:28 (R/W)	RESERVED_TRCE-VENTCTL0R_30_28	RESERVED.. Reserved RES0.	
		0	Reserved.
27:24 (R/W)	SEL3	SEL3.. Selects the resource number based on the value of TYPE3.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].

Table 48-736: A55_C0_TRCEVENTCTL0R Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23 (R/W)	TYPE2	TYPE2.. Selects the resource type for trace event 2.	
		0	Single selected resource.
		1	Boolean combined resource pair.
22:20 (R/W)	RESERVED_TRCE-VENTCTL0R_22_20	RESERVED.. Reserved RES0.	
		0	Reserved.
19:16 (R/W)	SEL2	SEL2.. Selects the resource number based on the value of TYPE2.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].
15 (R/W)	TYPE1	TYPE1.. Selects the resource type for trace event 1.	
		0	Single selected resource.
		1	Boolean combined resource pair.
14:12 (R/W)	RESERVED_TRCE-VENTCTL0R_14_12	RESERVED.. Reserved RES0.	
		0	Reserved.
11:8 (R/W)	SEL1	SEL1.. Selects the resource number based on the value of TYPE1.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].
7 (R/W)	TYPE0	TYPE0.. Selects the resource type for trace event 0.	
		0	Single selected resource.
		1	Boolean combined resource pair.
6:4 (R/W)	RESERVED_TRCE-VENTCTL0R_6_4	RESERVED.. Reserved RES0.	
		0	Reserved.

Table 48-736: A55_C0_TRCEVENTCTL0R Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	SEL0	SEL0.. Selects the resource number based on the value of TYPE0.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].

Trace Event Control 1 Register.

Trace Event Control 1 Register.

Table 48-737: A55_C0_TRCEVENTCTL1R Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:13 (R/W)	RESERVED_TRCE-VENTCTL1R_31_13	RESERVED.. Reserved RES0.	
		0	Reserved.
12 (R/W)	LPOVERRIDE	LPOVERRIDE.. Low power state behavior override.	
		0	Low power state behavior unaffected.
		1	Low power state behavior overridden. The resources and Event trace generation are unaffected by entry to a low power state.
11 (R/W)	ATB	ATB.. ATB trigger enable.	
		0	ATB trigger disabled.
		1	ATB trigger enabled.
10:4 (R/W)	RESERVED_TRCE-VENTCTL1R_10_4	RESERVED.. Reserved RES0.	
		0	Reserved.

Table 48-737: A55_C0_TRCEVENTCTL1R Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	EN	EN.. One bit per event to enable generation of an event element in the instruction trace stream when the selected event occurs.	
		0	Event does not cause an event element.
		1	Event causes an event element.

Trace External Input Select Register.

Use this to set, or read, which external inputs are resources to the trace unit.

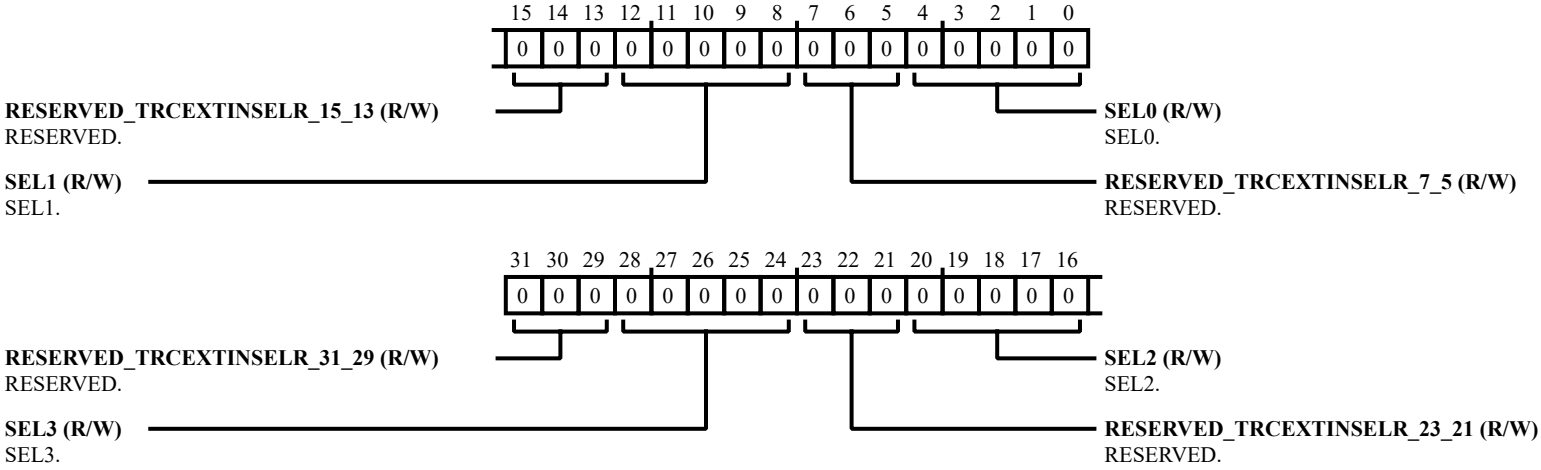

Figure 48-731: A55_C0_TRCEXTINSELR Register Diagram

Table 48-738: A55_C0_TRCEXTINSELR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/W)	RESERVED_TRCEXTIN-SELR_31_29	RESERVED.. Reserved RES0.	
		0	Reserved.
28:24 (R/W)	SEL3	SEL3.. Selects an event from the external input bus for External Input Resource 3.	
23:21 (R/W)	RESERVED_TRCEXTIN-SELR_23_21	RESERVED.. Reserved RES0.	
		0	Reserved.
20:16 (R/W)	SEL2	SEL2.. Selects an event from the external input bus for External Input Resource 2.	
15:13 (R/W)	RESERVED_TRCEXTIN-SELR_15_13	RESERVED.. Reserved RES0.	
		0	Reserved.
12:8 (R/W)	SEL1	SEL1.. Selects an event from the external input bus for External Input Resource 1.	

Table 48-738: A55_C0_TRCEXTINSELR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:5 (R/W)	RESERVED_TRCEXTIN-SELR_7_5	RESERVED.. Reserved RES0.	
		0	Reserved.
4:0 (R/W)	SEL0	SEL0.. Selects an event from the external input bus for External Input Resource 0.	

Trace ID Register 0.

Returns the tracing capabilities of the trace unit.

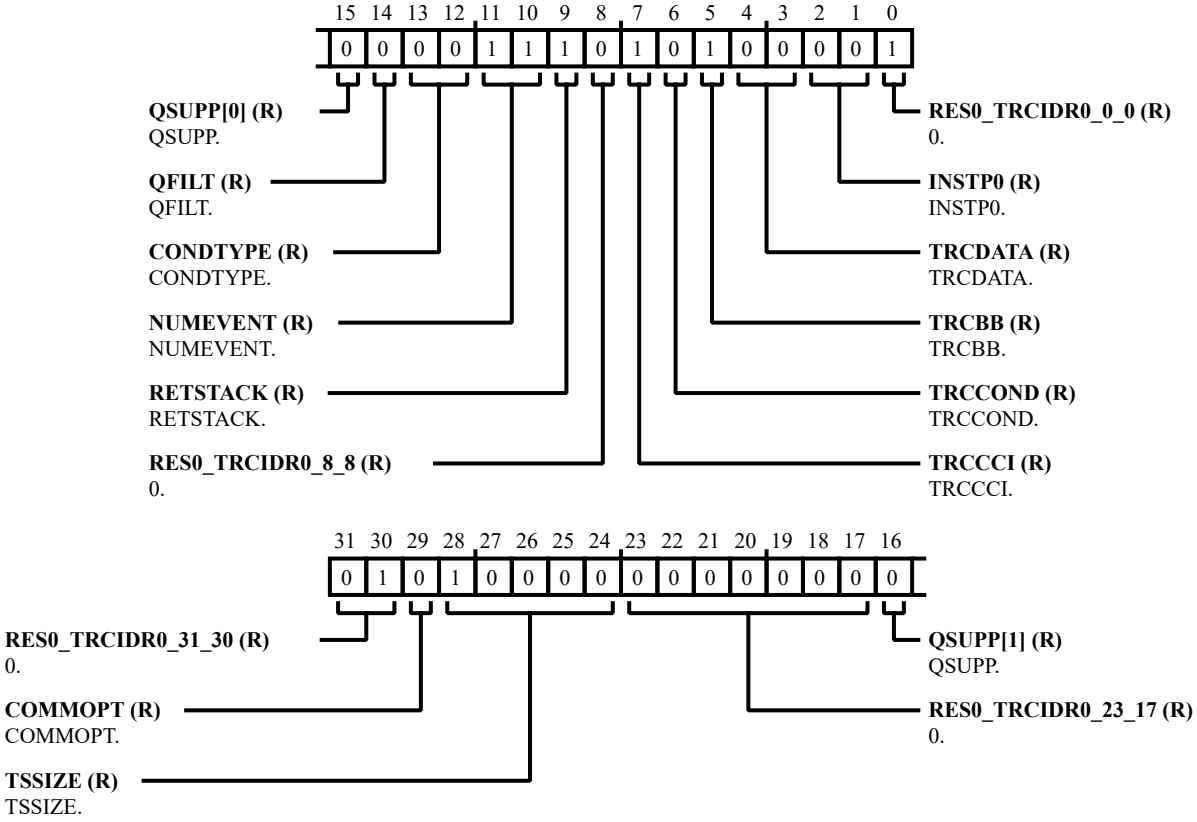

Figure 48-732: A55_C0_TRCIDR0 Register Diagram

Table 48-739: A55_C0_TRCIDR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:30 (R/NW)	RES0_TRCIDR0_31_30	0.. Reserved, RES0.	
29 (R/NW)	COMMOPT	COMMOPT.. Conditional instruction tracing support bit. Indicates if the trace unit supports conditional instruction tracing: 0 Conditional instruction tracing is not supported. 1 Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.	
		0	Conditional instruction tracing is not supported.
		1	Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.

Table 48-739: A55_C0_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28:24 (R/NW)	TSSIZE	TSSIZE.. Global timestamp size field. The permitted values are: 00000 Global timestamping is not implemented. 00110 Implementation supports a maximum global timestamp of 48bits. 01000 Implementation supports a maximum global timestamp of 64bits. All other values are reserved.When global timestamping is implemented then TRCCONFIGR.TS and TRCTSCTLR are supported.	
		0	Global timestamping is not implemented.
		6	Implementation supports a maximum global timestamp of 48bits.
		8	Implementation supports a maximum global timestamp of 64bits.
23:17 (R/NW)	RES0_TRCIDR0_23_17	0.. Reserved, RES0.	
16:15 (R/NW)	QSUPP	QSUPP.. Q element support field. The permitted values are: 00 Q element support is not implemented. TRCCONFIGR.QE is RES0. 01 Q element support is implemented, and only supports Q elements with instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b01. 10 Q element support is implemented, and only supports Q elements without instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b11. 11 Q element support is implemented, and supports both Q elements with instruction counts and Q elements without instruction counts. TRCCONFIGR.QE is fully implemented.	
		0	Q element support is not implemented. TRCCONFIGR.QE is RES0.
		1	Q element support is implemented, and only supports Q elements with instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b01.
		2	Q element support is implemented, and only supports Q elements without instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b11.
		3	Q element support is implemented, and supports both Q elements with instruction counts and Q elements without instruction counts. TRCCONFIGR.QE is fully implemented.

Table 48-739: A55_C0_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
14 (R/NW)	QFILT	QFILT.. Q element filtering support field. The permitted values are: 0 Q element filtering is not implemented. 1 Q element filtering is implemented. TRCQCTLR is implemented. When QSUPP==0b00, this field is RES0.	
		0	Q element filtering is not implemented.
		1	Q element filtering is implemented. TRCQCTLR is implemented.
13:12 (R/NW)	CONDTYPE	CONDTYPE.. Conditional tracing field. The permitted values are: 00 The trace unit indicates only if a conditional instruction is a pass or fail. 01 The trace unit provides the Current Program Status Register (CPSR) status, for a conditional instruction. All other values are reserved.	
		0	The trace unit indicates only if a conditional instruction is a pass or fail.
		1	The trace unit provides the Current Program Status Register (CPSR) status, for a conditional instruction.
11:10 (R/NW)	NUMEVENT	NUMEVENT.. Number of events field. Indicates how many events the trace unit supports: 00 The trace unit supports 1 event. 01 The trace unit supports 2 events. 10 The trace unit supports 3 events. 11 The trace unit supports 4 events. This field controls how many fields are supported in TRCEVENTCTL0R, and indicates the size of TRCEVENTCTL1R.INSTEN.	
		0	The trace unit supports 1 event.
		1	The trace unit supports 2 events.
		2	The trace unit supports 3 events.
		3	The trace unit supports 4 events.
9 (R/NW)	RETSTACK	RETSTACK.. Return stack bit. Indicates if the implementation supports a return stack: 0 Return stack is not implemented. 1 Return stack is implemented, so TRCCONFIGR.RS is supported.	
		0	Return stack is not implemented.
		1	Return stack is implemented, so TRCCONFIGR.RS is supported.
8 (R/NW)	RES0_TRCIDR0_8_8	0.. Reserved, RES0.	

Table 48-739: A55_C0_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7 (R/NW)	TRCCCI	TRCCCI.. Cycle counting instruction bit. Indicates if the trace unit supports cycle counting for instructions: 0 Cycle counting in the instruction trace is not implemented. 1 Cycle counting in the instruction trace is implemented, so TRCCONFIGR.CCI and TRCCCCTLR are supported.	
		0	Cycle counting in the instruction trace is not implemented.
		1	Cycle counting in the instruction trace is implemented, so TRCCONFIGR.CCI and TRCCCCTLR are supported.
6 (R/NW)	TRCCOND	TRCCOND.. Conditional instruction tracing support bit. Indicates if the trace unit supports conditional instruction tracing: 0 Conditional instruction tracing is not supported. 1 Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.	
		0	Conditional instruction tracing is not supported.
		1	Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.
5 (R/NW)	TRCBB	TRCBB.. Branch broadcast tracing support bit. Indicates if the trace unit supports branch broadcast tracing: 0 Branch broadcast tracing is not supported. 1 Branch broadcast tracing is supported, so TRCCONFIGR.BB and TRCBBCTLR are supported.	
		0	Branch broadcast tracing is not supported.
		1	Branch broadcast tracing is supported, so TRCCONFIGR.BB and TRCBBCTLR are supported.
4:3 (R/NW)	TRCDATA	TRCDATA.. Conditional tracing field. The permitted values are: 00 Data tracing is not supported. 11 Tracing of data addresses and data values is supported, so TRCCONFIGR.DA, TRCCONFIGR.DV, TRCSTALLCTLR.DATADISCARD, TRCSTALLCTLR.INSTPRIORITY, TRCSTALLCTLR.DSTALL, and TRCEVENTCTL1R.DATAEN are supported. All other values are reserved.	
		0	Data tracing is not supported.
		3	Tracing of data addresses and data values is supported, so TRCCONFIGR.DA, TRCCONFIGR.DV, TRCSTALLCTLR.DATADISCARD, TRCSTALLCTLR.INSTPRIORITY, TRCSTALLCTLR.DSTALL, and TRCEVENTCTL1R.DATAEN are supported.

Table 48-739: A55_C0_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2:1 (R/NW)	INSTP0	INSTP0.. P0 tracing support field. The permitted values are: 00 Tracing of load and store instructions as P0 elements is not supported. 11 Tracing of load and store instructions as P0 elements is supported, so TRCCONFIGR.INSTP0 is supported. All other values are reserved.	
		0	Tracing of load and store instructions as P0 elements is not supported.
		3	Tracing of load and store instructions as P0 elements is supported, so TRCCONFIGR.INSTP0 is supported.
0 (R/NW)	RES0_TRCIDR0_0_0	0.. Reserved, RES0.	

Trace ID Register 1.

Returns the base architecture of the trace unit.

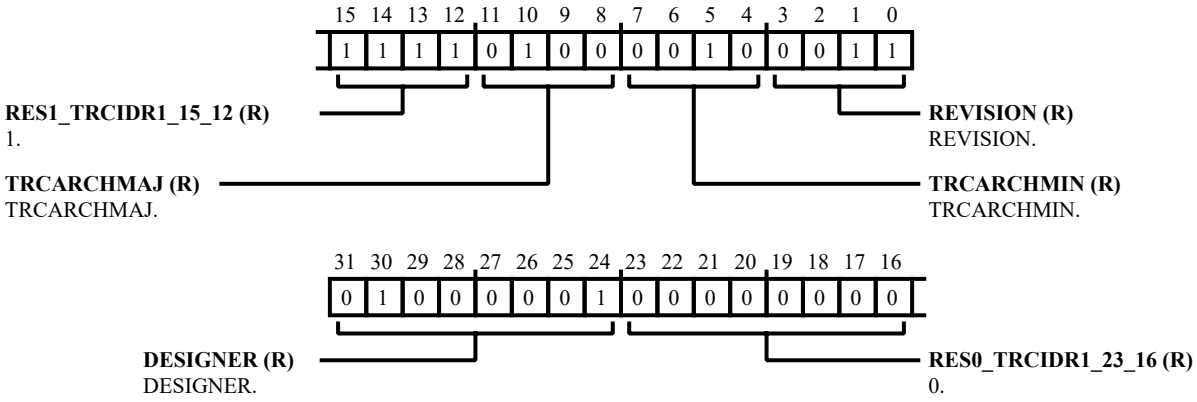

Figure 48-733: A55_C0_TRCIDR1 Register Diagram

Table 48-740: A55_C0_TRCIDR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/NW)	DESIGNER	DESIGNER.. Indicates which company designed the trace unit. The permitted values are: 01000001 ARM Limited. 01000100 Digital Equipment Corporation. 01001101 Motorola, Freescale Semiconductor Inc. 01010001 QUALCOMM Inc. 01010110 Marvell Semiconductor Inc. 01101001 Intel Corporation. All other values are reserved.	
		65	ARM Limited.
		68	Digital Equipment Corporation.
		77	Motorola, Freescale Semiconductor Inc.
		81	QUALCOMM Inc.
		86	Marvell Semiconductor Inc.
		105	Intel Corporation.
23:16 (R/NW)	RES0_TRCIDR1_23_16	0.. Reserved, RES0.	
15:12 (R/NW)	RES1_TRCIDR1_15_12	1.. Reserved, RES1.	
11:8 (R/NW)	TRCARCHMAJ	TRCARCHMAJ.. Indicates the major version of the ETM architecture. The permitted value is: 100 ETMv4. All other values are reserved.	
		4	ETMv4.

Table 48-740: A55_C0_TRCIDR1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:4 (R/NW)	TRCARCHMIN	TRCARCHMIN.. Indicates the minor version of the ETM architecture. The permitted value is: 0 ETMv4 minor version 0. All other values are reserved.	
		0	ETMv4 minor version 0.
3:0 (R/NW)	REVISION	REVISION.. Returns an IMPLEMENTATION DEFINED value that identifies the revision of the trace registers and the OS Save and Restore registers.ARM recommends:That the initial implementation sets REVISION==0x0 and the field then increments for any subsequent implementations. However, it is acceptable to omit some values or use another scheme to identify the revision number.That TRCPIDR2.REVISION==TRCIDR1.REVISION. However, in situations where it is difficult to align these fields, such as with a metal layer fix, then it is acceptable to change the REVISION fields independently.	

Trace ID Register 2.

Returns the maximum size of the data value, data address, VMID, Context ID and instruction address in the trace unit.

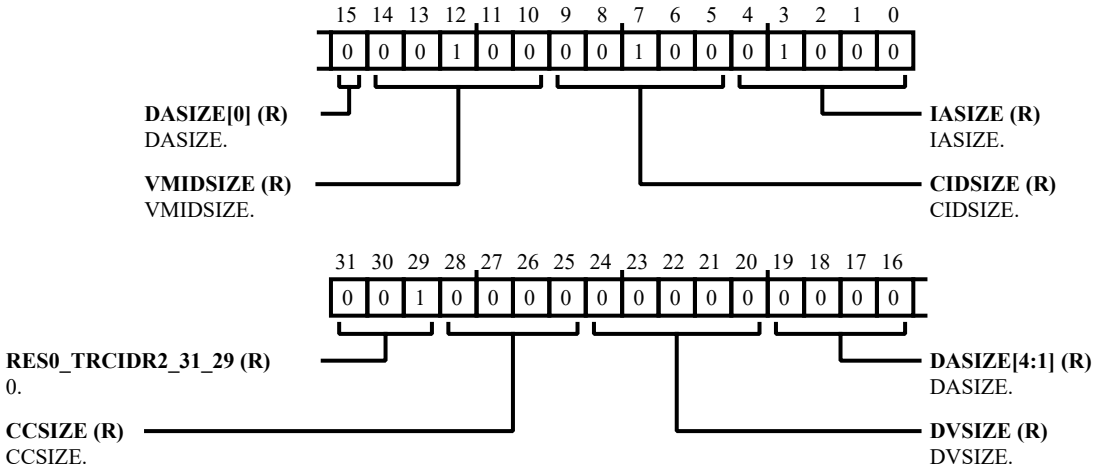

Figure 48-734: A55_C0_TRCIDR2 Register Diagram

Table 48-741: A55_C0_TRCIDR2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/NW)	RES0_TRCIDR2_31_29	0.. Reserved, RES0.	
28:25 (R/NW)	CCSIZE	CCSIZE.. Indicates the size of the cycle counter in bits minus 12. 0000 The cycle counter is 12 bits in length. 0001 The cycle counter is 13 bits in length. and so on up to 0b1000, indicating the cycle counter is 20 bits in length.All other values are reserved.If cycle counting is not implemented, as indicated by TRCIDR0.TRCCCI, this field is 0b0000.	
		0	The cycle counter is 12 bits in length.
		1	The cycle counter is 13 bits in length.

Table 48-741: A55_C0_TRCIDR2 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
24:20 (R/NW)	DVSIZE	DVSIZE.. Indicates the data value size in bytes. The permitted values are: 00000 Data value tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00. 00100 Maximum of 32-bit data value size. 01000 Maximum of 64-bit data value size. All other values are reserved.	
		0	Data value tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00.
		4	Maximum of 32-bit data value size.
		8	Maximum of 64-bit data value size.
19:15 (R/NW)	DASIZE	DASIZE.. Indicates the data address size in bytes. The permitted values are: 00000 Data address tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00. 00100 Maximum of 32-bit data address size. 01000 Maximum of 64-bit data address size. All other values are reserved.	
		0	Data address tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00.
		4	Maximum of 32-bit data address size.
		8	Maximum of 64-bit data address size.
14:10 (R/NW)	VMIDSIZE	VMIDSIZE.. Indicates the VMID size. The permitted values are: 00000 VMID tracing is not supported. 00001 Maximum of 8-bit VMID size, so TRCCONFIGR.VMID is supported. All other values are reserved.	
		0	VMID tracing is not supported.
		1	Maximum of 8-bit VMID size, so TRCCONFIGR.VMID is supported.
9:5 (R/NW)	CIDSIZE	CIDSIZE.. Indicates the Context ID size. The permitted values are: 00000 Context ID tracing is not supported. 00100 Maximum of 32-bit Context ID size, so TRCCONFIGR.CID is supported. All other values are reserved.	
		0	Context ID tracing is not supported.
		4	Maximum of 32-bit Context ID size, so TRCCONFIGR.CID is supported.

Table 48-741: A55_C0_TRCIDR2 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
4:0 (R/NW)	IASIZE	IASIZE.. Indicates the instruction address size. The permitted values are: 00100 Maximum of 32-bit address size. 01000 Maximum of 64-bit address size. All other values are reserved.	
		4	Maximum of 32-bit address size.
		8	Maximum of 64-bit address size.

Trace ID Register 3.

Indicates the features that the trace unit supports.

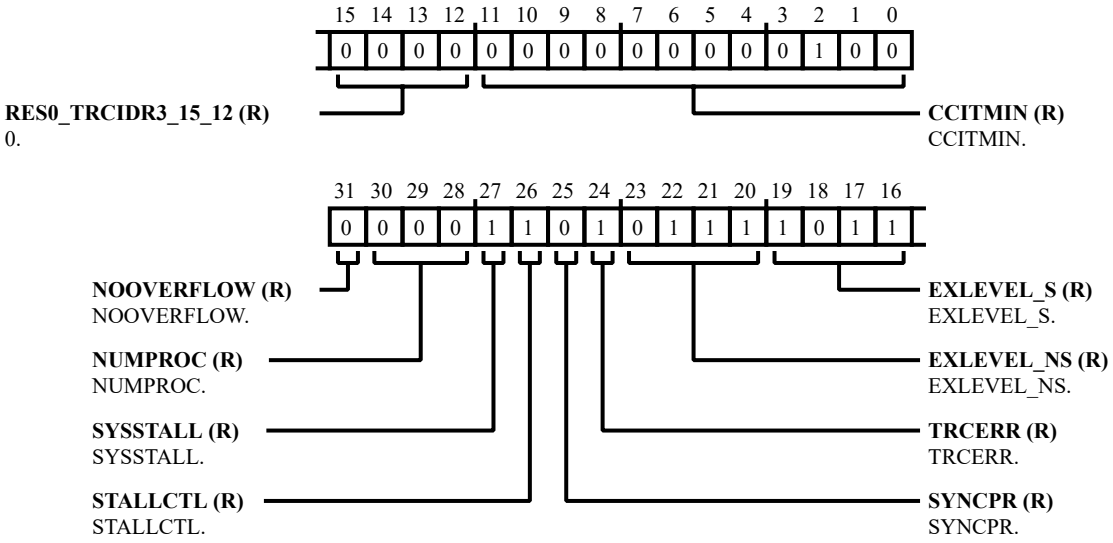

Figure 48-735: A55_C0_TRCIDR3 Register Diagram

Table 48-742: A55_C0_TRCIDR3 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/NW)	NOOVERFLOW	NOOVERFLOW.. Indicates if TRCSTALLCTLR.NOOVERFLOW is supported: 0 TRCSTALLCTLR.NOOVERFLOW is not supported, or STALLCTL==0. 1 TRCSTALLCTLR.NOOVERFLOW is supported.	
		0	TRCSTALLCTLR.NOOVERFLOW is not supported, or STALLCTL==0.
		1	TRCSTALLCTLR.NOOVERFLOW is supported.
30:28 (R/NW)	NUMPROC	NUMPROC.. Indicates the number of processors available for tracing. The possible values are: 000 The trace unit can trace one processor. 001 The trace unit can trace two processors. 010 The trace unit can trace three processors. and so on up to 0b111, which indicates the trace unit can trace eight processors.This field sets the maximum value of TRCPROCSELR.PROCSEL.	
		0	The trace unit can trace one processor.
		1	The trace unit can trace two processors.
		2	The trace unit can trace three processors.

Table 48-742: A55_C0_TRCIDR3 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
27 (R/NW)	SYSSTALL	SYSSTALL.. Indicates if the implementation can support stall control: 0 The system does not support stall control of the processor. 1 The system can support stall control of the processor. The system supports stalling of the processor only when SYSSTALL==1 and STALLCTL==1.	
		0	The system does not support stall control of the processor.
		1	The system can support stall control of the processor.
26 (R/NW)	STALLCTL	STALLCTL.. Indicates if TRCSTALLCTLR is supported: 0 TRCSTALLCTLR is not supported. 1 TRCSTALLCTLR is supported.	
		0	TRCSTALLCTLR is not supported.
		1	TRCSTALLCTLR is supported.
25 (R/NW)	SYNCPR	SYNCPR.. Indicates if an implementation has a fixed synchronization period: 0 TRCSYNCPR is read-write so software can change the synchronization period. 1 TRCSYNCPR is read-only so the synchronization period is fixed.	
		0	TRCSYNCPR is read-write so software can change the synchronization period.
		1	TRCSYNCPR is read-only so the synchronization period is fixed.
24 (R/NW)	TRCERR	TRCERR.. Indicates if TRCVICTLR.TRCERR is supported: 0 TRCVICTLR.TRCERR is not supported 1 TRCVICTLR.TRCERR is supported.	
		0	TRCVICTLR.TRCERR is not supported.
		1	TRCVICTLR.TRCERR is supported.

Table 48-742: A55_C0_TRCIDR3 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:20 (R/NW)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit indicates whether instruction tracing is supported for the corresponding exception level: 0 In Non-secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are not supported. 1 In Non-secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are supported. The exception levels are:Bit[20]Exception level 0.Bit[21]Exception level 1.Bit[22]Exception level 2.Bit[23]SBZ. EXLEVEL_NS[3] is never implemented.	
		0	In Non-secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are not supported.
		1	In Non-secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are supported.
19:16 (R/NW)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit indicates whether instruction tracing is supported for the corresponding exception level: 0 In Secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are not supported. 1 In Secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are supported. The exception levels are:Bit[16]Exception level 0.Bit[17]Exception level 1.Bit[18]SBZ. EXLEVEL_S[2] is never implemented.Bit[19]Exception level 3.	
		0	In Secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are not supported.
		1	In Secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are supported.
15:12 (R/NW)	RES0_TRCIDR3_15_12	0.. Reserved, RES0.	
11:0 (R/NW)	CCITMIN	CCITMIN.. Indicates the minimum value that can be programmed in TRCCCCTLR.THRESHOLD.When cycle counting in the instruction trace is supported, that is TRCIDR0.TRCCCI==1, then the minimum value of this field is 0x001, otherwise it is 0x000.	

Trace ID Register 4.

Returns how many resources the trace unit supports.

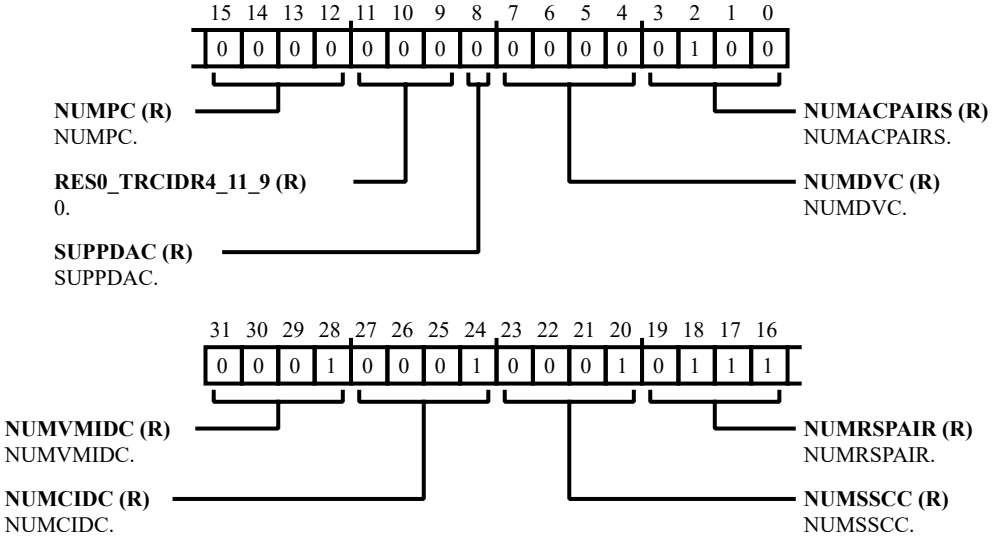

Figure 48-736: A55_C0_TRCIDR4 Register Diagram

Table 48-743: A55_C0_TRCIDR4 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:28 (R/NW)	NUMVMIDC	NUMVMIDC.. Indicates the number of VMID comparators that are available for tracing. The permitted values are: 0000 No VMID comparators are available. 0001 The implementation has one VMID comparator. 0010 The implementation has two VMID comparators. and so on up to 0b1000, which indicates that the implementation has eight VMID comparators.All other values are reserved.	
		0	No VMID comparators are available.
		1	The implementation has one VMID comparator.
		2	The implementation has two VMID comparators.
27:24 (R/NW)	NUMCIDC	NUMCIDC.. Indicates the number of Context ID comparators that are available for tracing. The permitted values are: 0000 No Context ID comparators are available. 0001 The implementation has one Context ID comparator. 0010 The implementation has two Context ID comparators. and so on up to 0b1000, which indicates that the implementation has eight Context ID comparators.All other values are reserved.	
		0	No Context ID comparators are available.
		1	The implementation has one Context ID comparator.
		2	The implementation has two Context ID comparators.

Table 48-743: A55_C0_TRCIDR4 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:20 (R/NW)	NUMSSCC	NUMSSCC.. Indicates the number of single-shot comparator controls that are available for tracing. The permitted values are: 0000 No single-shot comparator controls are available. 0001 The implementation has one single-shot comparator control. 0010 The implementation has two single-shot comparator controls. and so on up to 0b1000, which indicates that the implementation has eight single-shot comparator controls.All other values are reserved.	
		0	No single-shot comparator controls are available.
		1	The implementation has one single-shot comparator control.
		2	The implementation has two single-shot comparator controls.
19:16 (R/NW)	NUMRSPAIR	NUMRSPAIR.. Indicates the number of resource selection pairs that are available for tracing. The permitted values are: 0000 The implementation has one resource selection pair. 0001 The implementation has two resource selection pairs. 0010 The implementation has three resource selection pairs. and so on up to 0b1111, which indicates that the implementation has 16 resource selection pairs.Implementations always have at least one resource selection pair so that they can support the FALSE and TRUE resource selectors, 0 and 1.	
		0	The implementation has one resource selection pair.
		1	The implementation has two resource selection pairs.
		2	The implementation has three resource selection pairs.
15:12 (R/NW)	NUMPC	NUMPC.. Indicates the number of processor comparator inputs that are available for tracing. The permitted values are: 0000 No processor comparator inputs are available. 0001 The implementation has one processor comparator input. 0010 The implementation has two processor comparator inputs. and so on up to 0b1000, which indicates that the implementation has eight processor comparator inputs.All other values are reserved.	
		0	No processor comparator inputs are available.
		1	The implementation has one processor comparator input.
		2	The implementation has two processor comparator inputs.
11:9 (R/NW)	RES0_TRCIDR4_11_9	0.. Reserved, RES0.	

Table 48-743: A55_C0_TRCIDR4 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
8 (R/NW)	SUPPDAC	SUPPDAC.. Indicates if the implementation can support data address comparisons: 0 The implementation does not support data address comparisons. 1 The implementation can support data address comparisons.	
		0	The implementation does not support data address comparisons.
		1	The implementation can support data address comparisons.
7:4 (R/NW)	NUMDVC	NUMDVC.. Indicates the number of data value comparators that are available for tracing. The permitted values are: 0000 No data value comparators are available. 0001 The implementation has one data value comparator. 0010 The implementation has two data value comparators. and so on up to 0b1000, which indicates that the implementation has eight data value comparators.All other values are reserved.	
		0	No data value comparators are available.
		1	The implementation has one data value comparator.
		2	The implementation has two data value comparators.
3:0 (R/NW)	NUMACPAIRS	NUMACPAIRS.. Indicates the number of address comparator pairs that are available for tracing. The permitted values are: 0000 No address comparator pairs are available. 0001 The implementation has one address comparator pair. 0010 The implementation has two address comparator pairs. and so on up to 0b1000, which indicates that the implementation has eight address comparator pairs.All other values are reserved.	
		0	No address comparator pairs are available.
		1	The implementation has one address comparator pair.
		2	The implementation has two address comparator pairs.

Trace ID Register 5.

Indicates the features that the trace unit supports.

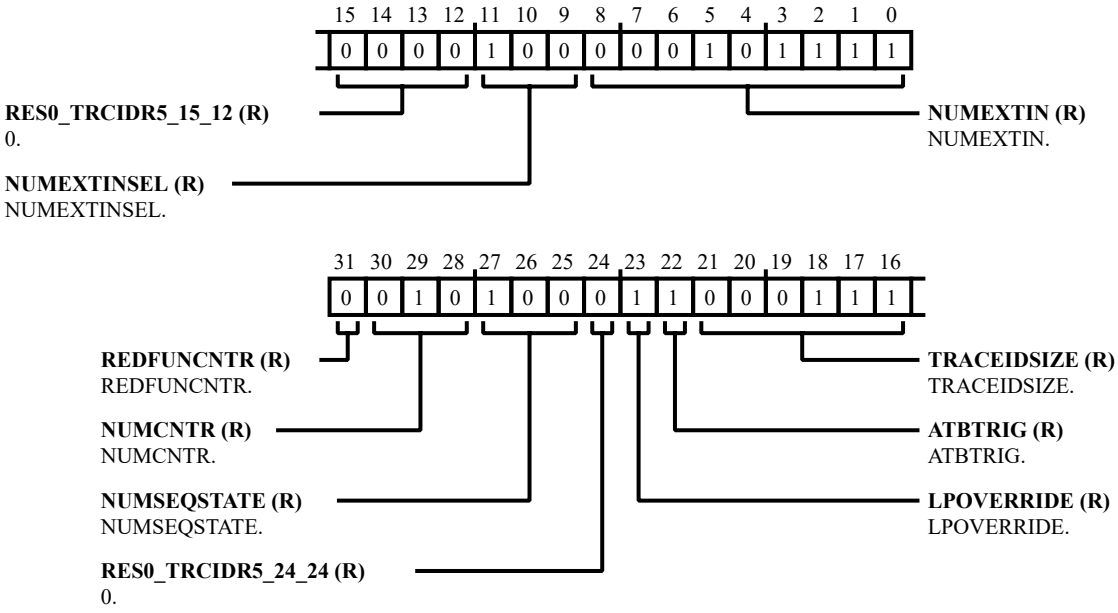

Figure 48-737: A55_C0_TRCIDR5 Register Diagram

Table 48-744: A55_C0_TRCIDR5 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/NW)	REDFUNCNTR	REDFUNCNTR.. Indicates if the reduced function counter is implemented: 0 The reduced function counter is not supported. 1 Counter 0 is implemented as a reduced function counter.	
		0	The reduced function counter is not supported.
		1	Counter 0 is implemented as a reduced function counter.
30:28 (R/NW)	NUMCNTR	NUMCNTR.. Indicates the number of counters that are available for tracing. The permitted values are: 000 No counters are available. 001 The implementation has one counter. 010 The implementation has two counters. 011 The implementation has three counters. 100 The implementation has four counters. All other values are reserved.	
		0	No counters are available.
		1	The implementation has one counter.
		2	The implementation has two counters.
		3	The implementation has three counters.

Table 48-744: A55_C0_TRCIDR5 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
		4	The implementation has four counters.
27:25 (R/NW)	NUMSEQSTATE	NUMSEQSTATE.. Indicates the number of sequencer states that are implemented. The permitted values are: 000 No sequencer states are implemented. 100 The implementation has four sequencer states. All other values are reserved.	
		0	No sequencer states are implemented.
		4	The implementation has four sequencer states.
24 (R/NW)	RES0_TRCIDR5_24_24	0.. Reserved, RES0.	
23 (R/NW)	LPOVERRIDE	LPOVERRIDE.. Indicates if the implementation can support low-power state override: 0 The implementation does not support low-power state override. 1 The implementation supports low-power state override, and the TRCEVENTCTL1R.LPOVERRIDE field is implemented. The trace unit must support low-power state override if it can enter a low-power mode where the resources and event trace generation are disabled.	
		0	The implementation does not support low-power state override.
		1	The implementation supports low-power state override, and the TRCEVENTCTL1R.LPOVERRIDE field is implemented.
22 (R/NW)	ATBTRIG	ATBTRIG.. Indicates if the implementation can support ATB triggers: 0 The implementation does not support ATB triggers. 1 The implementation supports ATB triggers, and the TRCEVENTCTL1R.ATBTRIG field is implemented.	
		0	The implementation does not support ATB triggers.
		1	The implementation supports ATB triggers, and the TRCEVENTCTL1R.ATBTRIG field is implemented.
21:16 (R/NW)	TRACEIDSIZE	TRACEIDSIZE.. Indicates the trace ID width. The permitted value is: 111 The implementation supports a 7-bit trace ID. This sets the width of the TRCTRACEIDR.TRACEID field. All other values are reserved.The CoreSight ATB requires a 7-bit trace ID width.	
		7	The implementation supports a 7-bit trace ID. This sets the width of the TRCTRACEIDR.TRACEID field.
15:12 (R/NW)	RES0_TRCIDR5_15_12	0.. Reserved, RES0.	

Table 48-744: A55_C0_TRCIDR5 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
11:9 (R/NW)	NUMEXTINSEL	NUMEXTINSEL.. Indicates how many external input select resources are implemented. The permitted values are: 000 No external input select resources are available. If NUMEXTINSEL is zero, NUMEXTIN must also be zero. 001 The implementation has one external input select resource. 010 The implementation has two external input select resources. 011 The implementation has three external input select resources. 100 The implementation has four external input select resources. All other values are reserved.See TRCEXTINSELR for how to select an input select resource.	
		0	No external input select resources are available. If NUMEXTINSEL is zero, NUMEXTIN must also be zero.
		1	The implementation has one external input select resource.
		2	The implementation has two external input select resources.
		3	The implementation has three external input select resources.
		4	The implementation has four external input select resources.
8:0 (R/NW)	NUMEXTIN	NUMEXTIN.. Indicates how many external inputs are implemented. The permitted values are: 000000000 No external inputs are available. If NUMEXTIN is zero, NUMEXTINSEL must also be zero. 000000001 The implementation has one external input. 000000010 The implementation has two external inputs. and so on up to 0b100000000, which indicates that the implementation has 256 external inputs.All other values >0b100000000 are reserved.See TRCEXTINSELR for how to select an external input.	
		0	No external inputs are available. If NUMEXTIN is zero, NUMEXTINSEL must also be zero.
		1	The implementation has one external input.
		2	The implementation has two external inputs.

Trace IMPLEMENTATION DEFINED Register 0.

TRCIMSPEC0 shows the presence of any IMPLEMENTATION DEFINED features, and provides an interface to enable the features that are provided. The TRCIMSPECn registers are reserved for the future implementation of up to eight IMPLEMENTATION DEFINED registers. When a trace unit does not implement these registers, TRCIMSPEC0 must still be partially implemented so that a debugger can implement a general mechanism for detecting the IMPLEMENTATION DEFINED registers.

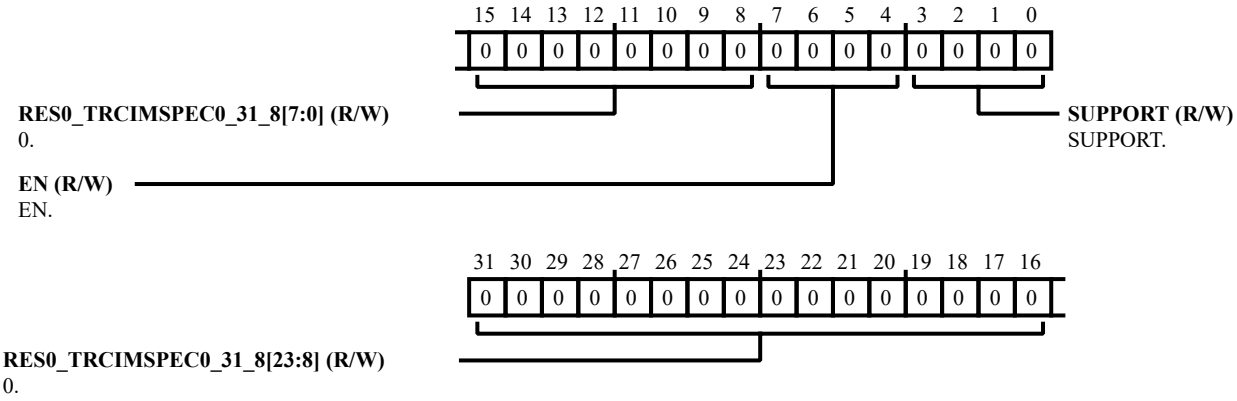

Figure 48-738: A55_C0_TRCIMSPEC0 Register Diagram

Table 48-745: A55_C0_TRCIMSPEC0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:8 (R/W)	RES0_TRCIM-SPEC0_31_8	0.. Reserved, RES0.	
7:4 (R/W)	EN	EN.. If SUPPORT is not 0b0000, controls whether the IMPLEMENTATION DEFINED features are enabled. The permitted values are: 0000 The IMPLEMENTATION DEFINED features are not enabled. The trace unit must behave as if the IMPLEMENTATION DEFINED features are not supported. and any other value, which indicates that the trace unit behavior is IMPLEMENTATION DEFINED.If SUPPORT is 0b0000, this field is RES0.	
		0	The IMPLEMENTATION DEFINED features are not enabled. The trace unit must behave as if the IMPLEMENTATION DEFINED features are not supported.

Table 48-745: A55_C0_TRCIMSPEC0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	SUPPORT	SUPPORT.. Indicates whether the implementation supports IMPLEMENTATION DEFINED features. The permitted values are: 0000 No IMPLEMENTATION DEFINED features are supported. The EN field is RES0. and any other value, which indicates that IMPLEMENTATION DEFINED features are supported. Use of these values requires written permission from ARM.	
		0	No IMPLEMENTATION DEFINED features are supported. The EN field is RES0.

Integration ATB Identification Register.

Integration ATB Identification Register.

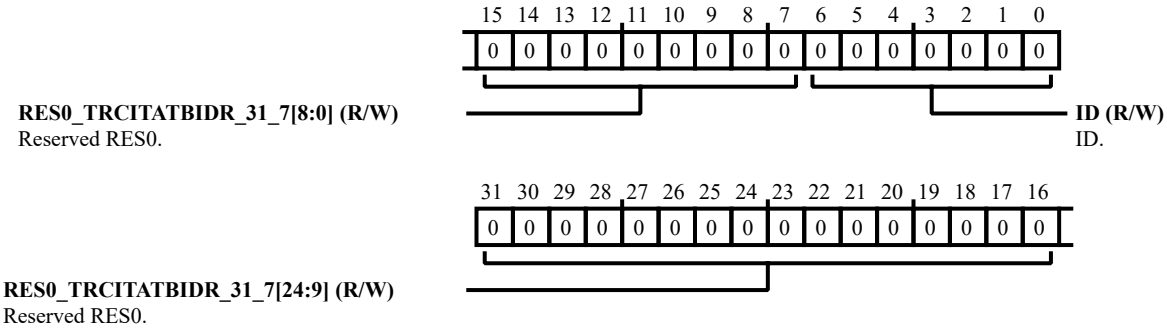

Figure 48-739: A55_C0_TRCITATBIDR Register Diagram

Table 48-746: A55_C0_TRCITATBIDR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:7 (R/W)	RES0_TRCITAT-BIDR_31_7	Reserved RES0.. Reserved RES0.
		0
6:0 (R/W)	ID	ID.. Drives the ATIDMn[6:0] output pins.

Trace Integration Mode Control Register.

Controls whether the trace unit is in integration mode.

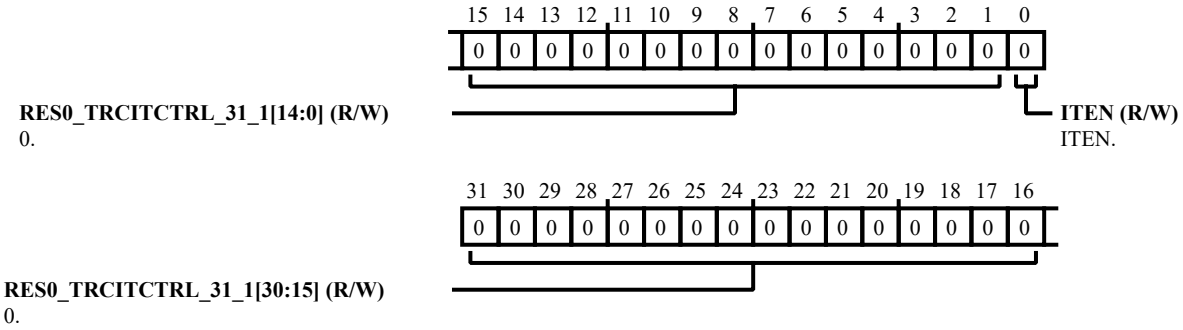

Figure 48-740: A55_C0_TRCITCTRL Register Diagram

Table 48-747: A55_C0_TRCITCTRL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_TRCITCTRL_31_1	0.. Reserved, RES0.	
0 (R/W)	ITEN	ITEN.. Integration mode enable bit: 0 The trace unit is not in integration mode. 1 The trace unit is in integration mode. This mode enables a debug agent to perform topology detection, and System-on-Chip (SoC) test software to perform integration testing.	
		0	The trace unit is not in integration mode.
		1	The trace unit is in integration mode. This mode enables a debug agent to perform topology detection, and System-on-Chip (SoC) test software to perform integration testing.

Integration Instruction ATB In Register.

Integration Instruction ATB In Register.

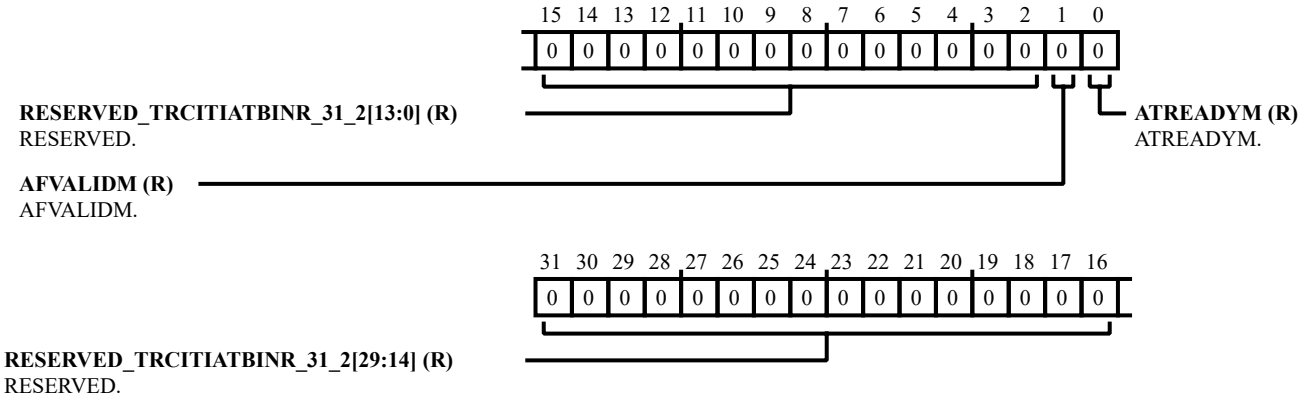

Figure 48-741: A55_C0_TRCITIATBINR Register Diagram

Table 48-748: A55_C0_TRCITIATBINR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/NW)	RESERVED_TRCITIAT-BINR_31_2	RESERVED.. Reserved. Read undefined.
1 (R/NW)	AFVALIDM	AFVALIDM.. Returns the value of the AFVALIDMn input pin.
0 (R/NW)	ATREADYM	ATREADYM.. Returns the value of the ATREADYMn input pin.

Integration Instruction ATB Out Register.

Integration Instruction ATB Out Register.

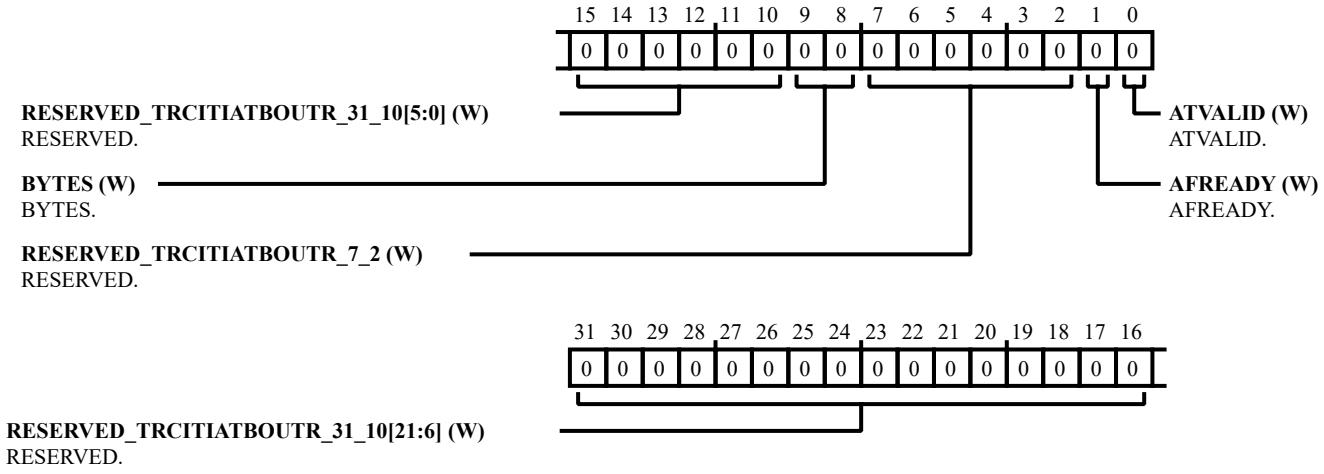

Figure 48-742: A55_C0_TRCITIATBOUTR Register Diagram

Table 48-749: A55_C0_TRCITIATBOUTR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:10 (RX/W)	RESERVED_TRCITIAT-BOUTR_31_10	RESERVED.. Reserved. Read undefined.
9:8 (RX/W)	BYTES	BYTES.. Drives the ATBYTESMn[1:0] output pins.
7:2 (RX/W)	RESERVED_TRCITIAT-BOUTR_7_2	RESERVED.. Reserved. Read undefined.
1 (RX/W)	AFREADY	AFREADY.. Drives the AFREADYMn output pin.
0 (RX/W)	ATVALID	ATVALID.. Drives the ATVALIDMn output pin.

Integration Instruction ATB Data Register.

Integration Instruction ATB Data Register.

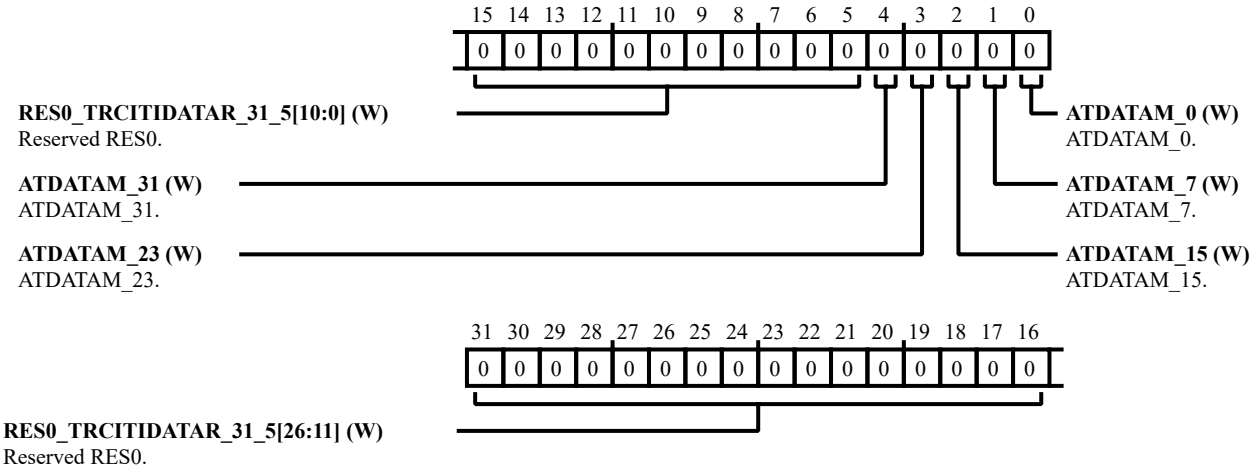

Figure 48-743: A55_C0_TRCITIDATAR Register Diagram

Table 48-750: A55_C0_TRCITIDATAR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:5 (RX/W)	RES0_TRCITIDA-TAR_31_5	Reserved RES0.. Reserved RES0.	
		0	Reserved.
4 (RX/W)	ATDATAM_31	ATDATAM_31.. Drives the ATDATAM[31] output.	
3 (RX/W)	ATDATAM_23	ATDATAM_23.. Drives the ATDATAM[23] output.	
2 (RX/W)	ATDATAM_15	ATDATAM_15.. Drives the ATDATAM[15] output.	
1 (RX/W)	ATDATAM_7	ATDATAM_7.. Drives the ATDATAM[7] output.	
0 (RX/W)	ATDATAM_0	ATDATAM_0.. Drives the ATDATAM[0] output.	

Trace OS Lock Access Register.

Controls whether the OS Lock is locked.

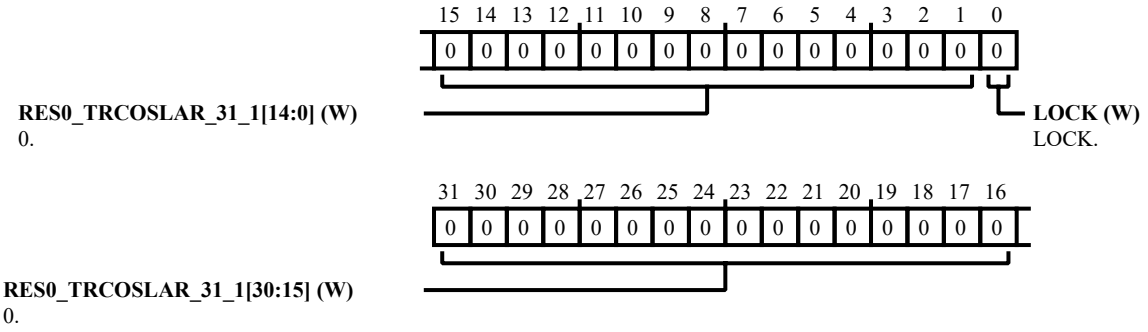

Figure 48-744: A55_C0_TRCOSLAR Register Diagram

Table 48-751: A55_C0_TRCOSLAR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (RX/W)	RES0_TRCOSLAR_31_1	0.. Reserved, RES0.	
0 (RX/W)	LOCK	LOCK.. OS Lock control bit: 0 Unlocks the OS Lock. 1 Locks the OS Lock. This setting disables the trace unit.	
		0	Unlocks the OS Lock.
		1	Locks the OS Lock. This setting disables the trace unit.

Trace OS Lock Status Register.

Returns the status of the OS Lock.

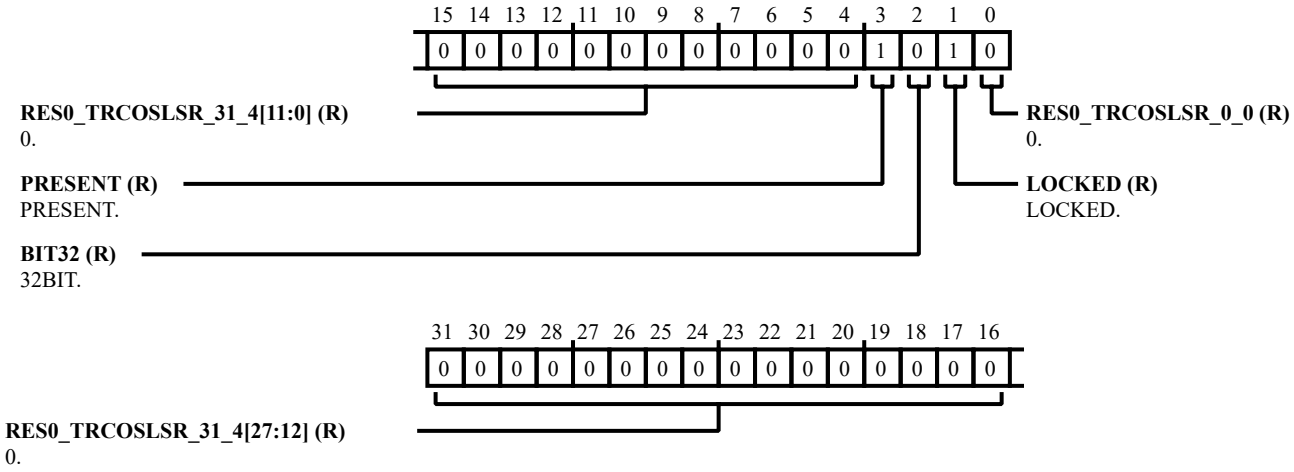

Figure 48-745: A55_C0_TRCOSLSR Register Diagram

Table 48-752: A55_C0_TRCOSLSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/NW)	RES0_TRCOSLSR_31_4	0.. Reserved, RES0.	
3 (R/NW)	PRESENT	PRESENT.. Indicates whether the OS Lock is implemented.This bit is RES1, which indicates that the OS Lock is always implemented.	
2 (R/NW)	BIT32	32BIT.. This bit is RES0, which indicates that software must perform a 32-bit write to update the TRCOSLAR.	
1 (R/NW)	LOCKED	LOCKED.. OS Lock status bit: 0 The OS Lock is unlocked. 1 The OS Lock is locked. When the trace unit core power domain is powered down the value is UNKNOWN. The TRCPDSR indicates if the trace unit core power domain is powered down.	
		0	The OS Lock is unlocked.
		1	The OS Lock is locked.
0 (R/NW)	RES0_TRCOSLSR_0_0	0.. Reserved, RES0.	

Trace PowerDown Status Register.

Returns information about the OS Lock status, core power domain status and power interruption status for the trace unit.

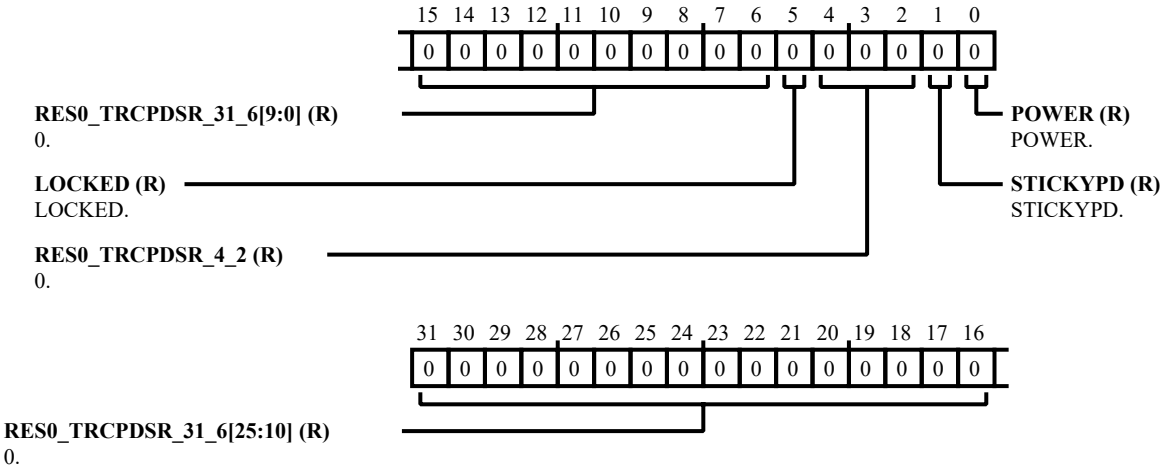

Figure 48-746: A55_C0_TRCPDSR Register Diagram

Table 48-753: A55_C0_TRCPDSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:6 (R/NW)	RES0_TRCPDSR_31_6	0.. Reserved, RES0.	
5 (R/NW)	LOCKED	LOCKED.. OS Lock status bit: 0 The OS Lock is unlocked. 1 The OS Lock is locked. The value is UNKNOWN when the trace unit core power domain is powered down, that is, when POWER==0.	
		0	The OS Lock is unlocked.
		1	The OS Lock is locked.
4:2 (R/NW)	RES0_TRCPDSR_4_2	0.. Reserved, RES0.	

Table 48-753: A55_C0_TRCPDSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/NW)	STICKYPD	STICKYPD.. Sticky powerdown status bit. Indicates whether the trace register state is valid: 0 If POWER==1 then the state of TRCOSLSR and the trace registers are valid. If POWER==0 then it is UNKNOWN whether the state of TRCOSLSR and the trace registers are valid. 1 The state of TRCOSLSR and the trace registers might not be valid. The trace unit sets this bit to 1 if either the trace unit is reset, or the power to the trace unit core power domain is removed and the trace register state is not valid. After this register is read, if the Software Lock is unlocked and the trace unit core power domain is powered up, then the trace unit sets this bit to 0. The TRCLAR controls whether the Software Lock is locked.	
		0	If POWER==1 then the state of TRCOSLSR and the trace registers are valid. If POWER==0 then it is UNKNOWN whether the state of TRCOSLSR and the trace registers are valid.
		1	The state of TRCOSLSR and the trace registers might not be valid. The trace unit sets this bit to 1 if either the trace unit is reset, or the power to the trace unit core power domain is removed and the trace register state is not valid.
0 (R/NW)	POWER	POWER.. Power status bit: 0 The trace unit core power domain is not powered. The trace registers are not accessible and they all return an error response. 1 The trace unit core power domain is powered. The trace registers are accessible.	
		0	The trace unit core power domain is not powered. The trace registers are not accessible and they all return an error response.
		1	The trace unit core power domain is powered. The trace registers are accessible.

Trace Programming Control Register.

Enables the trace unit.

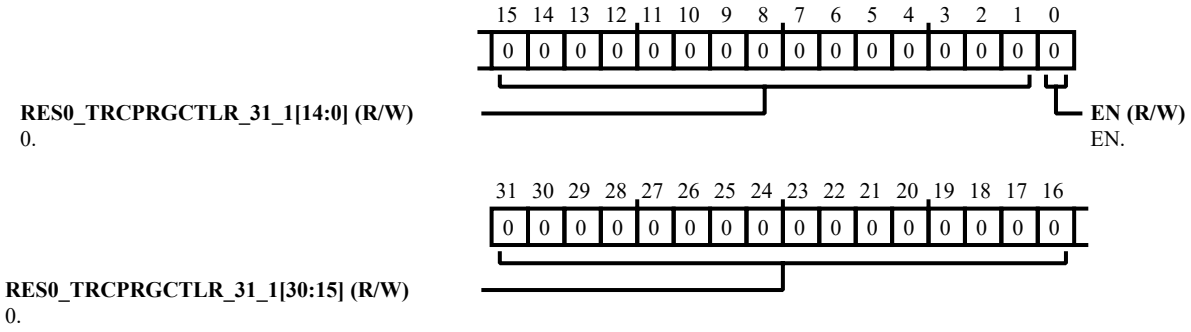

Figure 48-747: A55_C0_TRCPRGCTLR Register Diagram

Table 48-754: A55_C0_TRCPRGCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_TRCPRGCTLR_31_1	0.. Reserved, RES0.	
0 (R/W)	EN	EN.. Trace unit enable bit. Possible values are: 0 The trace unit is disabled. All trace resources are inactive and no trace is generated. 1 The trace unit is enabled.	
		0	The trace unit is disabled. All trace resources are inactive and no trace is generated.
		1	The trace unit is enabled.

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

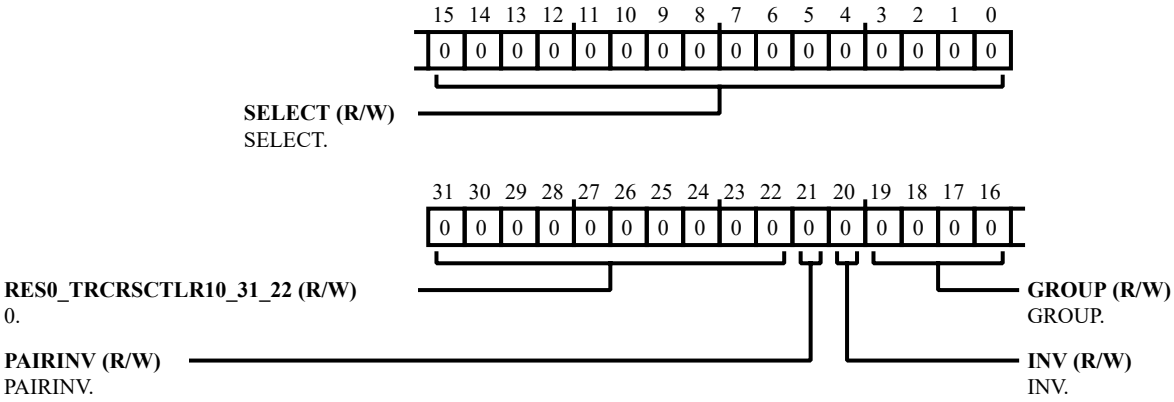

Figure 48-748: A55_C0_TRCRSCTLR10 Register Diagram

Table 48-755: A55_C0_TRCRSCTLR10 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR10_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-755: A55_C0_TRCRSCTLR10 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

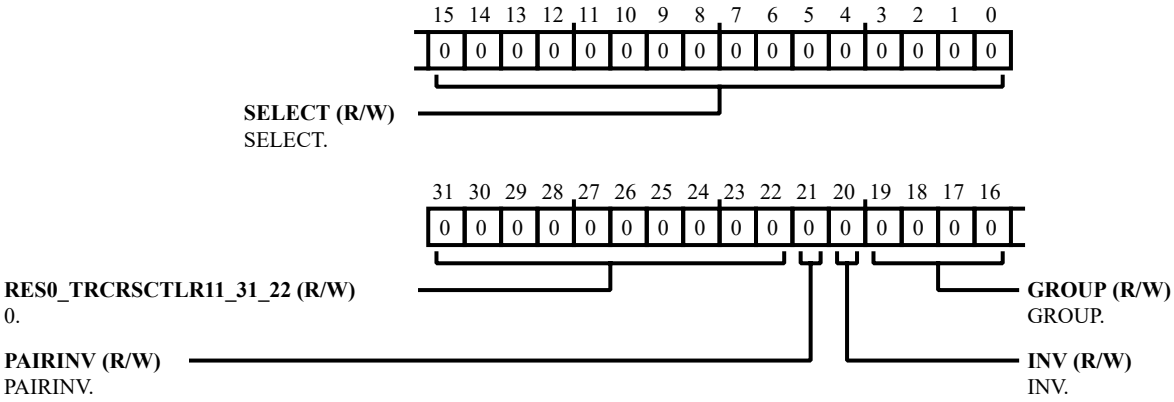

Figure 48-749: A55_C0_TRCRSCTLR11 Register Diagram

Table 48-756: A55_C0_TRCRSCTLR11 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR11_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-756: A55_C0_TRCRSCTLR11 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

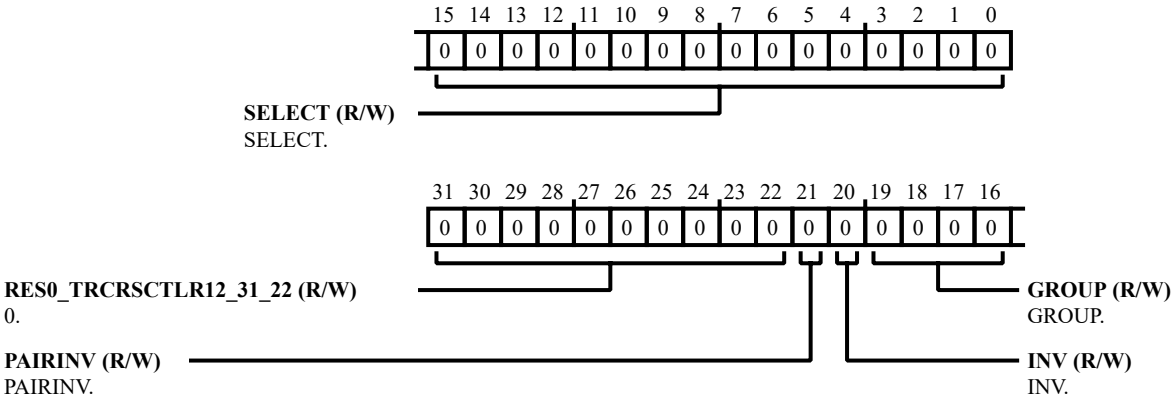

Figure 48-750: A55_C0_TRCRSCTLR12 Register Diagram

Table 48-757: A55_C0_TRCRSCTLR12 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR12_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-757: A55_C0_TRCRSCTLR12 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

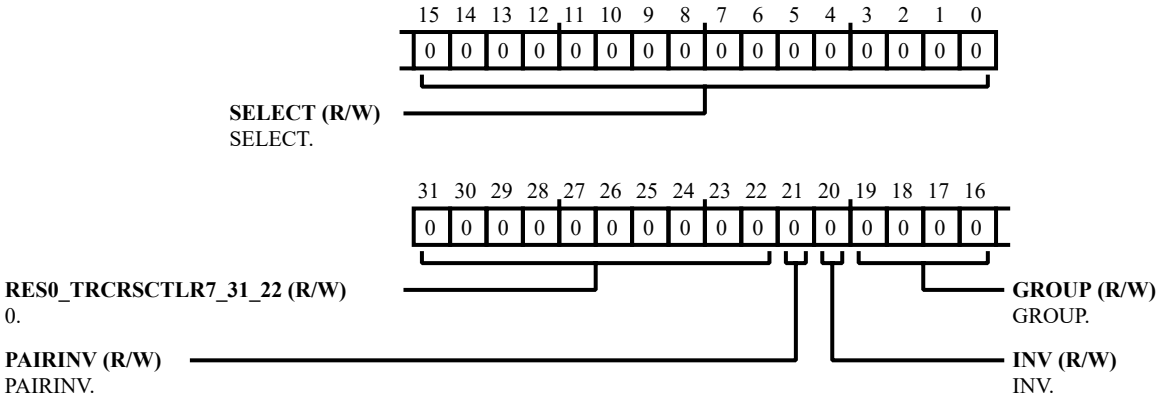

Figure 48-759: A55_C0_TRCRSCTLR7 Register Diagram

Table 48-766: A55_C0_TRCRSCTLR7 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR7_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-766: A55_C0_TRCRSCTLR7 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

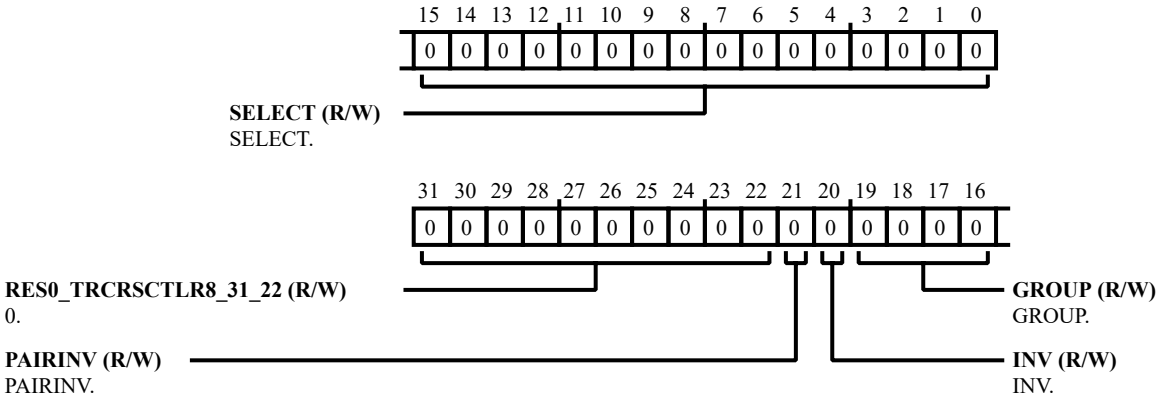

Figure 48-760: A55_C0_TRCRSCTLR8 Register Diagram

Table 48-767: A55_C0_TRCRSCTLR8 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR8_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-767: A55_C0_TRCRSCTLR8 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

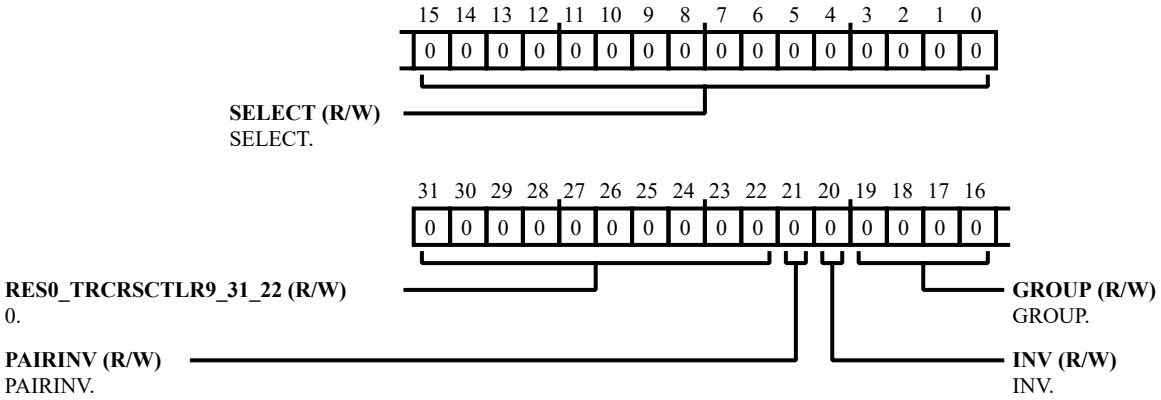

Figure 48-761: A55_C0_TRCRSCTLR9 Register Diagram

Table 48-768: A55_C0_TRCRSCTLR9 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR9_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-768: A55_C0_TRCRSCTLR9 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Sequencer State Transition Control Registers.

Moves the sequencer state backwards (from state n+1 to state n) when a programmed event occurs, and forwards (from state n to state n+1) when a programmed event occurs.

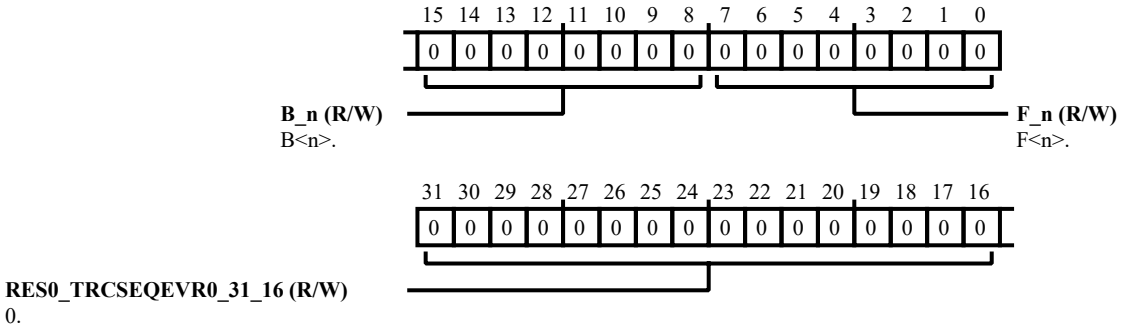

Figure 48-762: A55_C0_TRCSEQEVR0 Register Diagram

Table 48-769: A55_C0_TRCSEQEVR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCSE-QEVR0_31_16	0.. Reserved, RES0.
15:8 (R/W)	B_N	B<n>.. Backward field. Contains an event number. When the event occurs then the sequencer state moves from state n+1 to state n.For example, for TRCSEQEVR2, if B2==0x14 then when event 0x14 occurs, the sequencer moves from state 3 to state 2.
7:0 (R/W)	F_N	F<n>.. Forward field. Contains an event number. When the event occurs then the sequencer state moves from state n to state n+1.For example, for TRCSEQEVR1, if F1==0x12 then when event 0x12 occurs, the sequencer moves from state 1 to state 2.

Trace Sequencer State Transition Control Registers.

Moves the sequencer state backwards (from state n+1 to state n) when a programmed event occurs, and forwards (from state n to state n+1) when a programmed event occurs.

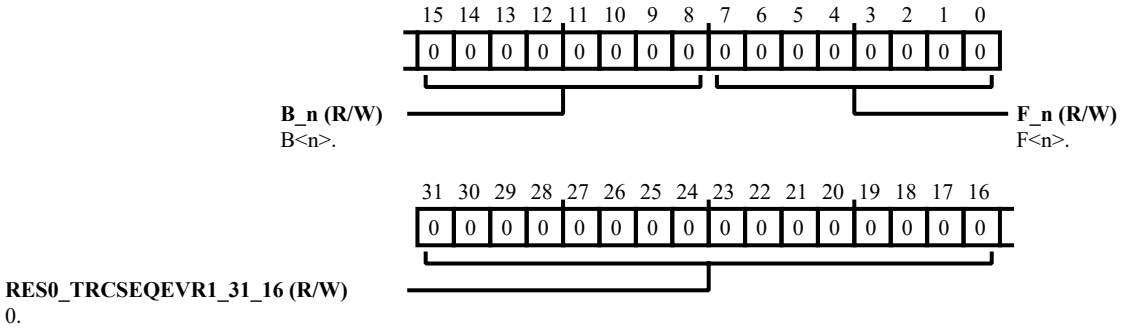

Figure 48-763: A55_C0_TRCSEQEVR1 Register Diagram

Table 48-770: A55_C0_TRCSEQEVR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCSE-QEVR1_31_16	0.. Reserved, RES0.
15:8 (R/W)	B_N	B<n>.. Backward field. Contains an event number. When the event occurs then the sequencer state moves from state n+1 to state n.For example, for TRCSEQEVR2, if B2==0x14 then when event 0x14 occurs, the sequencer moves from state 3 to state 2.
7:0 (R/W)	F_N	F<n>.. Forward field. Contains an event number. When the event occurs then the sequencer state moves from state n to state n+1.For example, for TRCSEQEVR1, if F1==0x12 then when event 0x12 occurs, the sequencer moves from state 1 to state 2.

Trace Sequencer State Transition Control Registers.

Moves the sequencer state backwards (from state n+1 to state n) when a programmed event occurs, and forwards (from state n to state n+1) when a programmed event occurs.

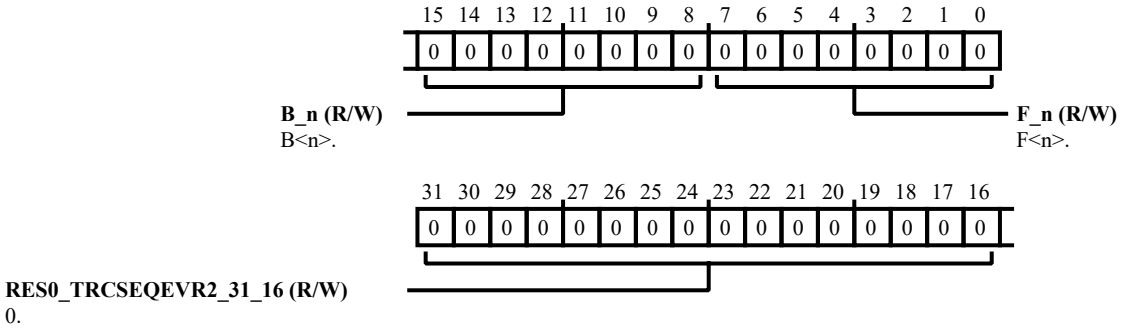

Figure 48-764: A55_C0_TRCSEQEVR2 Register Diagram

Table 48-771: A55_C0_TRCSEQEVR2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCSE-QEVR2_31_16	0.. Reserved, RES0.
15:8 (R/W)	B_N	B<n>.. Backward field. Contains an event number. When the event occurs then the sequencer state moves from state n+1 to state n.For example, for TRCSEQEVR2, if B2==0x14 then when event 0x14 occurs, the sequencer moves from state 3 to state 2.
7:0 (R/W)	F_N	F<n>.. Forward field. Contains an event number. When the event occurs then the sequencer state moves from state n to state n+1.For example, for TRCSEQEVR1, if F1==0x12 then when event 0x12 occurs, the sequencer moves from state 1 to state 2.

Trace Sequencer Reset Control Register.

Moves the sequencer to state 0 when a programmed event occurs.

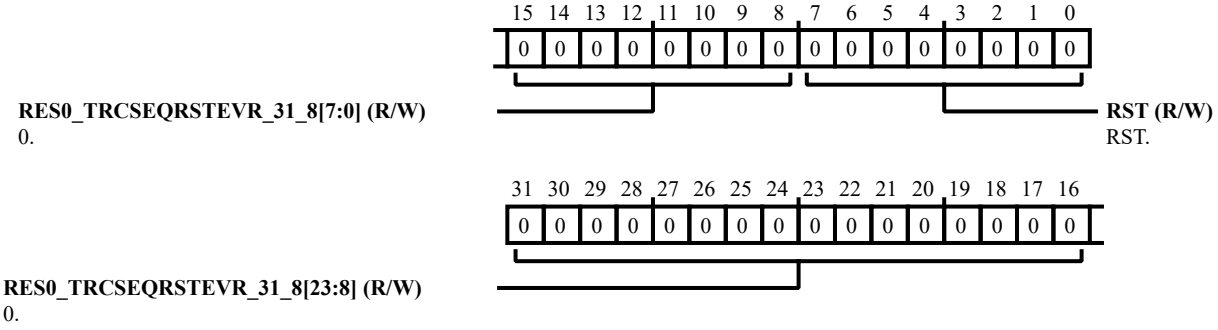

Figure 48-765: A55_C0_TRCSEQRSTEVR Register Diagram

Table 48-772: A55_C0_TRCSEQRSTEVR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_TRCSEQR-STEVR_31_8	0.. Reserved, RES0.
7:0 (R/W)	RST	RST.. Contains an event number. When the event occurs then the sequencer state moves to state 0.

Trace Sequencer State Register.

Use this to set, or read, the sequencer state.

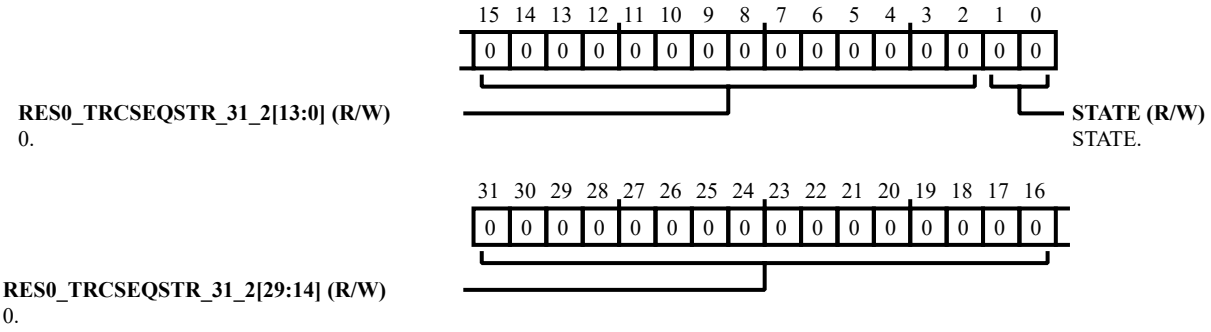

Figure 48-766: A55_C0_TRCSEQSTR Register Diagram

Table 48-773: A55_C0_TRCSEQSTR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:2 (R/W)	RES0_TRCSEQSTR_31_2	0.. Reserved, RES0.	
1:0 (R/W)	STATE	STATE.. Sets or returns the state of the sequencer: 00 State 0. 01 State 1. 10 State 2. 11 State 3.	
		0	State 0.
		1	State 1.
		2	State 2.
		3	State 3.

Trace Single-Shot Comparator Control Registers.

Controls the corresponding single-shot comparator resource.

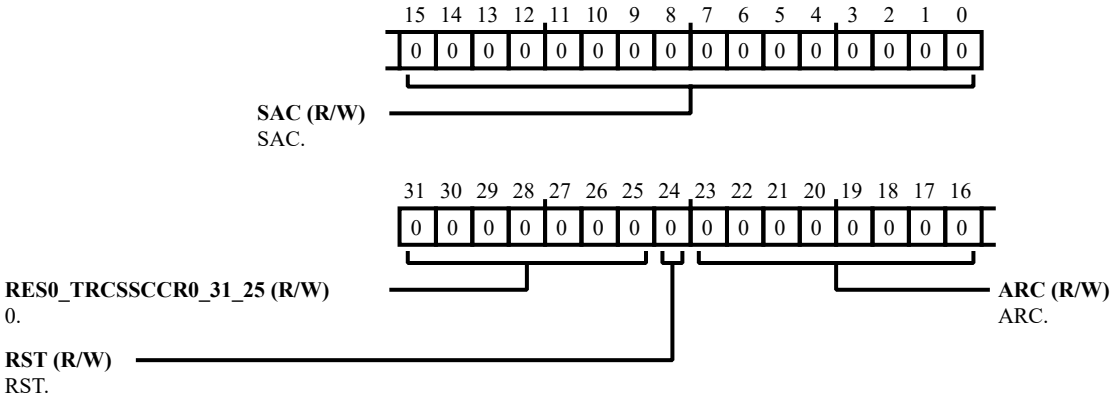

Figure 48-767: A55_C0_TRCSSCCR0 Register Diagram

Table 48-774: A55_C0_TRCSSCCR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:25 (R/W)	RES0_TRCSSCCR0_31_25	0.. Reserved, RES0.	
24 (R/W)	RST	RST.. Controls whether the single-shot comparator resource is reset when it fires. 0 When the single-shot comparator resource fires, it is not reset. 1 When the single-shot comparator resource fires, it is reset. This enables the single-shot comparator resource to fire multiple times.	
		0	When the single-shot comparator resource fires, it is not reset.
		1	When the single-shot comparator resource fires, it is reset. This enables the single-shot comparator resource to fire multiple times.

Table 48-774: A55_C0_TRCSSCCR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:16 (R/W)	ARC	ARC.. Selects one or more address range comparators for single-shot control.Each bit represents an address range comparator pair, so bit[n-16] controls the selection of address range comparator pair n-16. If bit[n-16] is: 0 The address range comparator pair n-16 is not selected for single-shot control. 1 The address range comparator pair n-16 is selected for single-shot control. The width of this field is IMPLEMENTATION DEFINED. The field contains a number of implemented bits equal to TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The address range comparator pair n-16 is not selected for single-shot control.
		1	The address range comparator pair n-16 is selected for single-shot control.
15:0 (R/W)	SAC	SAC.. Selects one or more single address comparators for single-shot control.Each bit represents a single address comparator, so bit[n] controls the selection of single address comparator n. If bit[n] is: 0 The single address comparator n, is not selected for single-shot control. 1 The single address comparator n, is selected for single-shot control. The width of this field is IMPLEMENTATION DEFINED. The field contains a number of implemented bits equal to 2 x TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The single address comparator n, is not selected for single-shot control.
		1	The single address comparator n, is selected for single-shot control.

Trace Single-Shot Comparator Status Registers.

Returns the status of the corresponding single-shot comparator.

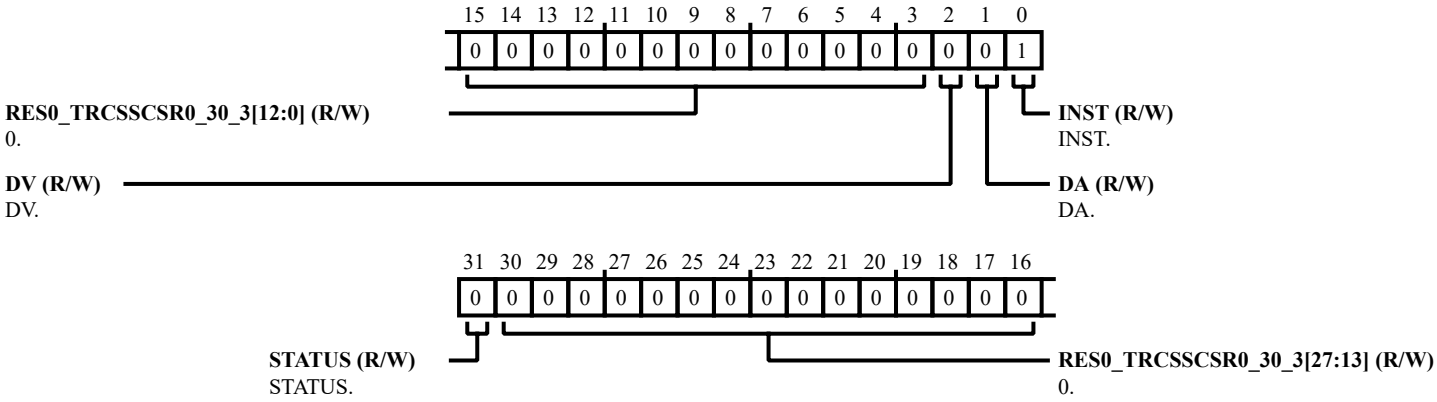

Figure 48-768: A55_C0_TRCSSCSR0 Register Diagram

Table 48-775: A55_C0_TRCSSCSR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	STATUS	STATUS.. Single-shot status bit. Indicates if any of the comparators that TRCSSCCRn.SAC or TRCSSCCRn.ARC selects have matched: 0 No match has occurred. 1 One or more matches has occurred. If TRCSSCCRn.RST==0 then there is only one match and no more matches are possible, and software must reset this bit to 0 to re-enable the single-shot control. STATUS must be written to set an initial state when configuring the trace unit, if the single-shot comparator is to be used.	
		0	No match has occurred.
		1	One or more matches has occurred. If TRCSSCCRn.RST==0 then there is only one match and no more matches are possible, and software must reset this bit to 0 to re-enable the single-shot control.
30:3 (R/W)	RES0_TRCSSCSR0_30_3	0.. Reserved, RES0.	

Table 48-775: A55_C0_TRCSSCSR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	DV	DV.. Data value comparator support bit. Indicates if the trace unit supports data address with data value comparisons: 0 Single-shot data address with data value comparisons are not supported. 1 Single-shot data address with data value comparisons are supported.	
		0	Single-shot data address with data value comparisons are not supported.
		1	Single-shot data address with data value comparisons are supported.
1 (R/W)	DA	DA.. Data address comparator support bit. Indicates if the trace unit supports data address comparisons: 0 Single-shot data address comparisons are not supported. 1 Single-shot data address comparisons are supported.	
		0	Single-shot data address comparisons are not supported.
		1	Single-shot data address comparisons are supported.
0 (R/W)	INST	INST.. Instruction address comparator support bit. Indicates if the trace unit supports instruction address comparisons: 0 Single-shot instruction address comparisons are not supported. 1 Single-shot instruction address comparisons are supported.	
		0	Single-shot instruction address comparisons are not supported.
		1	Single-shot instruction address comparisons are supported.

Trace Stall Control Register.

Trace Stall Control Register.

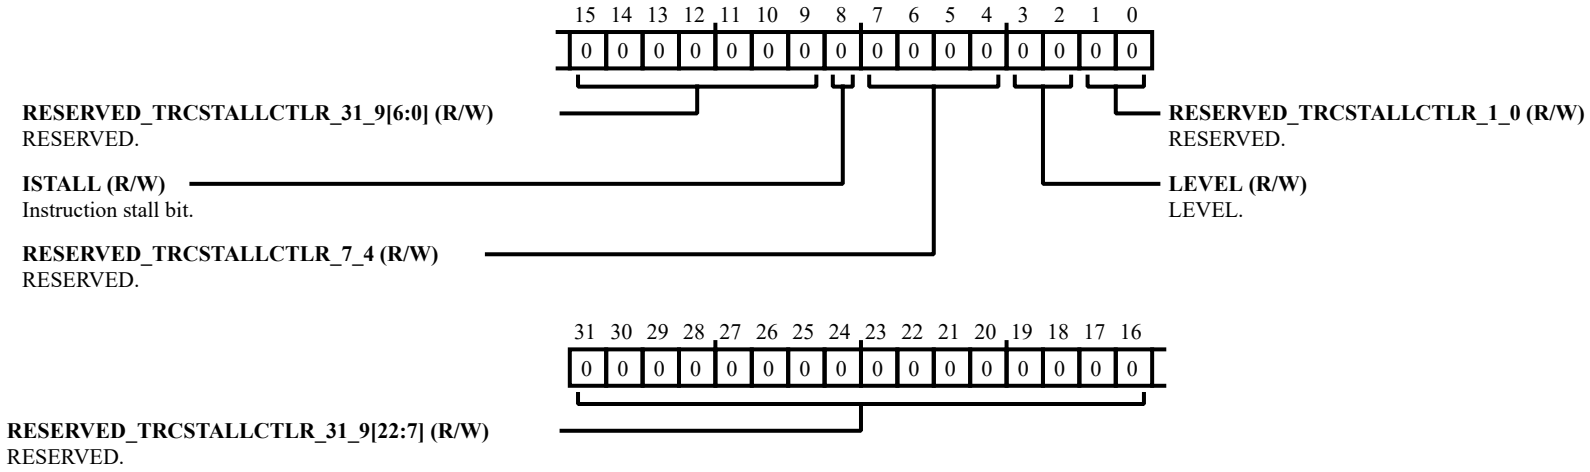

Figure 48-769: A55_C0_TRCSTALLCTLR Register Diagram

Table 48-776: A55_C0_TRCSTALLCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:9 (R/W)	RESERVED_TRCSTALLCTLR_31_9	RESERVED.. Reserved RES0.	
		0	Reserved.
8 (R/W)	ISTALL	Instruction stall bit.. Controls if the trace unit can stall the processor when the instruction trace buffer space is less than LEVEL.	
		0	The trace unit does not stall the processor.
		1	The trace unit can stall the processor.
7:4 (R/W)	RESERVED_TRCSTALLCTLR_7_4	RESERVED.. Reserved RES0.	
		0	Reserved.
3:2 (R/W)	LEVEL	LEVEL.. The field can support 4 monotonic levels from 0b00 to 0b11.	
		0	Minimum invasion. This setting has a greater risk of an ETM trace unit FIFO overflow.
		3	Maximum invasion occurs but there is less risk of a FIFO overflow.

Table 48-776: A55_C0_TRCSTALLCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	RESERVED_TRCSTALLCTLR_1_0	RESERVED.. Reserved RES0.	
		0	Reserved.

Trace Status Register.

Returns the trace unit status.

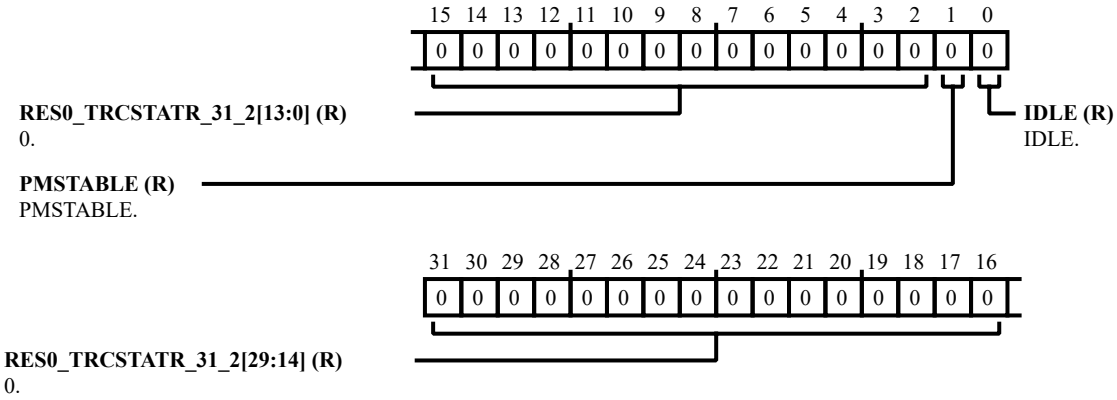

Figure 48-770: A55_C0_TRCSTATR Register Diagram

Table 48-777: A55_C0_TRCSTATR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:2 (R/NW)	RES0_TRCSTATR_31_2	0.. Reserved, RES0.	
1 (R/NW)	PMSTABLE	PMSTABLE.. Programmer's model stable bit: 0 The programmer's model is not stable. 1 The programmer's model is stable. When polled, the trace unit trace registers return stable data. The programmer's model is stable when all of the following are true:TRCPRGCTLR.EN==0 or the OS Lock is locked.Reads from trace unit registers return stable data.	
		0	The programmer's model is not stable.
		1	The programmer's model is stable. When polled, the trace unit trace registers return stable data.
0 (R/NW)	IDLE	IDLE.. Idle status bit: 0 The trace unit is not idle. 1 The trace unit is idle. The trace unit is idle when all of the following are true:TRCPRGCTLR.EN==0 or the OS Lock is locked.The trace unit is drained of any trace.With the exception of the programming interfaces, all external interfaces on the trace unit are quiescent.	
		0	The trace unit is not idle.
		1	The trace unit is idle.

Trace Synchronization Period Register.

Controls how often periodic trace synchronization requests occur.

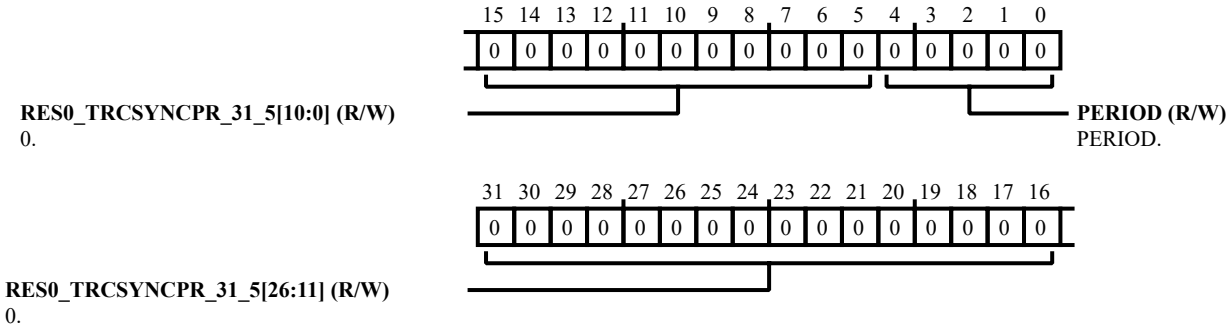

Figure 48-771: A55_C0_TRCSYNCPR Register Diagram

Table 48-778: A55_C0_TRCSYNCPR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:5 (R/W)	RES0_TRCSYNCPR_31_5	0.. Reserved, RES0.	
4:0 (R/W)	PERIOD	PERIOD.. Controls how many bytes of trace, the sum of instruction and data, that a trace unit can generate before a periodic trace synchronization request occurs. The number of bytes is always a power of two and the permitted values are: 00000 Periodic trace synchronization requests are disabled. This setting does not disable other types of trace synchronization request. 01000 Periodic trace synchronization request occurs after 2^8, or 256, bytes of trace. 01001 Periodic trace synchronization request occurs after 2^9, or 512, bytes of trace. 01010 Periodic trace synchronization request occurs after 2^10, or 1024, bytes of trace. and so on up to 0b10100, for which the request occurs after 2^20, or 1048576, bytes of trace.Values between 0b00001 and 0b001111 are reserved, as are values from 0b10101 onwards.	
		0	Periodic trace synchronization requests are disabled. This setting does not disable other types of trace synchronization request.
		8	Periodic trace synchronization request occurs after 2^8, or 256, bytes of trace.
		9	Periodic trace synchronization request occurs after 2^9, or 512, bytes of trace.
		10	Periodic trace synchronization request occurs after 2^10, or 1024, bytes of trace.

Trace Trace ID Register.

Sets the trace ID for instruction trace. If data trace is enabled then it also sets the trace ID for data trace, to (trace ID for instruction trace) + 1.

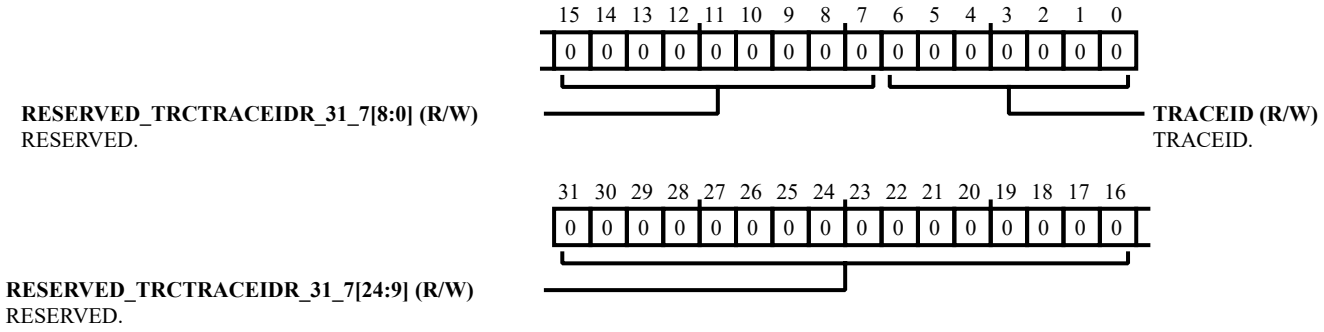

Figure 48-772: A55_C0_TRCTRACEIDR Register Diagram

Table 48-779: A55_C0_TRCTRACEIDR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:7 (R/W)	RESERVED_TRCTRA-CEIDR_31_7	RESERVED.. Reserved RES0.	
		0	Reserved.
6:0 (R/W)	TRACEID	TRACEID.. Trace ID value. When only instruction tracing is enabled this provides the trace ID.	

Trace Global Timestamp Control Register.

Controls the insertion of global timestamps in the trace streams.

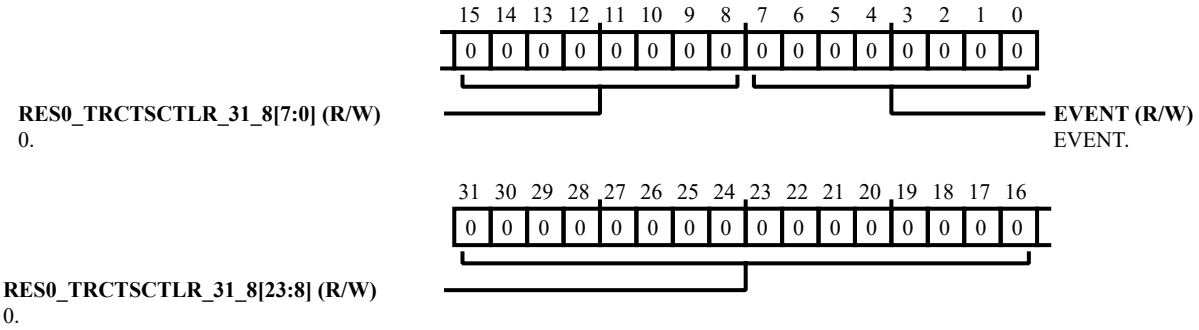

Figure 48-773: A55_C0_TRCTSCTLR Register Diagram

Table 48-780: A55_C0_TRCTSCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_TRCTSCTLR_31_8	0.. Reserved, RES0.
7:0 (R/W)	EVENT	EVENT.. An event selector. When the selected event is triggered, the trace unit inserts a global timestamp into the trace streams.

Trace ViewInst Main Control Register.

Controls instruction trace filtering.

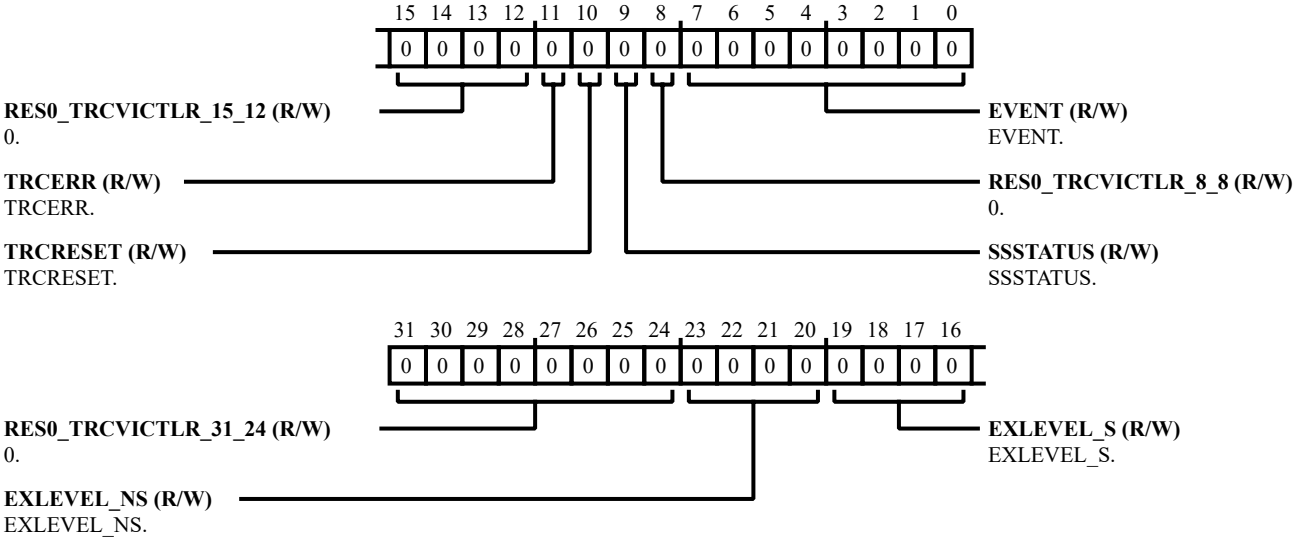

Figure 48-774: A55_C0_TRCVICTLR Register Diagram

Table 48-781: A55_C0_TRCVICTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/W)	RES0_TRCVICTLR_31_24	0.. Reserved, RES0.	
23:20 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether instruction tracing is enabled for the corresponding exception level: 0 The trace unit generates instruction trace, in Non-secure state, for exception level n. 1 The trace unit does not generate instruction trace, in Non-secure state, for exception level n. The exception levels are:Bit[20]Exception level 0.Bit[21]Exception level 1.Bit[22]Exception level 2.Bit[23]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. If instruction tracing is not implemented for a given exception level, the corresponding bit in this field is not implemented. Unimplemented bits are RAZ/WI.	
		0	The trace unit generates instruction trace, in Non-secure state, for exception level n.
		1	The trace unit does not generate instruction trace, in Non-secure state, for exception level n.

Table 48-781: A55_C0_TRCVICTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether instruction tracing is enabled for the corresponding exception level: 0 The trace unit generates instruction trace, in Secure state, for exception level n. 1 The trace unit does not generate instruction trace, in Secure state, for exception level n. The exception levels are:Bit[16]Exception level 0.Bit[17]Exception level 1.Bit[18]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[19]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. If instruction tracing is not implemented for a given exception level, the corresponding bit in this field is not implemented. Unimplemented bits are RAZ/WI.	
		0	The trace unit generates instruction trace, in Secure state, for exception level n.
		1	The trace unit does not generate instruction trace, in Secure state, for exception level n.
15:12 (R/W)	RES0_TRCVICTLR_15_12	0.. Reserved, RES0.	
11 (R/W)	TRCERR	TRCERR.. If TRCIDR3.TRCERR==1, this bit controls whether a trace unit must trace a system error exception: 0 The trace unit does not trace a system error exception unless it traces the exception or instruction immediately prior to the system error exception. 1 The trace unit always traces a system error exception. If TRCIDR3.TRCERR==0, this bit is RES0.	
		0	The trace unit does not trace a system error exception unless it traces the exception or instruction immediately prior to the system error exception.
		1	The trace unit always traces a system error exception.
10 (R/W)	TRCRESET	TRCRESET.. Controls whether a trace unit must trace a Reset exception: 0 The trace unit does not trace a Reset exception unless it traces the exception or instruction immediately prior to the Reset exception. 1 The trace unit always traces a Reset exception.	
		0	The trace unit does not trace a Reset exception unless it traces the exception or instruction immediately prior to the Reset exception.
		1	The trace unit always traces a Reset exception.

Table 48-781: A55_C0_TRCVICTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
9 (R/W)	SSSTATUS	SSSTATUS.. IF TRCIDR4.NUMACPAIRS>0 or TRCIDR.NUMPC>0, this bit returns the status of the start-stop logic: 0 The start-stop logic is in the stopped state. 1 The start-stop logic is in the started state. The bit only returns stable data when TRCSTATR.PMSTABLE==1.Before software enables the trace unit, TRCPRGCTLR.EN==1, it must write to this bit to set the initial state of the start-stop logic. If the start-stop logic is not used then set this bit to 1. ARM recommends that the value of this bit is set before each trace run begins.If TRCIDR4.NUMACPAIRS==0 and TRCIDR4.NUMPC==0, this bit is RES0, indicating that the start-stop logic is not implemented.	
		0	The start-stop logic is in the stopped state.
		1	The start-stop logic is in the started state.
8 (R/W)	RES0_TRCVICTLR_8_8	0.. Reserved, RES0.	
7:0 (R/W)	EVENT	EVENT.. An event selector. [TODO: Add the bit assignments for EVENT fields into the descriptions directly?].	

Trace ViewInst Include/Exclude Control Register.

Use this to set or read the address range comparators for the ViewInst include and exclude controls.

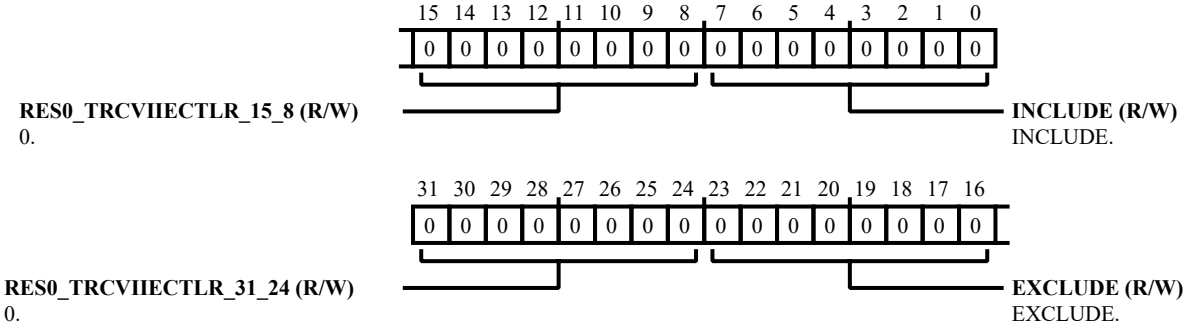

Figure 48-775: A55_C0_TRCVIIECTLR Register Diagram

Table 48-782: A55_C0_TRCVIIECTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/W)	RES0_TRCVIIECTLR_31_24	0.. Reserved, RES0.	
23:16 (R/W)	EXCLUDE	EXCLUDE.. 0 1 The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	
		1	
15:8 (R/W)	RES0_TRCVIIECTLR_15_8	0.. Reserved, RES0.	

Table 48-782: A55_C0_TRCVIIECTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:0 (R/W)	INCLUDE	INCLUDE.. Include range field. Selects which address range comparator pairs are in use with ViewInst include control. Each bit represents an address range comparator pair, so bit[m] controls the selection of address range comparator pair m. If bit[m] is: 0 The address range that address range comparator pair m defines is not selected for ViewInst include control. 1 The address range that address range comparator pair m defines is selected for ViewInst include control. The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.Selecting no include comparators indicates that all instructions are included by default. The exclude control then indicates which ranges are excluded.	
		0	The address range that address range comparator pair m defines is not selected for ViewInst include control.
		1	The address range that address range comparator pair m defines is selected for ViewInst include control.

Trace ViewInst Start/Stop Control Register.

Use this to set, or read, the single address comparators that control the ViewInst start-stop logic. The start-stop logic is active for an instruction which causes a start and remains active up to and including an instruction which causes a stop, and then the start-stop logic becomes inactive.

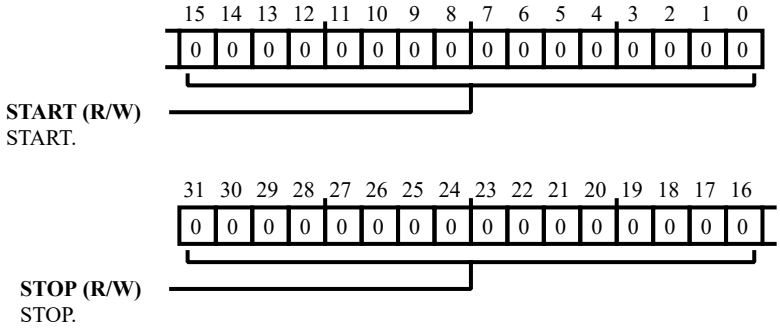

Figure 48-776: A55_C0_TRCVISSCTLR Register Diagram

Table 48-783: A55_C0_TRCVISSCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:16 (R/W)	STOP	STOP.. Selects which single address comparators are in use with ViewInst start-stop control, for the purpose of stopping trace. Each bit represents a single address comparator, so bit[m] controls the selection of single address comparator m-16. If bit[m] is: 0 The single address comparator m-16 is not selected as a stop resource. 1 The single address comparator m-16 is selected as a stop resource. The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of 2 x TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The single address comparator m-16 is not selected as a stop resource.
		1	The single address comparator m-16 is selected as a stop resource.

Table 48-783: A55_C0_TRCVISSCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:0 (R/W)	START	START.. Selects which single address comparators are in use with ViewInst start-stop control, for the purpose of starting trace. Each bit represents a single address comparator, so bit[n] controls the selection of single address comparator n. If bit[n] is: 0 The single address comparator n is not selected as a start resource. 1 The single address comparator n is selected as a start resource. The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of 2 x TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The single address comparator n is not selected as a start resource.
		1	The single address comparator n is selected as a start resource.

Trace VMID Comparator Value Registers.

Contains a VMID value.

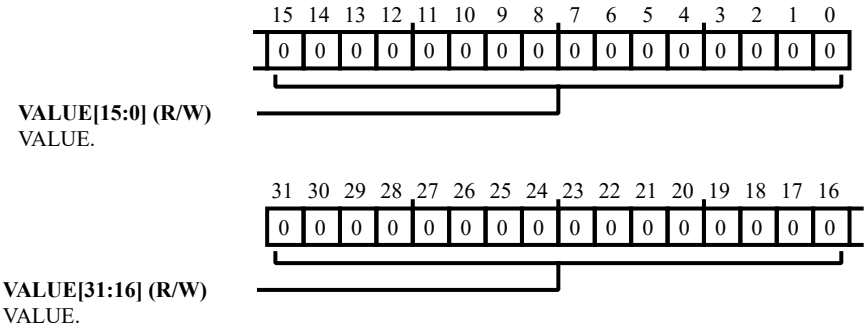

Figure 48-777: A55_C0_TRCVMIDCVR0_31_0 Register Diagram

Table 48-784: A55_C0_TRCVMIDCVR0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. VMID value. The implemented width of this field is IMPLEMENTATION DEFINED, and is set by TRCIDR2.VMIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the VMID is zero until the processor updates the VMID.

Trace VMID Comparator Value Registers.

Contains a VMID value.

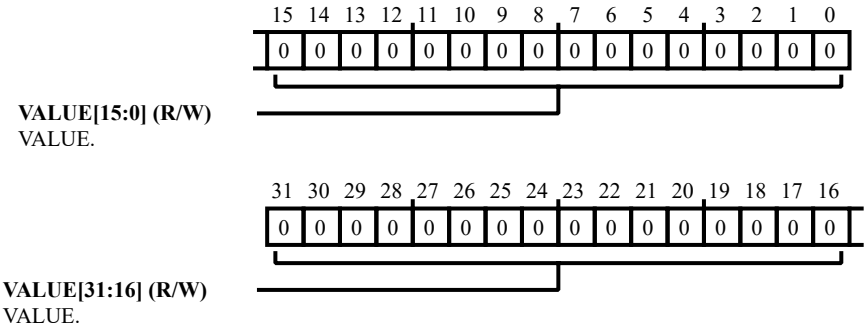

Figure 48-778: A55_C0_TRCVMIDCVR0_63_32 Register Diagram

Table 48-785: A55_C0_TRCVMIDCVR0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. VMID value. The implemented width of this field is IMPLEMENTATION DEFINED, and is set by TRCIDR2.VMIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the VMID is zero until the processor updates the VMID.

Performance Monitors Cycle Counter Filter Register.

Determines the modes in which the Cycle Counter, PMCCNTR_EL0, increments.

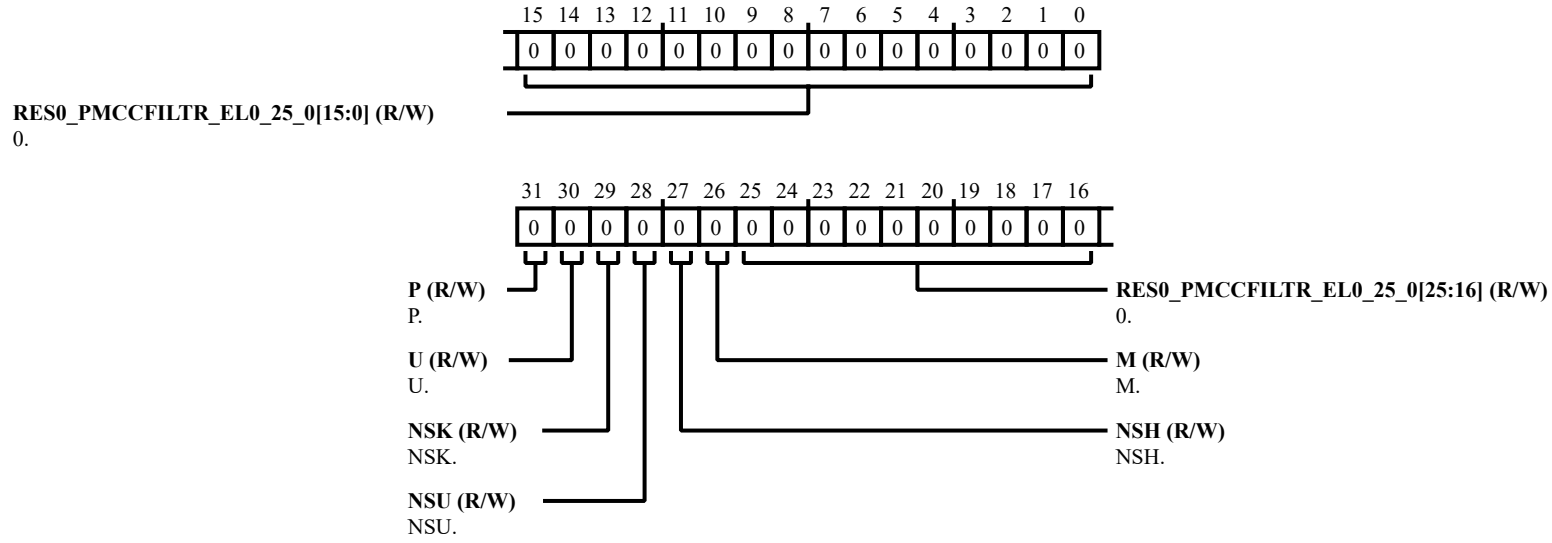

Figure 48-779: A55_C0_PMCCFILTR_EL0 Register Diagram

Table 48-786: A55_C0_PMCCFILTR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	P	P.. Privileged modes filtering bit. Controls counting in EL1. If EL3 is implemented, then counting in Non-secure EL1 is further controlled by the NSK bit. The possible values of this bit are: 0 Count cycles in EL1. 1 Do not count cycles in EL1.	
		0	Count cycles in EL1.
		1	Do not count cycles in EL1.
30 (R/W)	U	U.. User filtering bit. Controls counting in EL0. If EL3 is implemented, then counting in Non-secure EL0 is further controlled by the NSU bit. The possible values of this bit are: 0 Count cycles in EL0. 1 Do not count cycles in EL0.	
		0	Count cycles in EL0.
		1	Do not count cycles in EL0.
29 (R/W)	NSK	NSK.. Non-secure EL1 (kernel) modes filtering bit. Controls counting in Non-secure EL1. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Non-secure EL1 are counted. Otherwise, cycles in Non-secure EL1 are not counted.	

Table 48-786: A55_C0_PMCCFILTR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	NSU	NSU.. Non-secure EL0 (Unprivileged) filtering. Controls counting in Non-secure EL0. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of U, cycles in Non-secure EL0 are counted. Otherwise, cycles in Non-secure EL0 are not counted.	
27 (R/W)	NSH	NSH.. Non-secure EL2 (Hypervisor) filtering bit. Controls counting in Non-secure EL2. If EL2 is not implemented, this bit is RES0. 0 Do not count cycles in EL2. 1 Count cycles in EL2.	
		0	Do not count cycles in EL2.
		1	Count cycles in EL2.
26 (R/W)	M	M.. Secure EL3 filtering bit. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Otherwise, cycles in Secure EL3 are not counted. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Most applications can ignore this field and set its value to 0. This field is not visible in the AArch32 PMCCFILTR System register.	
25:0 (R/W)	RES0_PMCCFILTR_EL0_25_0	0.. Reserved, RES0.	

Performance Monitors Cycle Counter.

Holds the value of the processor Cycle Counter, CCNT, that counts processor clock cycles. See for more information.

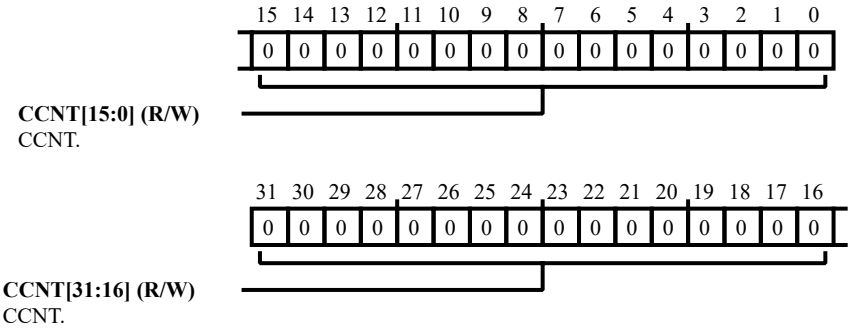

Figure 48-780: A55_C0_PMCCNTR_EL0_31_0 Register Diagram

Table 48-787: A55_C0_PMCCNTR_EL0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	CCNT	CCNT.. Cycle count. Depending on the values of PMCR_EL0.{LC,D}, the cycle count increments in one of the following ways: Every processor clock cycle. Every 64th processor clock cycle. Writing 1 to PMCR_EL0.C sets this field to 0.

Performance Monitors Cycle Counter.

Holds the value of the processor Cycle Counter, CCNT, that counts processor clock cycles. See for more information.

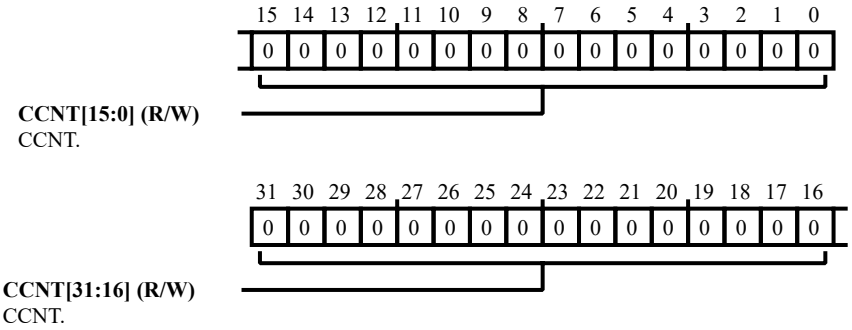

Figure 48-781: A55_C0_PMCCNTR_EL0_63_32 Register Diagram

Table 48-788: A55_C0_PMCCNTR_EL0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	CCNT	CCNT.. Cycle count. Depending on the values of PMCR_EL0.{LC,D}, the cycle count increments in one of the following ways: Every processor clock cycle. Every 64th processor clock cycle. Writing 1 to PMCR_EL0.C sets this field to 0.

Performance Monitors Common Event Identification register 0.

Defines which common architectural and common microarchitectural feature events in the range 0x000 to 0x01F are implemented. If a particular bit is set to 1, then the event for that bit is implemented. This view of the register has previously been called PMCEID0_EL0.

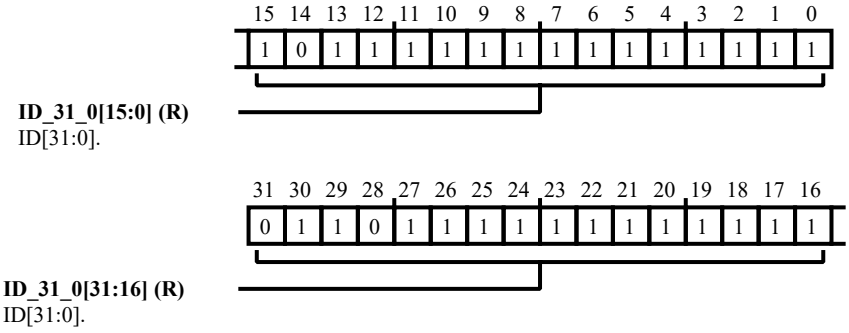

Figure 48-782: A55_C0_PMCEID0 Register Diagram

Table 48-789: A55_C0_PMCEID0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_31_0	ID[31:0].. PMCEID0[n] maps to event n. For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Common Event Identification register 1.

Defines which common architectural and common microarchitectural feature events in the range 0x020 to 0x03F are implemented. If a particular bit is set to 1, then the event for that bit is implemented. This view of the register has previously been called PMCEID1_EL0.

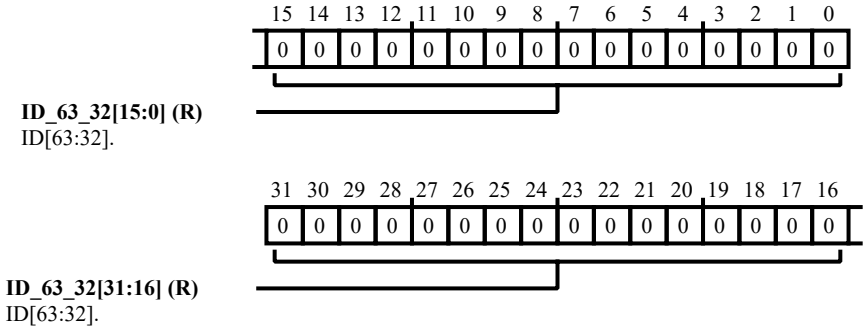

Figure 48-783: A55_C0_PMCEID1 Register Diagram

Table 48-790: A55_C0_PMCEID1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_63_32	ID[63:32].. PMCEID1[n] maps to event (n + 32). For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Common Event Identification register 2.

Defines which common architectural and common microarchitectural feature events in the range 0x4000 to 0x401F are implemented. If a particular bit is set to 1, then the event for that bit is implemented.

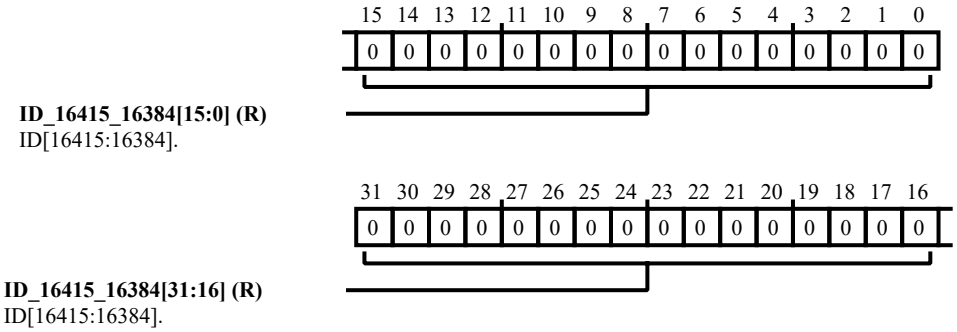

Figure 48-784: A55_C0_PMCEID2 Register Diagram

Table 48-791: A55_C0_PMCEID2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_16415_16384	ID[16415:16384].. PMCEID2[31:0] maps to common events 0x4000 to 0x401F. For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Common Event Identification register 3.

Defines which common architectural and common microarchitectural feature events in the range 0x4020 to 0x403F are implemented. If a particular bit is set to 1, then the event for that bit is implemented.

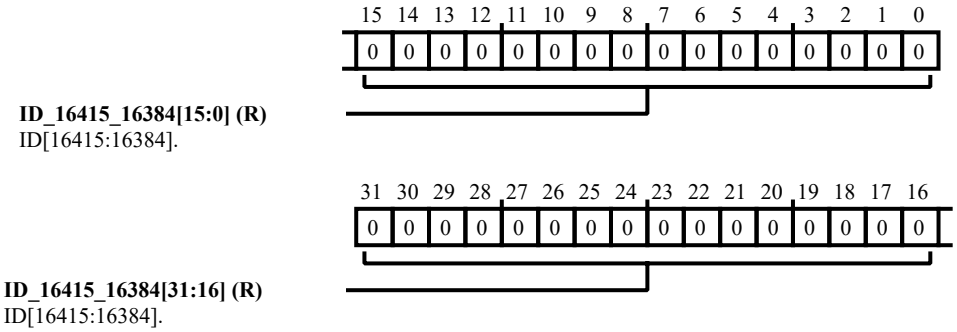

Figure 48-785: A55_C0_PMCEID3 Register Diagram

Table 48-792: A55_C0_PMCEID3 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_16415_16384	ID[16415:16384].. PMCEID2[31:0] maps to common events 0x4000 to 0x401F. For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Configuration Register.

Contains PMU-specific configuration data.

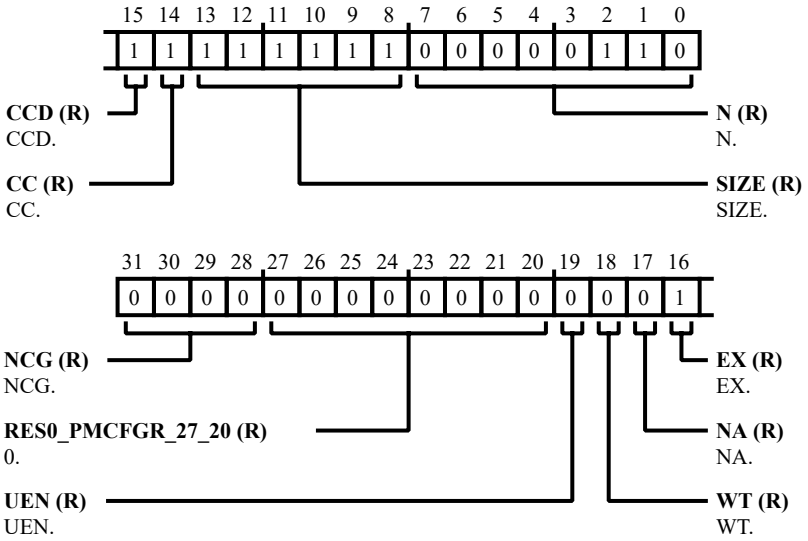

Figure 48-786: A55_C0_PMCFGR Register Diagram

Table 48-793: A55_C0_PMCFGR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:28 (R/NW)	NCG	NCG.. This feature is not supported, so this field is RAZ.	
27:20 (R/NW)	RES0_PMCFGR_27_20	0.. Reserved, RES0.	
19 (R/NW)	UEN	UEN.. User-mode Enable Register supported. PMUSERENR_EL0 is not visible in the external debug interface, so this bit is RAZ.	
18 (R/NW)	WT	WT.. This feature is not supported, so this bit is RAZ.	
17 (R/NW)	NA	NA.. This feature is not supported, so this bit is RAZ.	
16 (R/NW)	EX	EX.. Export supported. Value is IMPLEMENTATION DEFINED. 0 PMCR_EL0.X is RES0. 1 PMCR_EL0.X is read/write.	
		0	PMCR_EL0.X is RES0.
		1	PMCR_EL0.X is read/write.

Table 48-793: A55_C0_PMCFGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15 (R/NW)	CCD	CCD.. Cycle counter has prescale. This is RES1 if AArch32 is supported at any EL, and RAZ otherwise. 0 PMCR_EL0.D is RES0. 1 PMCR_EL0.D is read/write.	
		0	PMCR_EL0.D is RES0.
		1	PMCR_EL0.D is read/write.
14 (R/NW)	CC	CC.. Dedicated cycle counter (counter 31) supported. This bit is RAO.	
13:8 (R/NW)	SIZE	SIZE.. Size of counters. This field determines the spacing of counters in the memory-map. In ARMv8 the counters are at doubleword-aligned addresses, and the largest counter is 64-bits, so this field is 0b111111.	
7:0 (R/NW)	N	N.. Number of counters implemented in addition to the cycle counter, PMCCNTR_EL0. The maximum number of event counters is 31. 00000000 Only PMCCNTR_EL0 implemented. 00000001 PMCCNTR_EL0 plus one event counter implemented. and so on up to 0b00011111, which indicates PMCCNTR_EL0 and 31 event counters implemented.	
		0	Only PMCCNTR_EL0 implemented.
		1	PMCCNTR_EL0 plus one event counter implemented.

Performance Monitors Count Enable Clear register.

Disables the Cycle Count Register, PMCCNTR_EL0, and any implemented event counters PMEVCNTR0. Reading this register shows which counters are enabled.

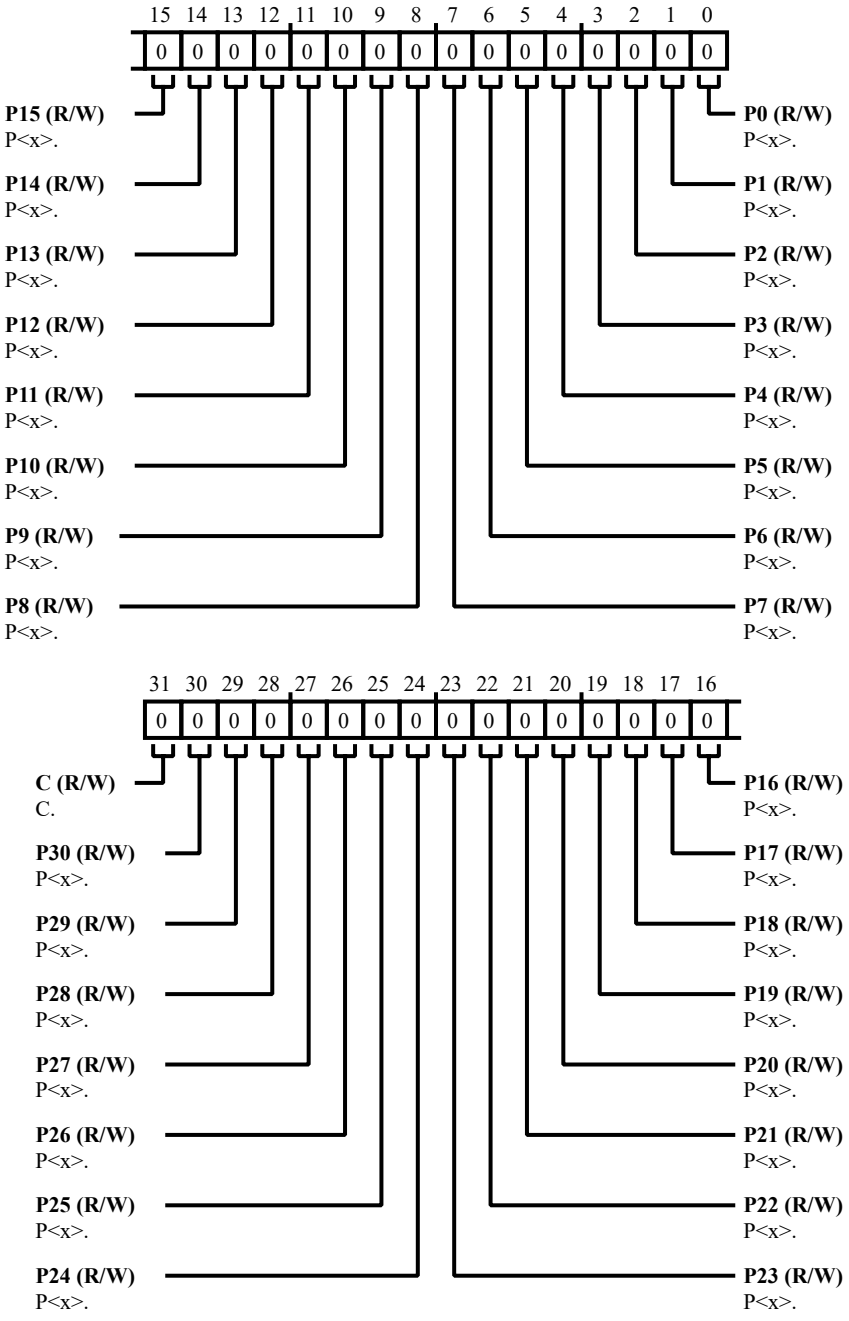

Figure 48-787: A55_C0_PMCNTENCLR_EL0 Register Diagram

Table 48-794: A55_C0_PMCNTENCLR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 disable bit. Disables the cycle counter register. Possible values are: 0 When read, means the cycle counter is disabled. When written, has no effect. 1 When read, means the cycle counter is enabled. When written, disables the cycle counter.	
		0	When read, means the cycle counter is disabled. When written, has no effect.
		1	When read, means the cycle counter is enabled. When written, disables the cycle counter.
30 (R/W)	P30	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
29 (R/W)	P29	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
28 (R/W)	P28	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-794: A55_C0_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
27 (R/W)	P27	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
26 (R/W)	P26	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
25 (R/W)	P25	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
24 (R/W)	P24	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-794: A55_C0_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23 (R/W)	P23	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
22 (R/W)	P22	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
21 (R/W)	P21	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
20 (R/W)	P20	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-794: A55_C0_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19 (R/W)	P19	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
18 (R/W)	P18	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
17 (R/W)	P17	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
16 (R/W)	P16	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-794: A55_C0_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15 (R/W)	P15	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
14 (R/W)	P14	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
13 (R/W)	P13	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
12 (R/W)	P12	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Performance Monitors Count Enable Set register.

Enables the Cycle Count Register, PMCCNTR_EL0, and any implemented event counters PMEVCNTR0. Reading this register shows which counters are enabled.

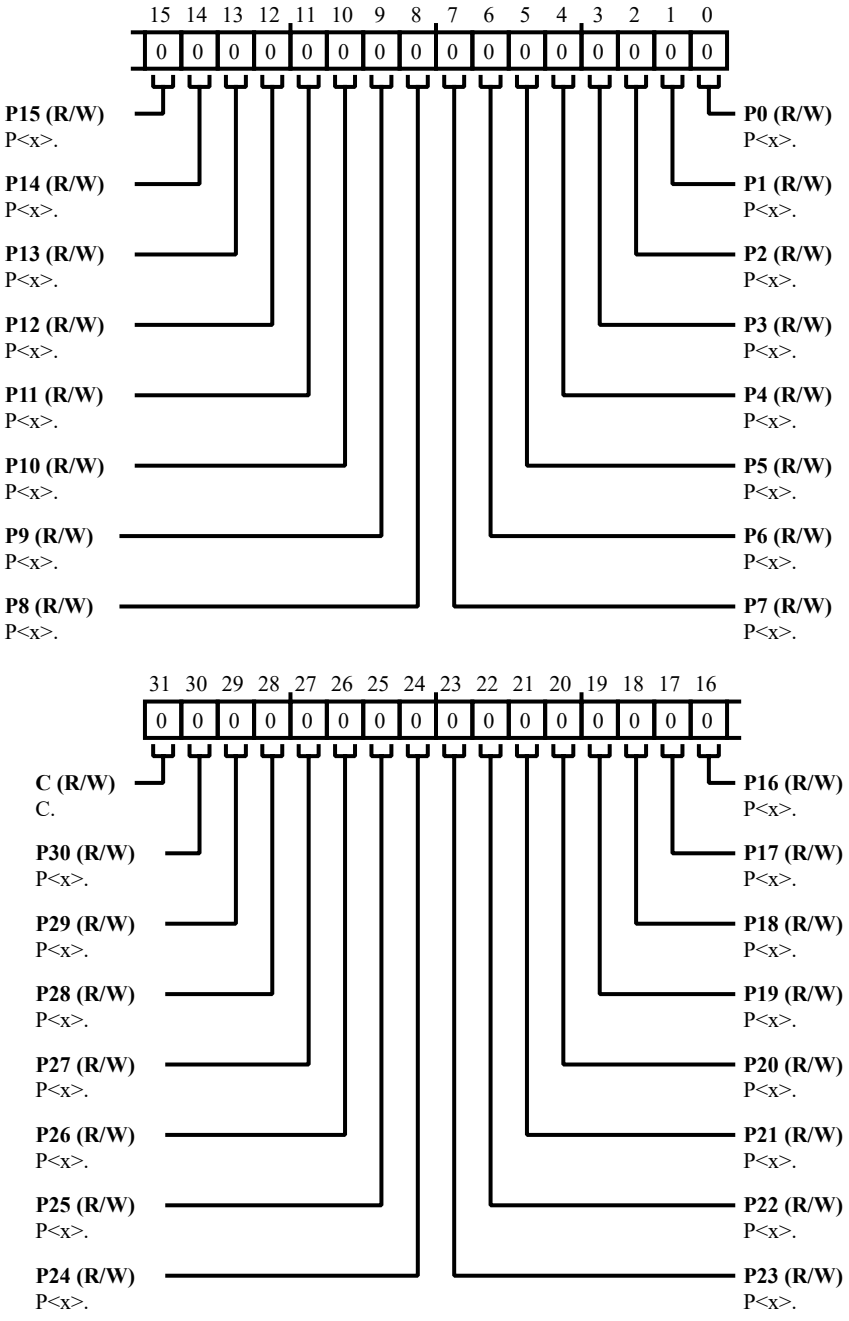

Figure 48-788: A55_C0_PMCNTENSET_EL0 Register Diagram

Table 48-795: A55_C0_PMCNTENSET_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 enable bit. Enables the cycle counter register. Possible values are: 0 When read, means the cycle counter is disabled. When written, has no effect. 1 When read, means the cycle counter is enabled. When written, enables the cycle counter.	
		0	When read, means the cycle counter is disabled. When written, has no effect.
		1	When read, means the cycle counter is enabled. When written, enables the cycle counter.
30 (R/W)	P30	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
29 (R/W)	P29	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
28 (R/W)	P28	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.

Table 48-795: A55_C0_PMCNTENSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7 (R/W)	P7	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
6 (R/W)	P6	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
5 (R/W)	P5	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
4 (R/W)	P4	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.

Table 48-795: A55_C0_PMCNTENSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3 (R/W)	P3	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
2 (R/W)	P2	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
1 (R/W)	P1	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
0 (R/W)	P0	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.

Performance Monitors Control Register.

Provides details of the Performance Monitors implementation, including the number of counters implemented, and configures and controls the counters.

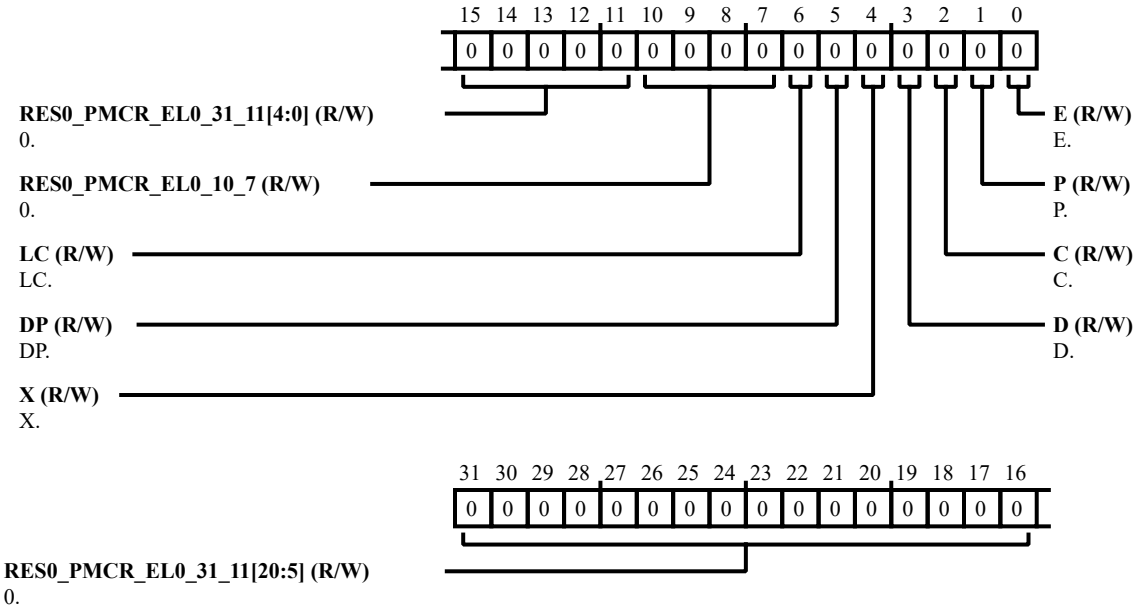

Figure 48-789: A55_C0_PMCR_EL0 Register Diagram

Table 48-796: A55_C0_PMCR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:11 (R/W)	RES0_PMCR_EL0_31_11	0.. Reserved, RAZ/WI.	
10:7 (R/W)	RES0_PMCR_EL0_10_7	0.. Reserved, RES0.	
6 (R/W)	LC	LC.. Long cycle counter enable. Determines which PMCCNTR_EL0 bit generates an overflow recorded by PMOVSR[31]. 0 Cycle counter overflow on increment that changes PMCCNTR_EL0[31] from 1 to 0. 1 Cycle counter overflow on increment that changes PMCCNTR_EL0[63] from 1 to 0. ARM deprecates use of PMCR_EL0.LC = 0. In an AArch64-only implementation, this field is RES1.	
		0	Cycle counter overflow on increment that changes PMCCNTR_EL0[31] from 1 to 0.
		1	Cycle counter overflow on increment that changes PMCCNTR_EL0[63] from 1 to 0.

Table 48-796: A55_C0_PMCR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
5 (R/W)	DP	DP.. Disable cycle counter when event counting is prohibited. The possible values of this bit are: 0 PMCCNTR_EL0, if enabled, counts when event counting is prohibited. 1 PMCCNTR_EL0 does not count when event counting is prohibited. Event counting is prohibited when ProfilingProhibited(IsSecure(),PSTATE.EL) == TRUE. When EL3 is not implemented, this field is RES0: In ARMv8.0. In ARMv8.1, only if EL2 is not implemented. Otherwise this field is RW.	
		0	PMCCNTR_EL0, if enabled, counts when event counting is prohibited.
		1	PMCCNTR_EL0 does not count when event counting is prohibited.
4 (R/W)	X	X.. Enable export of events in an IMPLEMENTATION DEFINED event stream. The possible values of this bit are: 0 Do not export events. 1 Export events where not prohibited. This field enables the exporting of events over an event bus to another device, for example to an OPTIONAL trace macrocell. If the implementation does not include such an event bus then this field is RAZ/WI, otherwise it is an RW field. In an implementation that includes an event bus, no events are exported when counting is prohibited. This field does not affect the generation of Performance Monitors overflow interrupt requests or signaling to a cross-trigger interface (CTI) that can be implemented as signals exported from the PE.	
		0	Do not export events.
		1	Export events where not prohibited.
3 (R/W)	D	D.. Clock divider. The possible values of this bit are: 0 When enabled, PMCCNTR_EL0 counts every clock cycle. 1 When enabled, PMCCNTR_EL0 counts once every 64 clock cycles. In an AArch64-only implementation this field is RES0, otherwise it is an RW field.If PMCR_EL0.LC == 1, this bit is ignored and the cycle counter counts every clock cycle.	
		0	When enabled, PMCCNTR_EL0 counts every clock cycle.
		1	When enabled, PMCCNTR_EL0 counts once every 64 clock cycles.

Table 48-796: A55_C0_PMCR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	C	C.. Cycle counter reset. This bit is WO. The effects of writing to this bit are: 0 No action. 1 Reset PMCCNTR_EL0 to zero. This bit is always RAZ. Resetting PMCCNTR_EL0 does not clear the PMCCNTR_EL0 overflow bit to 0.	
		0	No action.
		1	Reset PMCCNTR_EL0 to zero.
1 (R/W)	P	P.. Event counter reset. This bit is WO. The effects of writing to this bit are: 0 No action. 1 Reset all event counters, not including PMCCNTR_EL0, to zero. This bit is always RAZ. Resetting the event counters does not clear any overflow bits to 0.	
		0	No action.
		1	Reset all event counters, not including PMCCNTR_EL0, to zero.
0 (R/W)	E	E.. Enable. The possible values of this bit are: 0 All counters, including PMCCNTR_EL0, are disabled. 1 All counters are enabled by PMCNTENSET_EL0. This bit is RW.	
		0	All counters, including PMCCNTR_EL0, are disabled.
		1	All counters are enabled by PMCNTENSET_EL0.

Performance Monitors Event Count Registers.

Holds event counter n, which counts events, where n is 0 to 30.

Table 48-802: A55_C0_PMEVCNTR5_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	EVENT_COUNTER_N	Event counter n.. Event counter n. Value of event counter n, where n is the number of this register and is a number from 0 to 30.

Performance Monitors Event Type Registers.

Configures event counter n, where n is 0 to 30.

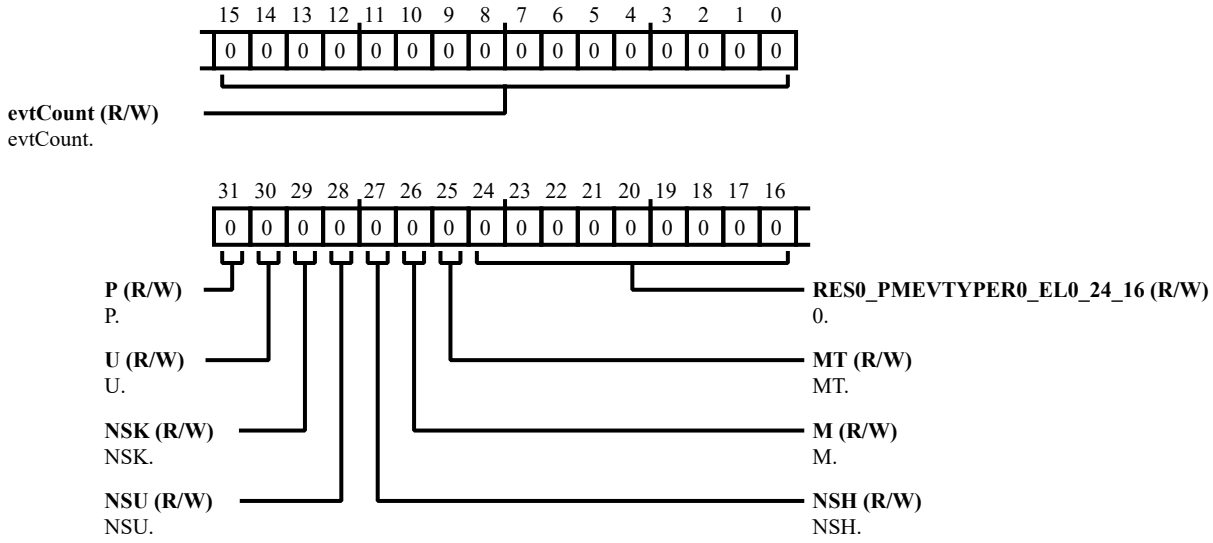

Figure 48-796: A55_C0_PMEVTYPER0_EL0 Register Diagram

Table 48-803: A55_C0_PMEVTYPER0_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	P	P.. Privileged filtering bit. Controls counting in EL1. If EL3 is implemented, then counting in Non-secure EL1 is further controlled by the NSK bit. The possible values of this bit are: 0 Count events in EL1. 1 Do not count events in EL1.	
		0	Count events in EL1.
		1	Do not count events in EL1.
30 (R/W)	U	U.. User filtering bit. Controls counting in EL0. If EL3 is implemented, then counting in Non-secure EL0 is further controlled by the NSU bit. The possible values of this bit are: 0 Count events in EL0. 1 Do not count events in EL0.	
		0	Count events in EL0.
		1	Do not count events in EL0.
29 (R/W)	NSK	NSK.. Non-secure EL1 (kernel) modes filtering bit. Controls counting in Non-secure EL1. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, events in Non-secure EL1 are counted. Otherwise, events in Non-secure EL1 are not counted.	

Table 48-803: A55_C0_PMEVTYPER0_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	NSU	NSU.. Non-secure EL0 (Unprivileged) filtering. Controls counting in Non-secure EL0. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of U, events in Non-secure EL0 are counted. Otherwise, events in Non-secure EL0 are not counted.	
27 (R/W)	NSH	NSH.. Non-secure EL2 (Hypervisor) filtering. Controls counting in Non-secure EL2. If EL2 is not implemented, this bit is RES0. 0 Do not count events in EL2. 1 Count events in EL2.	
		0	Do not count events in EL2.
		1	Count events in EL2.
26 (R/W)	M	M.. Secure EL3 filtering bit. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Otherwise, cycles in Secure EL3 are not counted. Most applications can ignore this field and set its value to 0. This field is not visible in the AArch32 PMEVTYPER System register.	
25 (R/W)	MT	MT.. Multithreading. When the implementation is multi-threaded, the valid values for this bit are: 0 Count events only on controlling PE. 1 Count events from any PE with the same affinity at level 1 and above as this PE. When the implementation is not multi-threaded, this bit is RES0. An implementation is described as multi-threaded when the lowest level of affinity consists of logical PEs that are implemented using a multi-threading type approach. That is, the performance of PEs at the lowest affinity level is highly interdependent. On such an implementation, the value of MPIDR_EL1.MT, when read at the highest implemented Exception level, is 1. Events from a different thread of a multithreaded implementation are not Attributable to the thread counting the event.	
		0	Count events only on controlling PE.
		1	Count events from any PE with the same affinity at level 1 and above as this PE.
24:16 (R/W)	RES0_PMEVTYP-ER0_EL0_24_16	0.. Reserved, RES0.	

Table 48-803: A55_C0_PMEVTYPER0_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
15:0 (R/W)	EVTCOUNT	evtCount.. Event to count. The event number of the event that is counted by event counter PMEVCNTR<n>_EL0. Software must program this field with an event that is supported by the PE being programmed. There are three ranges of event numbers: Event numbers in the range 0x0000 to 0x003F are common architectural and microarchitectural events. Event numbers in the range 0x0040 to 0x00BF are ARM recommended common architectural and microarchitectural events. Event numbers in the range 0x0C0 to 0x3FF are IMPLEMENTATION DEFINED events. If evtCount is programmed to an event that is reserved or not supported by the PE, the behavior depends on the event type: For the range 0x000 to 0x03F, no events are counted, and the value returned by a read of the evtCount field is the value written to the field. For IMPLEMENTATION DEFINED events, it is UNPREDICTABLE what event, if any, is counted, and the value returned by a read of the evtCount field is UNKNOWN. UNPREDICTABLE in this case means the event must not expose privileged information. UNPREDICTABLE means the event must not expose privileged information. For IMPLEMENTATION DEFINED events: It is UNPREDICTABLE what event, if any, is counted. UNPREDICTABLE in this case means the event must not expose privileged information. The value read back from evtCount is UNKNOWN. ARM recommends that the behavior across a family of implementations is defined such that if a given implementation does not include an event from a set of common IMPLEMENTATION DEFINED events, then no event is counted and the value read back on evtCount is the value written.

Performance Monitors Event Type Registers.

Configures event counter n, where n is 0 to 30.

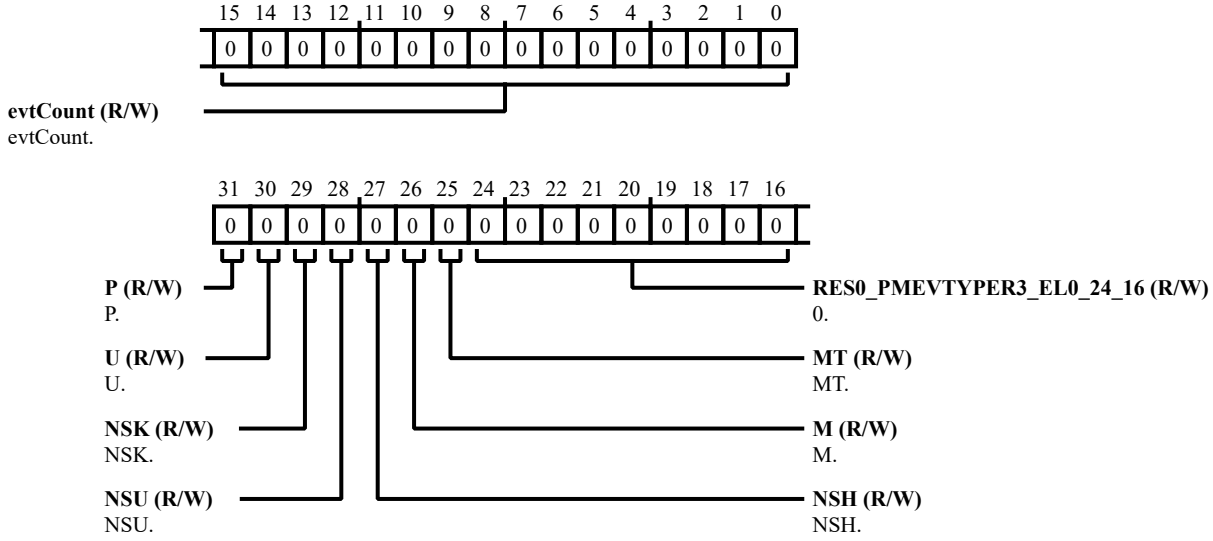

Figure 48-799: A55_C0_PMEVTYPER3_EL0 Register Diagram

Table 48-806: A55_C0_PMEVTYPER3_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	P	P.. Privileged filtering bit. Controls counting in EL1. If EL3 is implemented, then counting in Non-secure EL1 is further controlled by the NSK bit. The possible values of this bit are: 0 Count events in EL1. 1 Do not count events in EL1.	
		0	Count events in EL1.
		1	Do not count events in EL1.
30 (R/W)	U	U.. User filtering bit. Controls counting in EL0. If EL3 is implemented, then counting in Non-secure EL0 is further controlled by the NSU bit. The possible values of this bit are: 0 Count events in EL0. 1 Do not count events in EL0.	
		0	Count events in EL0.
		1	Do not count events in EL0.
29 (R/W)	NSK	NSK.. Non-secure EL1 (kernel) modes filtering bit. Controls counting in Non-secure EL1. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, events in Non-secure EL1 are counted. Otherwise, events in Non-secure EL1 are not counted.	

Table 48-806: A55_C0_PMEVTYPER3_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	NSU	NSU.. Non-secure EL0 (Unprivileged) filtering. Controls counting in Non-secure EL0. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of U, events in Non-secure EL0 are counted. Otherwise, events in Non-secure EL0 are not counted.	
27 (R/W)	NSH	NSH.. Non-secure EL2 (Hypervisor) filtering. Controls counting in Non-secure EL2. If EL2 is not implemented, this bit is RES0. 0 Do not count events in EL2. 1 Count events in EL2.	
		0	Do not count events in EL2.
		1	Count events in EL2.
26 (R/W)	M	M.. Secure EL3 filtering bit. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Otherwise, cycles in Secure EL3 are not counted. Most applications can ignore this field and set its value to 0. This field is not visible in the AArch32 PMEVTYPER System register.	
25 (R/W)	MT	MT.. Multithreading. When the implementation is multi-threaded, the valid values for this bit are: 0 Count events only on controlling PE. 1 Count events from any PE with the same affinity at level 1 and above as this PE. When the implementation is not multi-threaded, this bit is RES0. An implementation is described as multi-threaded when the lowest level of affinity consists of logical PEs that are implemented using a multi-threading type approach. That is, the performance of PEs at the lowest affinity level is highly interdependent. On such an implementation, the value of MPIDR_EL1.MT, when read at the highest implemented Exception level, is 1. Events from a different thread of a multithreaded implementation are not Attributable to the thread counting the event.	
		0	Count events only on controlling PE.
		1	Count events from any PE with the same affinity at level 1 and above as this PE.
24:16 (R/W)	RES0_PMEVTYP-ER3_EL0_24_16	0.. Reserved, RES0.	

Table 48-806: A55_C0_PMEVTYPER3_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
15:0 (R/W)	EVTCOUNT	evtCount.. Event to count. The event number of the event that is counted by event counter PMEVCNTR<n>_EL0. Software must program this field with an event that is supported by the PE being programmed. There are three ranges of event numbers: Event numbers in the range 0x0000 to 0x003F are common architectural and microarchitectural events. Event numbers in the range 0x0040 to 0x00BF are ARM recommended common architectural and microarchitectural events. Event numbers in the range 0x0C0 to 0x3FF are IMPLEMENTATION DEFINED events. If evtCount is programmed to an event that is reserved or not supported by the PE, the behavior depends on the event type: For the range 0x000 to 0x03F, no events are counted, and the value returned by a read of the evtCount field is the value written to the field. For IMPLEMENTATION DEFINED events, it is UNPREDICTABLE what event, if any, is counted, and the value returned by a read of the evtCount field is UNKNOWN. UNPREDICTABLE in this case means the event must not expose privileged information. UNPREDICTABLE means the event must not expose privileged information. For IMPLEMENTATION DEFINED events: It is UNPREDICTABLE what event, if any, is counted. UNPREDICTABLE in this case means the event must not expose privileged information. The value read back from evtCount is UNKNOWN. ARM recommends that the behavior across a family of implementations is defined such that if a given implementation does not include an event from a set of common IMPLEMENTATION DEFINED events, then no event is counted and the value read back on evtCount is the value written.

Performance Monitors Event Type Registers.

Configures event counter n, where n is 0 to 30.

Performance Monitors Interrupt Enable Clear register.

Disables the generation of interrupt requests on overflows from the Cycle Count Register, PMCCNTR_EL0, and the event counters PMEVCNTR0_EL0. Reading the register shows which overflow interrupt requests are enabled.

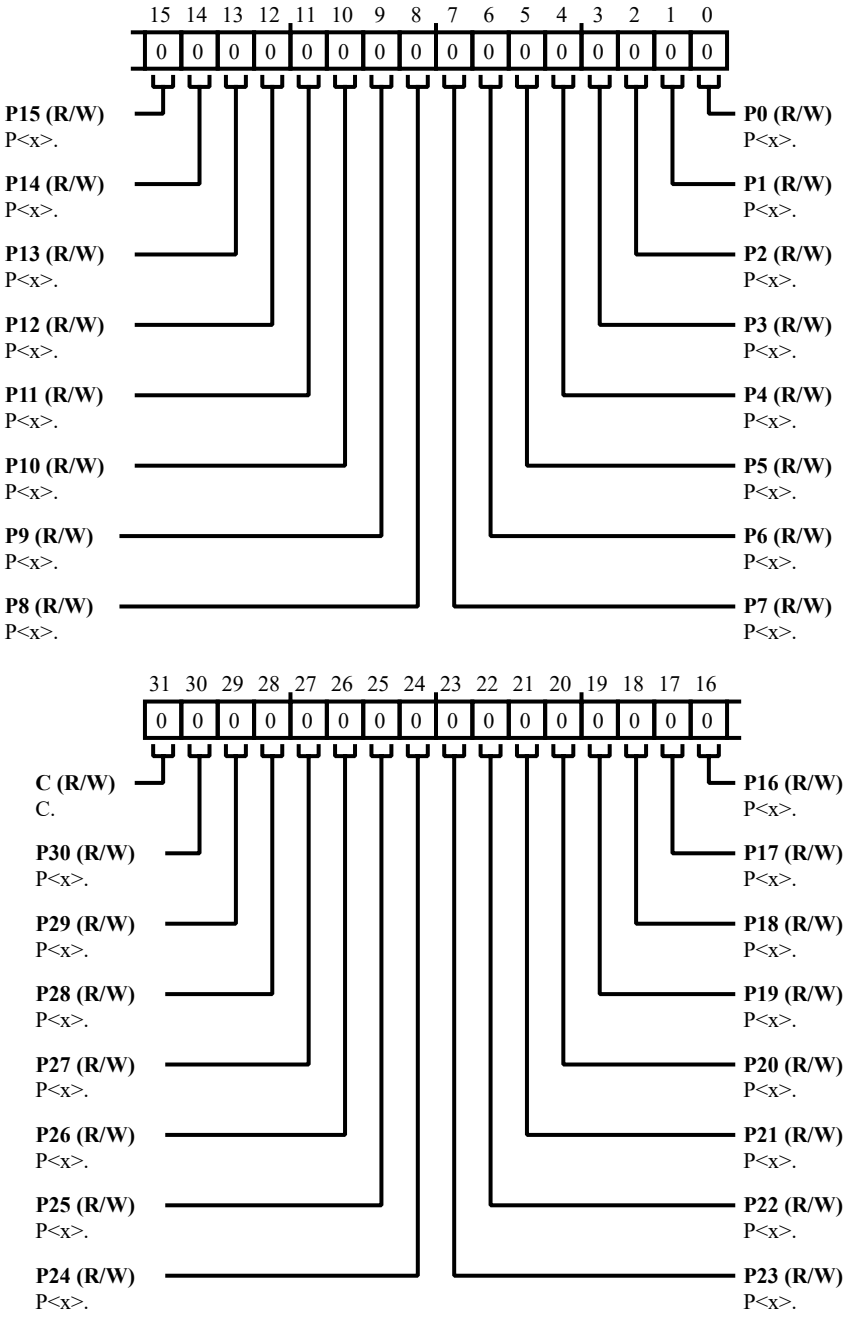

Figure 48-802: A55_C0_PMINTENCLR_EL1 Register Diagram

Table 48-809: A55_C0_PMINTENCLR_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow interrupt request disable bit. Possible values are: 0 When read, means the cycle counter overflow interrupt request is disabled. When written, has no effect. 1 When read, means the cycle counter overflow interrupt request is enabled. When written, disables the cycle count overflow interrupt request.	
		0	When read, means the cycle counter overflow interrupt request is disabled. When written, has no effect.
		1	When read, means the cycle counter overflow interrupt request is enabled. When written, disables the cycle count overflow interrupt request.
30 (R/W)	P30	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.
29 (R/W)	P29	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	P0	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Performance Monitors Interrupt Enable Set register.

Enables the generation of interrupt requests on overflows from the Cycle Count Register, PMCCNTR_EL0, and the event counters PMEVCNTR0_EL0. Reading the register shows which overflow interrupt requests are enabled.

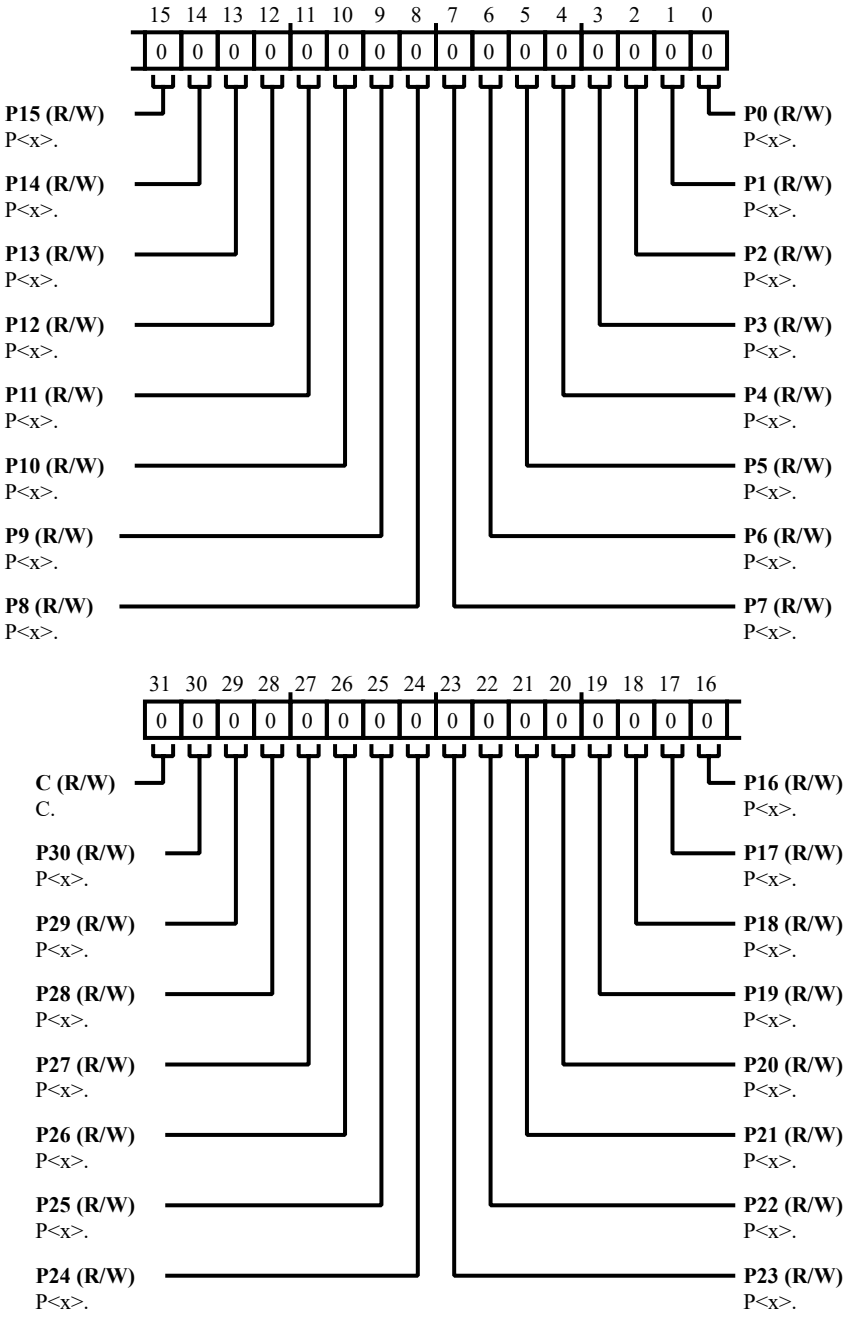

Figure 48-803: A55_C0_PMINTENSET_EL1 Register Diagram

Table 48-810: A55_C0_PMINTENSET_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow interrupt request enable bit. Possible values are: 0 When read, means the cycle counter overflow interrupt request is disabled. When written, has no effect. 1 When read, means the cycle counter overflow interrupt request is enabled. When written, enables the cycle count overflow interrupt request.	
		0	When read, means the cycle counter overflow interrupt request is disabled. When written, has no effect.
		1	When read, means the cycle counter overflow interrupt request is enabled. When written, enables the cycle count overflow interrupt request.
30 (R/W)	P30	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
29 (R/W)	P29	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
15 (R/W)	P15	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-810: A55_C0_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
14 (R/W)	P14	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
13 (R/W)	P13	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-810: A55_C0_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
12 (R/W)	P12	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
11 (R/W)	P11	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-810: A55_C0_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
10 (R/W)	P10	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
9 (R/W)	P9	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	P2	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
1 (R/W)	P1	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-810: A55_C0_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	P0	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Performance Monitors Integration mode Control register.

Enables the Performance Monitors to switch from default mode into integration mode, where test software can control directly the inputs and outputs of the PE, for integration testing or topology detection.

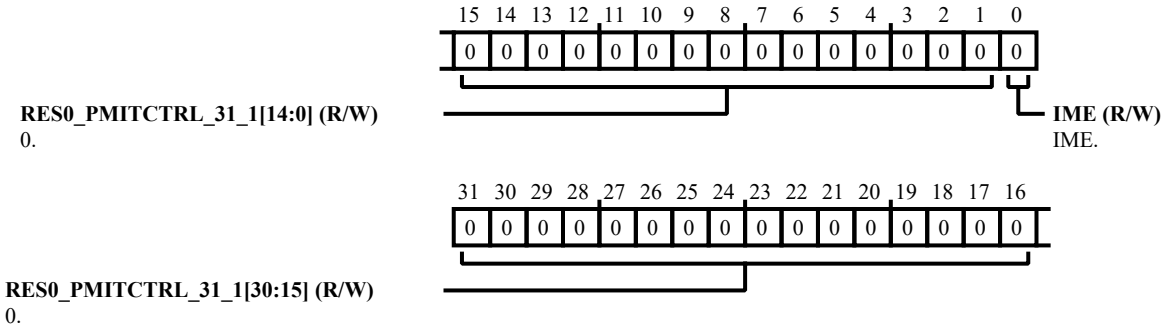

Figure 48-804: A55_C0_PMITCTRL Register Diagram

Table 48-811: A55_C0_PMITCTRL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_PMITCTRL_31_1	0.. Reserved, RES0.	
0 (R/W)	IME	IME.. Integration mode enable. When IME == 1, the device reverts to an integration mode to enable integration testing or topology detection. The integration mode behavior is IMPLEMENTATION DEFINED. 0 Normal operation. 1 Integration mode enabled.	
		0	Normal operation.
		1	Integration mode enabled.

Performance Monitors Overflow Flag Status Clear register.

Contains the state of the overflow bit for the Cycle Count Register, PMCCNTR_EL0, and each of the implemented event counters PMEVCNTR0. Writing to this register clears these bits.

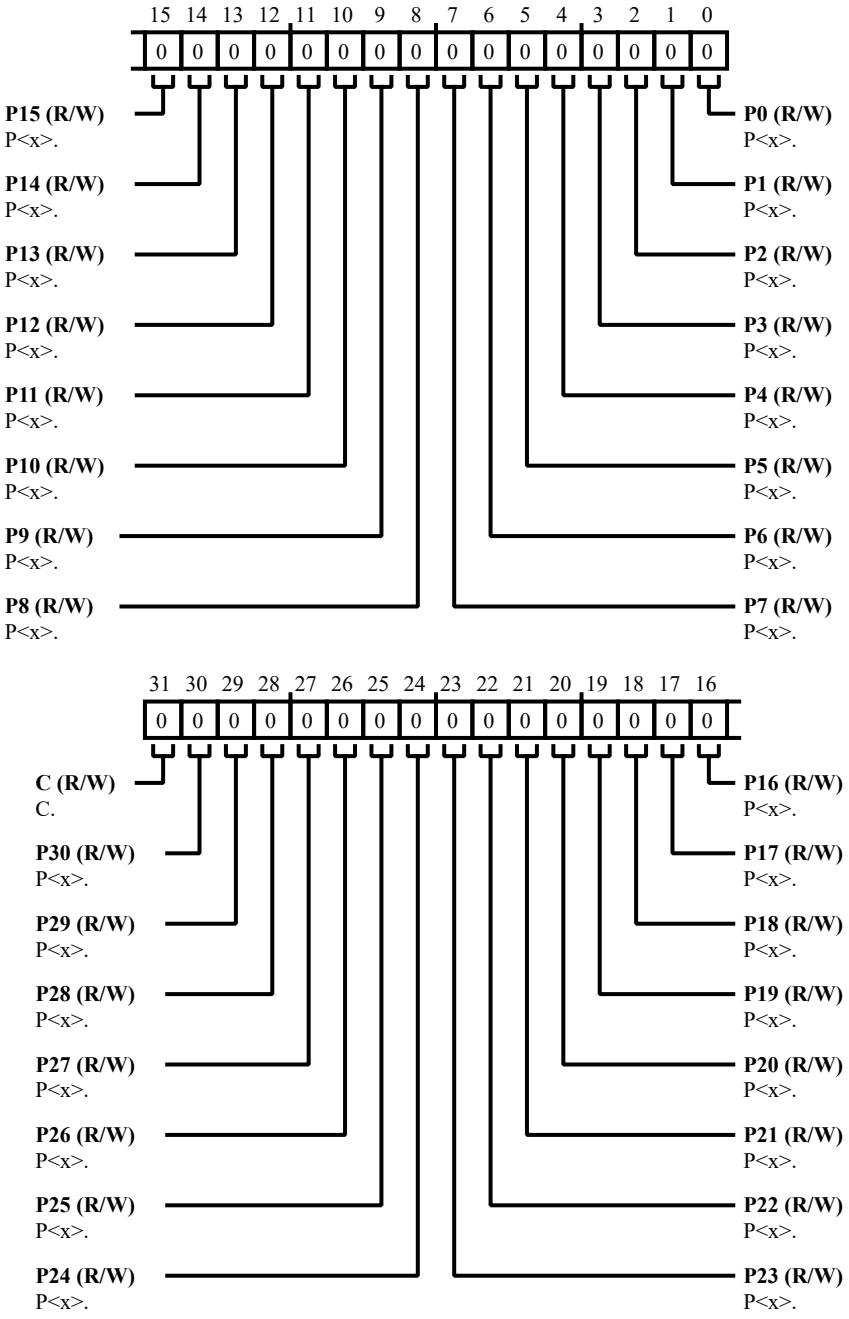

Figure 48-805: A55_C0_PMOVSCLR_EL0 Register Diagram

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow bit. Possible values are: 0 When read, means the cycle counter has not overflowed. When written, has no effect. 1 When read, means the cycle counter has overflowed. When written, clears the overflow bit to 0. PMCR_EL0.LC controls whether an overflow is detected from PMCCNTR_EL0[31] or from PMCCNTR_EL0[63].	
		0	When read, means the cycle counter has not overflowed. When written, has no effect.
		1	When read, means the cycle counter has overflowed. When written, clears the overflow bit to 0.
30 (R/W)	P30	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
29 (R/W)	P29	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	P28	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
27 (R/W)	P27	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
26 (R/W)	P26	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
25 (R/W)	P25	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
24 (R/W)	P24	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
23 (R/W)	P23	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
22 (R/W)	P22	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
21 (R/W)	P21	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
20 (R/W)	P20	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19 (R/W)	P19	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
18 (R/W)	P18	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
17 (R/W)	P17	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Bit No. (Access)	Bit Name	Description/Enumeration	
16 (R/W)	P16	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
15 (R/W)	P15	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
14 (R/W)	P14	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
13 (R/W)	P13	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
12 (R/W)	P12	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
11 (R/W)	P11	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Bit No. (Access)	Bit Name	Description/Enumeration	
4 (R/W)	P4	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
3 (R/W)	P3	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
2 (R/W)	P2	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-812: A55_C0_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/W)	P1	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
0 (R/W)	P0	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Performance Monitors Overflow Flag Status Set register.

Sets the state of the overflow bit for the Cycle Count Register, PMCCNTR_EL0, and each of the implemented event counters PMEVCNTR0.

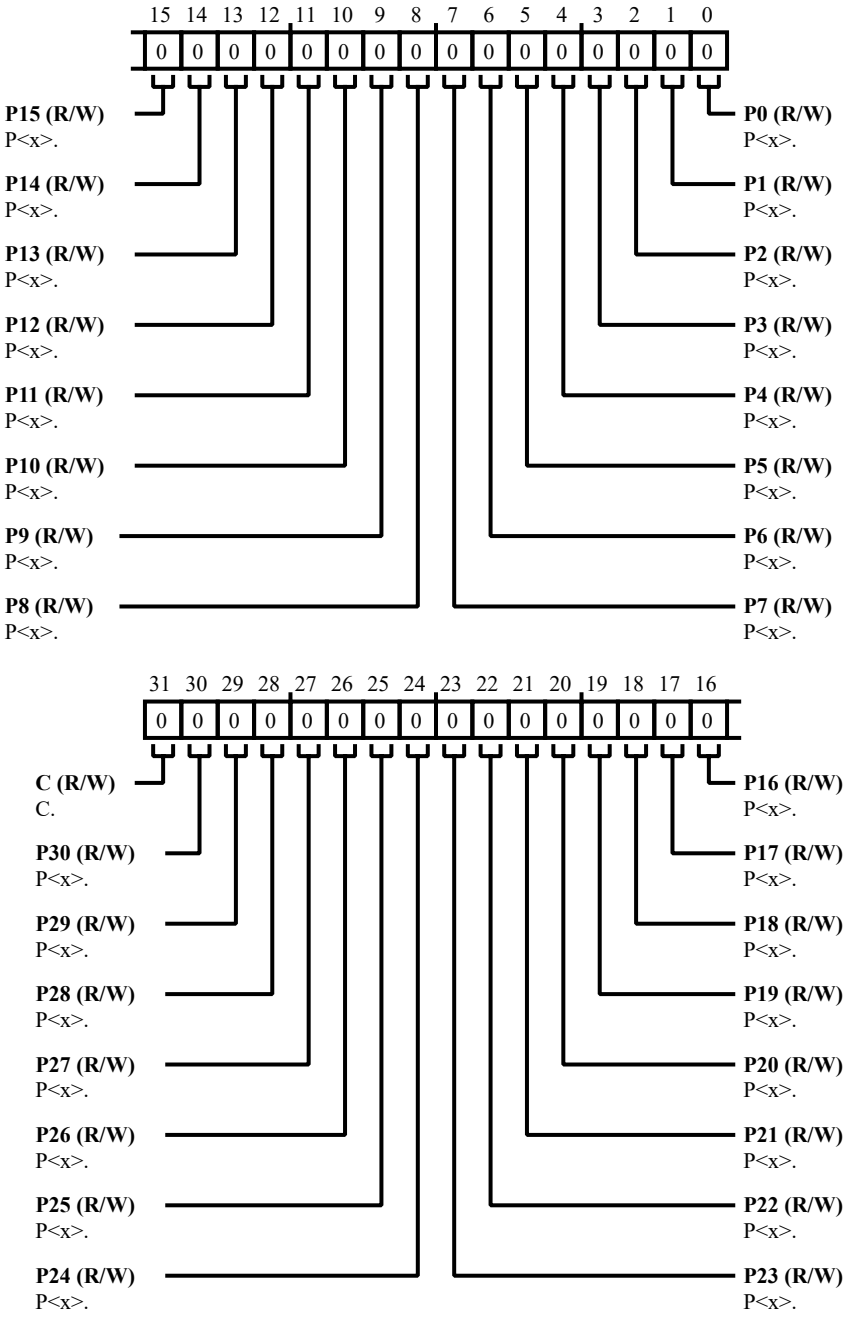

Figure 48-806: A55_C0_PMOVSSET_EL0 Register Diagram

Table 48-813: A55_C0_PMOVSSET_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow bit. Possible values are: 0 When read, means the cycle counter has not overflowed. When written, has no effect. 1 When read, means the cycle counter has overflowed. When written, sets the overflow bit to 1.	
		0	When read, means the cycle counter has not overflowed. When written, has no effect.
		1	When read, means the cycle counter has overflowed. When written, sets the overflow bit to 1.
30 (R/W)	P30	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
29 (R/W)	P29	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-813: A55_C0_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	P28	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
27 (R/W)	P27	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
26 (R/W)	P26	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
12 (R/W)	P12	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
11 (R/W)	P11	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-813: A55_C0_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
10 (R/W)	P10	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
9 (R/W)	P9	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
8 (R/W)	P8	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-813: A55_C0_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7 (R/W)	P7	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
6 (R/W)	P6	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
5 (R/W)	P5	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-813: A55_C0_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
4 (R/W)	P4	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
3 (R/W)	P3	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
2 (R/W)	P2	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-813: A55_C0_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/W)	P1	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
0 (R/W)	P0	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Performance Monitors Software Increment register.

Increments a counter that is configured to count the Software increment event, event 0x00. For more information, see .

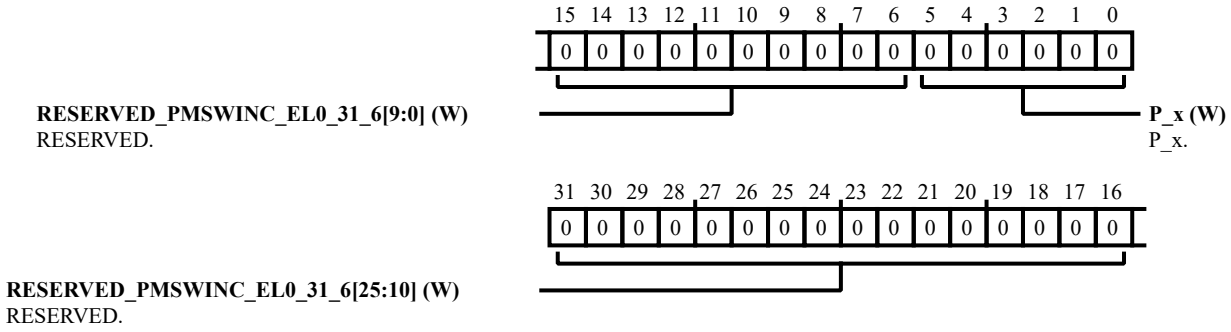

Figure 48-807: A55_C0_PMSWINC_EL0 Register Diagram

Table 48-814: A55_C0_PMSWINC_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:6 (RX/W)	RESERVED_PMSWINC_EL0_31_6	RESERVED.. Reserved RES0.	
		0	Reserved.
5:0 (RX/W)	P_X	P_x.. Event counter software increment bit for PMEVCNTR<x>.	
		0	No action. The write to this bit is ignored.
		1	It is CONSTRAINED UNPREDICTABLE whether a SW_INCR event is generated for event counter x.

ADSP-2184x A55_C2 Register Descriptions

Your module description, here. (A55_C2) contains the following registers.

Table 48-815: ADSP-2184x A55_C2 Register List

Name	Description
A55_C2_DBGBCR0_EL1	Debug Breakpoint Control Registers.
A55_C2_DBGBCR1_EL1	Debug Breakpoint Control Registers.
A55_C2_DBGBCR2_EL1	Debug Breakpoint Control Registers.
A55_C2_DBGBCR3_EL1	Debug Breakpoint Control Registers.
A55_C2_DBGBCR4_EL1	Debug Breakpoint Control Registers.

Table 48-815: ADSP-2184x A55_C2 Register List (Continued)

Name	Description
A55_C2_DBGBCR5_EL1	Debug Breakpoint Control Registers.
A55_C2_DBGCLAIMCLR_EL1	Debug Claim Tag Clear register.
A55_C2_DBGCLAIMSET_EL1	Debug Claim Tag Set register.
A55_C2_DBGDTRRX_EL0	Debug Data Transfer Register, Receive.
A55_C2_DBGDTRTX_EL0	Debug Data Transfer Register, Transmit.
A55_C2_DBGWCR0_EL1	Debug Watchpoint Control Registers.
A55_C2_DBGWCR1_EL1	Debug Watchpoint Control Registers.
A55_C2_DBGWCR2_EL1	Debug Watchpoint Control Registers.
A55_C2_DBGWCR3_EL1	Debug Watchpoint Control Registers.
A55_C2_DBGWVR0_EL1_31_0	Debug Watchpoint Value Registers.
A55_C2_DBGWVR0_EL1_63_32	Debug Watchpoint Value Registers.
A55_C2_DBGWVR1_EL1_31_0	Debug Watchpoint Value Registers.
A55_C2_DBGWVR1_EL1_63_32	Debug Watchpoint Value Registers.
A55_C2_DBGWVR2_EL1_31_0	Debug Watchpoint Value Registers.
A55_C2_DBGWVR2_EL1_63_32	Debug Watchpoint Value Registers.
A55_C2_DBGWVR3_EL1_31_0	Debug Watchpoint Value Registers.
A55_C2_DBGWVR3_EL1_63_32	Debug Watchpoint Value Registers.
A55_C2_EDCIDSR	External Debug Context ID Sample Register.
A55_C2_EDECCR	External Debug Exception Catch Control Register.
A55_C2_EDESR	External Debug Event Status Register.
A55_C2_EDITCTRL	External Debug Integration mode Control register.
A55_C2_EDITR	External Debug Instruction Transfer Register.
A55_C2_EDPRCR	External Debug Power/Reset Control Register.
A55_C2_EDPRSR	External Debug Processor Status Register.
A55_C2_EDRCR	External Debug Reserve Control Register.
A55_C2_EDSCR	External Debug Status and Control Register.
A55_C2_EDWAR_31_0	External Debug Watchpoint Address Register.
A55_C2_EDWAR_63_32	External Debug Watchpoint Address Register.
A55_C2_OSLAR_EL1	OS Lock Access Register.
A55_C2_TRCACATR0_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR0_63_32	Trace Address Comparator Access Type Registers.

Table 48-815: ADSP-2184x A55_C2 Register List (Continued)

Name	Description
A55_C2_TRCACATR1_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR1_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR2_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR2_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR3_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR3_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR4_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR4_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR5_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR5_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR6_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR6_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR7_31_0	Trace Address Comparator Access Type Registers.
A55_C2_TRCACATR7_63_32	Trace Address Comparator Access Type Registers.
A55_C2_TRCACVR0_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR0_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR1_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR1_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR2_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR2_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR3_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR3_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR4_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR4_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR5_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR5_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR6_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR6_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCACVR7_31_0	Trace Address Comparator Value Registers.
A55_C2_TRCACVR7_63_32	Trace Address Comparator Value Registers.
A55_C2_TRCAUXCTLR	Trace Auxiliary Control Register.

Table 48-815: ADSP-2184x A55_C2 Register List (Continued)

Name	Description
A55_C2_TRCBBCTLR	Trace Branch Broadcast Control Register.
A55_C2_TRCCCCTLR	Trace Cycle Count Control Register.
A55_C2_TRCCIDCCTLR0	Trace Context ID Comparator Control Register 0.
A55_C2_TRCCIDCVR0_31_0	Trace Context ID Comparator Value Registers.
A55_C2_TRCCIDCVR0_63_32	Trace Context ID Comparator Value Registers.
A55_C2_TRCCLAIMCLR	Trace Claim Tag Clear Register.
A55_C2_TRCCLAIMSET	Trace Claim Tag Set Register.
A55_C2_TRCCNTCTLR0	Trace Counter Control Registers.
A55_C2_TRCCNTCTLR1	Trace Counter Control Registers.
A55_C2_TRCCNTRLDVR0	Trace Counter Reload Value Registers.
A55_C2_TRCCNTRLDVR1	Trace Counter Reload Value Registers.
A55_C2_TRCCNTVR0	Trace Counter Value Registers.
A55_C2_TRCCNTVR1	Trace Counter Value Registers.
A55_C2_TRCCONFIGR	Trace Configuration Register.
A55_C2_TRCEVENTCTL0R	Trace Event Control 0 Register.
A55_C2_TRCEVENTCTL1R	Trace Event Control 1 Register.
A55_C2_TRCEXTINSELR	Trace External Input Select Register.
A55_C2_TRCIDR0	Trace ID Register 0.
A55_C2_TRCIDR1	Trace ID Register 1.
A55_C2_TRCIDR2	Trace ID Register 2.
A55_C2_TRCIDR3	Trace ID Register 3.
A55_C2_TRCIDR4	Trace ID Register 4.
A55_C2_TRCIDR5	Trace ID Register 5.
A55_C2_TRCIMSPEC0	Trace IMPLEMENTATION DEFINED Register 0.
A55_C2_TRCITATBIDR	Integration ATB Identification Register.
A55_C2_TRCITCTRL	Trace Integration Mode Control Register.
A55_C2_TRCITIATBINR	Integration Instruction ATB In Register.
A55_C2_TRCITIATBOUTR	Integration Instruction ATB Out Register.
A55_C2_TRCITIDATAR	Integration Instruction ATB Data Register.
A55_C2_TRCOSLAR	Trace OS Lock Access Register.
A55_C2_TRCOSLSR	Trace OS Lock Status Register.

Table 48-815: ADSP-2184x A55_C2 Register List (Continued)

Name	Description
A55_C2_TRCPDSR	Trace PowerDown Status Register.
A55_C2_TRCPRGCTLR	Trace Programming Control Register.
A55_C2_TRCRSCTLR10	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR11	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR12	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR13	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR14	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR15	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR2	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR3	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR4	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR5	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR6	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR7	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR8	Trace Resource Selection Control Registers.
A55_C2_TRCRSCTLR9	Trace Resource Selection Control Registers.
A55_C2_TRCSEQEVR0	Trace Sequencer State Transition Control Registers.
A55_C2_TRCSEQEVR1	Trace Sequencer State Transition Control Registers.
A55_C2_TRCSEQEVR2	Trace Sequencer State Transition Control Registers.
A55_C2_TRCSEQRSTEVR	Trace Sequencer Reset Control Register.
A55_C2_TRCSEQSTR	Trace Sequencer State Register.
A55_C2_TRCSSCCR0	Trace Single-Shot Comparator Control Registers.
A55_C2_TRCSSCSR0	Trace Single-Shot Comparator Status Registers.
A55_C2_TRCSTALLCTLR	Trace Stall Control Register.
A55_C2_TRCSTATR	Trace Status Register.
A55_C2_TRCSYNCPR	Trace Synchronization Period Register.
A55_C2_TRCTRACEIDR	Trace Trace ID Register.
A55_C2_TRCTSCTLR	Trace Global Timestamp Control Register.
A55_C2_TRCVICTLR	Trace ViewInst Main Control Register.
A55_C2_TRCVIIECTLR	Trace ViewInst Include/Exclude Control Register.
A55_C2_TRCVISSCTLR	Trace ViewInst Start/Stop Control Register.

Table 48-815: ADSP-2184x A55_C2 Register List (Continued)

Name	Description
A55_C2_TRCVMIDCVR0_31_0	Trace VMID Comparator Value Registers.
A55_C2_TRCVMIDCVR0_63_32	Trace VMID Comparator Value Registers.
A55_C2_PMCCFILTR_EL0	Performance Monitors Cycle Counter Filter Register.
A55_C2_PMCCNTR_EL0_31_0	Performance Monitors Cycle Counter.
A55_C2_PMCCNTR_EL0_63_32	Performance Monitors Cycle Counter.
A55_C2_PMCEID0	Performance Monitors Common Event Identification register 0.
A55_C2_PMCEID1	Performance Monitors Common Event Identification register 1.
A55_C2_PMCEID2	Performance Monitors Common Event Identification register 2.
A55_C2_PMCEID3	Performance Monitors Common Event Identification register 3.
A55_C2_PMCFGR	Performance Monitors Configuration Register.
A55_C2_PMCNTENCLR_EL0	Performance Monitors Count Enable Clear register.
A55_C2_PMCNTENSET_EL0	Performance Monitors Count Enable Set register.
A55_C2_PMCR_EL0	Performance Monitors Control Register.
A55_C2_PMEVCNTR0_EL0	Performance Monitors Event Count Registers.
A55_C2_PMEVCNTR1_EL0	Performance Monitors Event Count Registers.
A55_C2_PMEVCNTR2_EL0	Performance Monitors Event Count Registers.
A55_C2_PMEVCNTR3_EL0	Performance Monitors Event Count Registers.
A55_C2_PMEVCNTR4_EL0	Performance Monitors Event Count Registers.
A55_C2_PMEVCNTR5_EL0	Performance Monitors Event Count Registers.
A55_C2_PMEVTYPER0_EL0	Performance Monitors Event Type Registers.
A55_C2_PMEVTYPER1_EL0	Performance Monitors Event Type Registers.
A55_C2_PMEVTYPER2_EL0	Performance Monitors Event Type Registers.
A55_C2_PMEVTYPER3_EL0	Performance Monitors Event Type Registers.
A55_C2_PMEVTYPER4_EL0	Performance Monitors Event Type Registers.
A55_C2_PMEVTYPER5_EL0	Performance Monitors Event Type Registers.
A55_C2_PMINTENCLR_EL1	Performance Monitors Interrupt Enable Clear register.
A55_C2_PMINTENSET_EL1	Performance Monitors Interrupt Enable Set register.
A55_C2_PMITCTRL	Performance Monitors Integration mode Control register.
A55_C2_PMOVSCLR_EL0	Performance Monitors Overflow Flag Status Clear register.
A55_C2_PMOVSSET_EL0	Performance Monitors Overflow Flag Status Set register.
A55_C2_PMSWINC_EL0	Performance Monitors Software Increment register.

Debug Breakpoint Control Registers.

Holds control information for a breakpoint. Forms breakpoint n together with value register DBGBVR0_EL1.

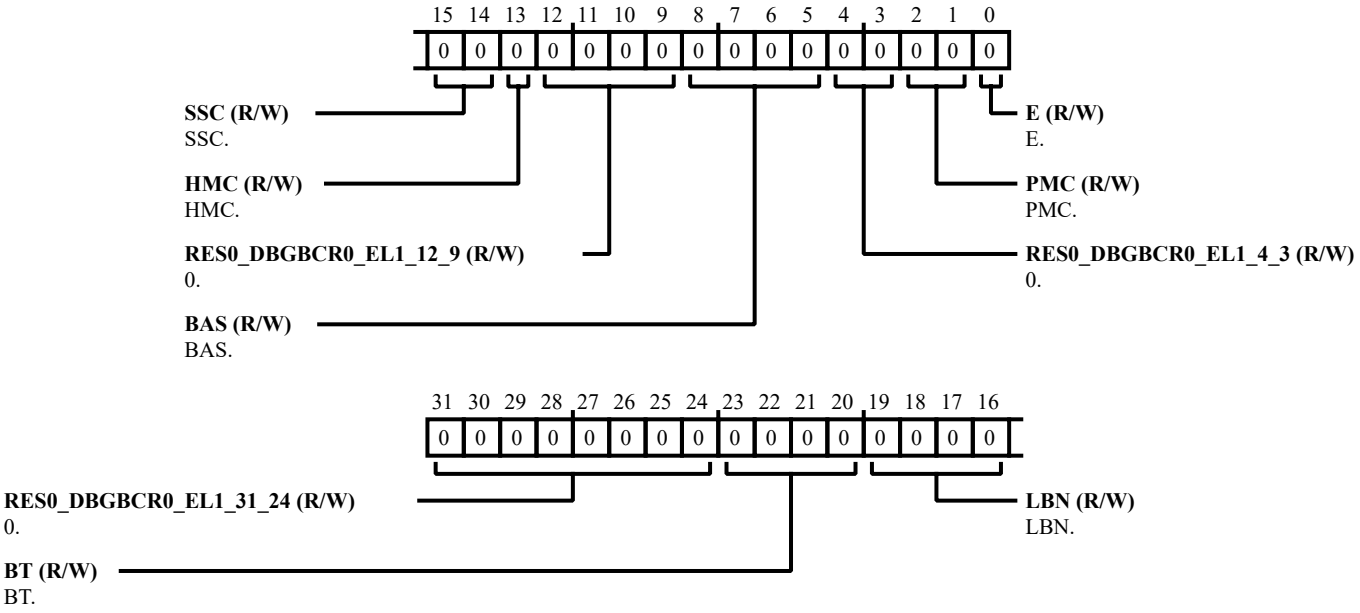

Figure 48-808: A55_C2_DBGBCR0_EL1 Register Diagram

Table 48-816: A55_C2_DBGBCR0_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:24 (R/W)	RES0_DBGBCR0_EL1_31_24	0.. Reserved, RES0.

Table 48-816: A55_C2_DBGBCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:20 (R/W)	BT	BT.. Breakpoint Type. Possible values are: 0000 Unlinked address match. 0001 Linked address match. 0010 Unlinked Context ID match. 0011 Linked Context ID match. 0100 Unlinked instruction address mismatch. 0101 Linked instruction address mismatch. 0110 Unlinked CONTEXTIDR_EL1 match (ARMv8.1). 0111 Linked CONTEXTIDR_EL1 match (ARMv8.1). 1000 Unlinked VMID match. 1001 Linked VMID match. 1010 Unlinked VMID and Context ID match. 1011 Linked VMID and Context ID match. 1100 Unlinked CONTEXTIDR_EL2 match (ARMv8.1). 1101 Linked CONTEXTIDR_EL2 match (ARMv8.1). 1110 Unlinked Full Context ID match (ARMv8.1). 1111 Linked Full Context ID match (ARMv8.1). The field breaks down as follows: BT[3:1]: Base type.000Match address. DBGBVR<n>_EL1 is the address of an instruction.001Match Context ID. DBGBVR<n>_EL1.ContextID is a Context ID compared against CONTEXTIDR_EL1 in ARMv8.0, and in ARMv8.1 when not in a Host OS or a Host Application. In ARMv8.1, when in a Host OS or Host Application, the Context ID is compared against CONTEXTIDR_EL1.010Mismatch address. DBGBVR<n>_EL1 is the address of an instruction to be stepped.011Match CONTEXTIDR_EL1. DBGBVR<n>_EL1.ContextID is a Context ID compared against CONTEXTIDR_EL1.100Match VMID. DBGBVR<n>_EL1.VMID is a VMID compared against VTTBR_EL2.VMID.101Match VMID and Context ID. DBGBVR<n>_EL1.ContextID is a Context ID compared against CONTEXTIDR_EL1, and DBGBVR<n>_EL1.VMID is a VMID compared against VTTBR_EL2.VMID.110Match CONTEXTIDR_EL2. DBGBVR<n>_EL1.ContextID2 is a Context ID compared against CONTEXTIDR_EL2.111Match Full Context ID. DBGBVR<n>_EL1.ContextID is compared against CONTEXTIDR_EL1, and DBGBVR<n>_EL1.ContextID2 is compared against CONTEXTIDR_EL2. BT[0]: Enable linking. All other values are reserved. Constraints on breakpoint programming mean other values are reserved under some conditions. For more information, including the effect of programming this field to a reserved value, see .	
		0	Unlinked address match.
		1	Linked address match.
		2	Unlinked Context ID match.
		3	Linked Context ID match.
		4	Unlinked instruction address mismatch.
		5	Linked instruction address mismatch.
		6	Unlinked CONTEXTIDR_EL1 match (ARMv8.1).
		7	Linked CONTEXTIDR_EL1 match (ARMv8.1).
		8	Unlinked VMID match.
		9	Linked VMID match.

Table 48-816: A55_C2_DBGBCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
		10	Unlinked VMID and Context ID match.
		11	Linked VMID and Context ID match.
		12	Unlinked CONTEXTIDR_EL2 match (ARMv8.1).
		13	Linked CONTEXTIDR_EL2 match (ARMv8.1).
		14	Unlinked Full Context ID match (ARMv8.1).
		15	Linked Full Context ID match (ARMv8.1).
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked address matching breakpoints, this specifies the index of the Context-matching breakpoint linked to. For all other breakpoint types this field is ignored and reads of the register return an UNKNOWN value. This field is ignored when the value of DBGBCR<n>_EL1.E is 0.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the HMC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information, including the effect of programming the fields to a reserved set of values, see .	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see DBGBCR<n>_EL1.SSC description.	
12:9 (R/W)	RES0_DBGBCR0_EL1_12_9	0.. Reserved, RES0.	

Table 48-816: A55_C2_DBGBCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
8:5 (R/W)	BAS	BAS.. Byte address select. Defines which half-words an address-matching breakpoint matches, regardless of the instruction set and Execution state. In an AArch64-only implementation, this field is reserved, RES1. The permitted values depend on the breakpoint type. For Address match breakpoints in either AArch32 or AArch64 state, the permitted values are: BAS Match instruction at Constraint for debuggers 0011 DBGBVR<n>_EL1 Use for T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for T32 instructions. 1111 DBGBVR<n>_EL1 Use for A64 and A32 instructions. All other values are reserved. For more information, see . For Address mismatch breakpoints in an AArch32 stage 1 translation regime, the permitted values are: BAS Step instruction at Constraint for debuggers 0000 - Use for a match anywhere breakpoint. 0011 DBGBVR<n>_EL1 Use for stepping T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for stepping T32 instructions. 1111 DBGBVR<n>_EL1 Use for stepping A64 and A32 instructions. For more information, see . For Context matching breakpoints, this field is RES1 and ignored.	
4:3 (R/W)	RES0_DBGBCR0_EL1_4_3	0.. Reserved, RES0.	
2:1 (R/W)	PMC	PMC.. Privilege mode control. Determines the Exception level or levels at which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and HMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see the DBGBCR<n>_EL1.SSC description.	
0 (R/W)	E	E.. Enable breakpoint DBGBVR<n>_EL1. Possible values are: 0 Breakpoint disabled. 1 Breakpoint enabled.	
		0	Breakpoint disabled.
		1	Breakpoint enabled.

Debug Breakpoint Control Registers.

Holds control information for a breakpoint. Forms breakpoint n together with value register DBGBVR1_EL1.

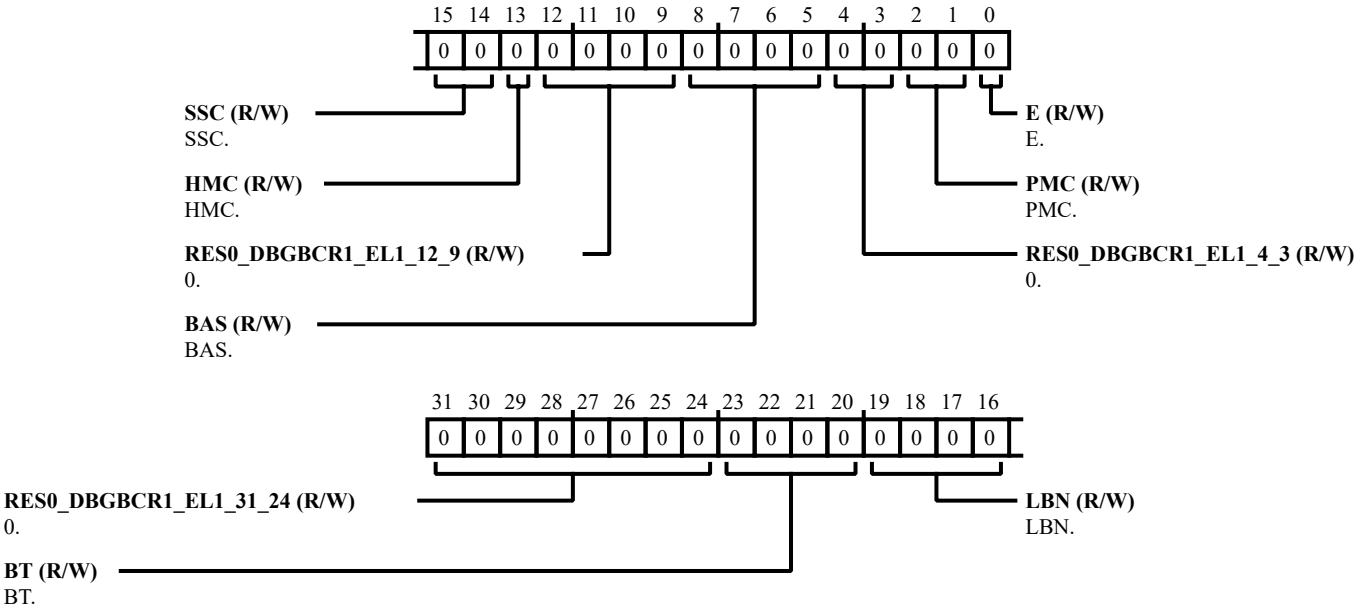

Figure 48-809: A55_C2_DBGBCR1_EL1 Register Diagram

Table 48-817: A55_C2_DBGBCR1_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:24 (R/W)	RES0_DBGBCR1_EL1_31_24	0.. Reserved, RES0.

		10	Unlinked VMID and Context ID match.
		11	Linked VMID and Context ID match.
		12	Unlinked CONTEXTIDR_EL2 match (ARMv8.1).
		13	Linked CONTEXTIDR_EL2 match (ARMv8.1).
		14	Unlinked Full Context ID match (ARMv8.1).
		15	Linked Full Context ID match (ARMv8.1).
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked address matching breakpoints, this specifies the index of the Context-matching breakpoint linked to. For all other breakpoint types this field is ignored and reads of the register return an UNKNOWN value. This field is ignored when the value of DBGBCR<n>_EL1.E is 0.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the HMC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information, including the effect of programming the fields to a reserved set of values, see .	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and PMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see DBGBCR<n>_EL1.SSC description.	
12:9 (R/W)	RES0_DBGBCR4_EL1_12_9	0.. Reserved, RES0.	

Table 48-820: A55_C2_DBGBCR4_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
8:5 (R/W)	BAS	BAS.. Byte address select. Defines which half-words an address-matching breakpoint matches, regardless of the instruction set and Execution state. In an AArch64-only implementation, this field is reserved, RES1. The permitted values depend on the breakpoint type. For Address match breakpoints in either AArch32 or AArch64 state, the permitted values are: BAS Match instruction at Constraint for debuggers 0011 DBGBVR<n>_EL1 Use for T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for T32 instructions. 1111 DBGBVR<n>_EL1 Use for A64 and A32 instructions. All other values are reserved. For more information, see . For Address mismatch breakpoints in an AArch32 stage 1 translation regime, the permitted values are: BAS Step instruction at Constraint for debuggers 0000 - Use for a match anywhere breakpoint. 0011 DBGBVR<n>_EL1 Use for stepping T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for stepping T32 instructions. 1111 DBGBVR<n>_EL1 Use for stepping A64 and A32 instructions. For more information, see . For Context matching breakpoints, this field is RES1 and ignored.
4:3 (R/W)	RES0_DBGBCR4_EL1_4_3	0.. Reserved, RES0.
2:1 (R/W)	PMC	PMC.. Privilege mode control. Determines the Exception level or levels at which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and HMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see the DBGBCR<n>_EL1.SSC description.
0 (R/W)	E	E.. Enable breakpoint DBGBVR<n>_EL1. Possible values are: 0 Breakpoint disabled. 1 Breakpoint enabled. 0 Breakpoint disabled. 1 Breakpoint enabled.

Debug Breakpoint Control Registers.

Holds control information for a breakpoint. Forms breakpoint n together with value register DBGBVR5_EL1.

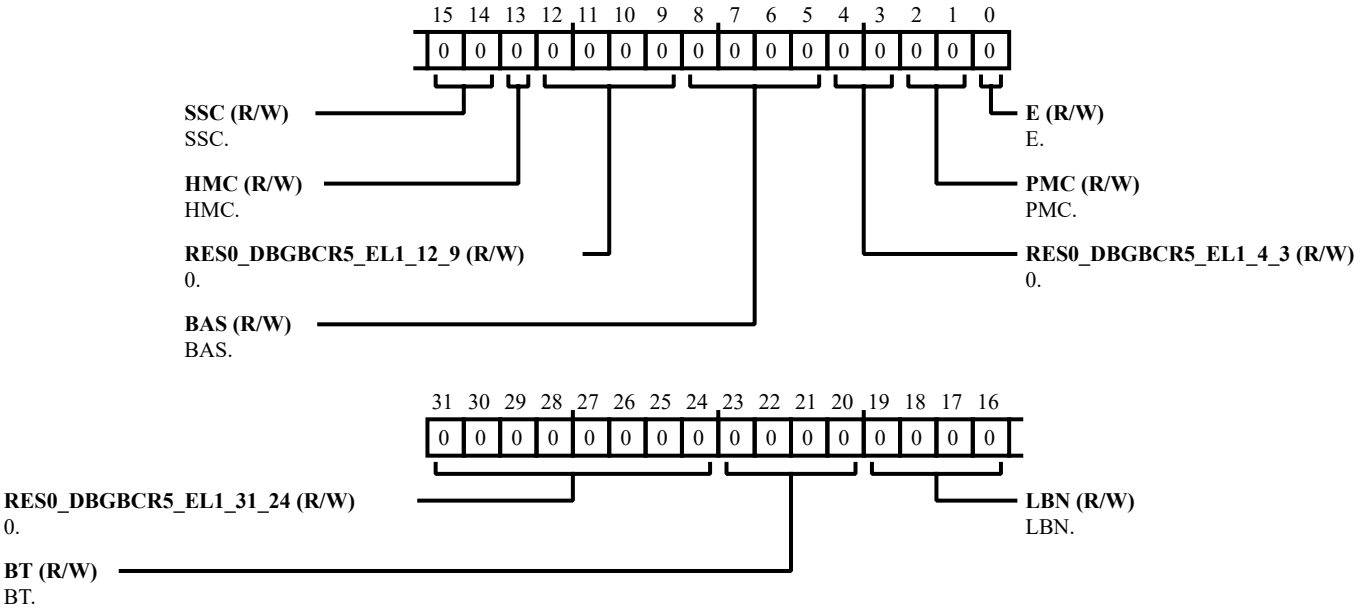

Figure 48-813: A55_C2_DBGBCR5_EL1 Register Diagram

Table 48-821: A55_C2_DBGBCR5_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:24 (R/W)	RES0_DBGBCR5_EL1_31_24	0.. Reserved, RES0.

Table 48-821: A55_C2_DBGBCR5_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:20 (R/W)	BT	BT.. Breakpoint Type. Possible values are: 0000 Unlinked address match. 0001 Linked address match. 0010 Unlinked Context ID match. 0011 Linked Context ID match. 0100 Unlinked instruction address mismatch. 0101 Linked instruction address mismatch. 0110 Unlinked CONTEXTIDR_EL1 match (ARMv8.1). 0111 Linked CONTEXTIDR_EL1 match (ARMv8.1). 1000 Unlinked VMID match. 1001 Linked VMID match. 1010 Unlinked VMID and Context ID match. 1011 Linked VMID and Context ID match. 1100 Unlinked CONTEXTIDR_EL2 match (ARMv8.1). 1101 Linked CONTEXTIDR_EL2 match (ARMv8.1). 1110 Unlinked Full Context ID match (ARMv8.1). 1111 Linked Full Context ID match (ARMv8.1). The field breaks down as follows: BT[3:1]: Base type.000Match address. DBGBVR<n>_EL1 is the address of an instruction.001Match Context ID. DBGBVR<n>_EL1.ContextID is a Context ID compared against CONTEXTIDR_EL1 in ARMv8.0, and in ARMv8.1 when not in a Host OS or a Host Application. In ARMv8.1, when in a Host OS or Host Application, the Context ID is compared against CONTEXTIDR_EL1.010Mismatch address. DBGBVR<n>_EL1 is the address of an instruction to be stepped.011Match CONTEXTIDR_EL1. DBGBVR<n>_EL1.ContextID is a Context ID compared against CONTEXTIDR_EL1.100Match VMID. DBGBVR<n>_EL1.VMID is a VMID compared against VTTBR_EL2.VMID.101Match VMID and Context ID. DBGBVR<n>_EL1.ContextID is a Context ID compared against CONTEXTIDR_EL1, and DBGBVR<n>_EL1.VMID is a VMID compared against VTTBR_EL2.VMID.110Match CONTEXTIDR_EL2. DBGBVR<n>_EL1.ContextID2 is a Context ID compared against CONTEXTIDR_EL2.111Match Full Context ID. DBGBVR<n>_EL1.ContextID is compared against CONTEXTIDR_EL1, and DBGBVR<n>_EL1.ContextID2 is compared against CONTEXTIDR_EL2. BT[0]: Enable linking. All other values are reserved. Constraints on breakpoint programming mean other values are reserved under some conditions. For more information, including the effect of programming this field to a reserved value, see .	
		0	Unlinked address match.

For Address mismatch breakpoints in an AArch32 stage 1 translation regime, the permitted values are: BAS Step instruction at Constraint for debuggers 0000 - Use for a match anywhere breakpoint. 0011 DBGBVR<n>_EL1 Use for stepping T32 instructions. 1100 DBGBVR<n>_EL1+2 Use for stepping T32 instructions. 1111 DBGBVR<n>_EL1 Use for stepping A64 and A32 instructions. For more information, see . For Context matching breakpoints, this field is RES1 and ignored.
4:3 (R/W)	RES0_DBGBCR5_EL1_4_3	0.. Reserved, RES0.
2:1 (R/W)	PMC	PMC.. Privilege mode control. Determines the Exception level or levels at which a Breakpoint debug event for breakpoint n is generated. This field must be interpreted along with the SSC and HMC fields, and there are constraints on the permitted values of the {HMC, SSC, PMC} fields. For more information see the DBGBCR<n>_EL1.SSC description.
0 (R/W)	E	E.. Enable breakpoint DBGBVR<n>_EL1. Possible values are: 0 Breakpoint disabled. 1 Breakpoint enabled. 0 Breakpoint disabled. 1 Breakpoint enabled.

Debug Claim Tag Clear register.

Used by software to read the values of the CLAIM tag bits, and to clear these bits to 0.

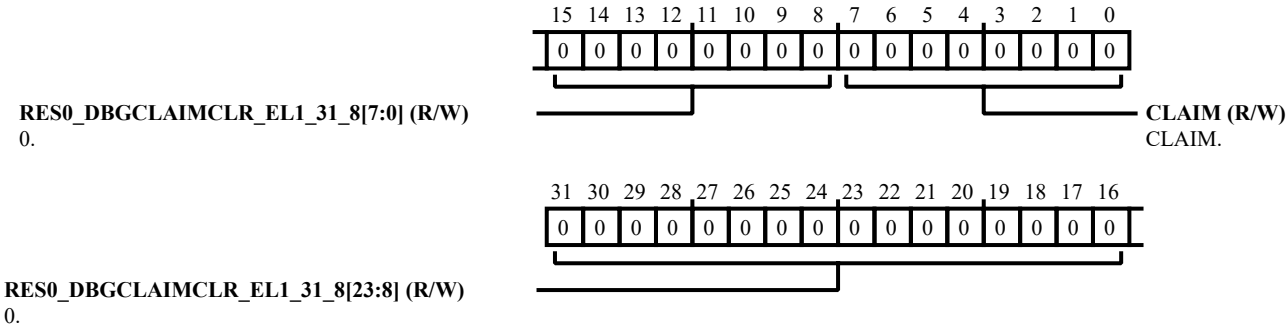

Figure 48-814: A55_C2_DBGCLAIMCLR_EL1 Register Diagram

Table 48-822: A55_C2_DBGCLAIMCLR_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_DBGCLAIMCLR_EL1_31_8	0.. Reserved, RAZ/SBZ. Software can rely on these bits reading as zero, and must use a should-be-zero policy on writes. Implementations must ignore writes.
7:0 (R/W)	CLAIM	CLAIM.. Read or clear CLAIM tag bits. Reading this field returns the current value of the CLAIM tag bits. Writing a 1 to one of these bits clears the corresponding CLAIM tag bit to 0. This is an indirect write to the CLAIM tag bits. A single write operation can clear multiple CLAIM tag bits to 0. Writing 0 to one of these bits has no effect. A cold reset clears the CLAIM tag bits to 0.

Debug Claim Tag Set register.

Used by software to set the CLAIM tag bits to 1.

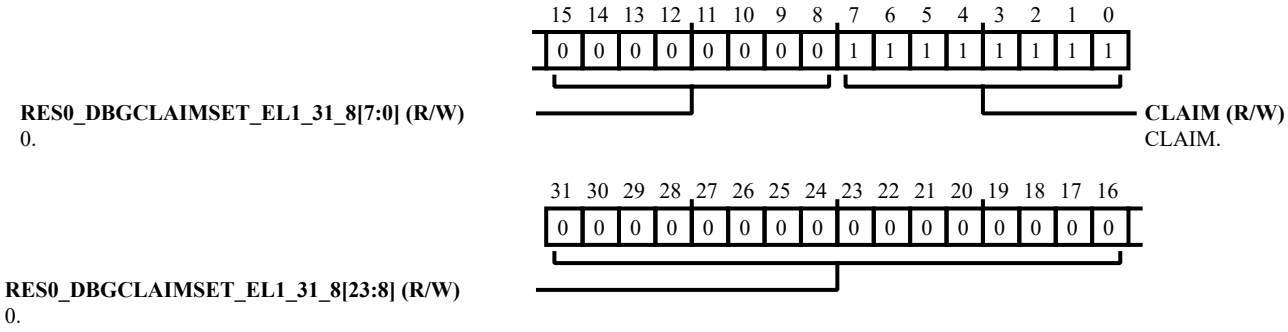

Figure 48-815: A55_C2_DBGCLAIMSET_EL1 Register Diagram

Table 48-823: A55_C2_DBGCLAIMSET_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_DBGCLAIM-SET_EL1_31_8	0.. Reserved, RAZ/SBZ. Software can rely on these bits reading as zero, and must use a should-be-zero policy on writes. Implementations must ignore writes.
7:0 (R/W)	CLAIM	CLAIM.. Set CLAIM tag bits. RAO. Writing a 1 to one of these bits sets the corresponding CLAIM tag bit to 1. This is an indirect write to the CLAIM tag bits. A single write operation can set multiple CLAIM tag bits to 1. Writing 0 to one of these bits has no effect. A cold reset clears the CLAIM tag bits to 0.

Debug Data Transfer Register, Receive.

Transfers data from an external debugger to the PE. For example, it is used by a debugger transferring commands and data to a debug target. It is a component of the Debug Communications Channel.

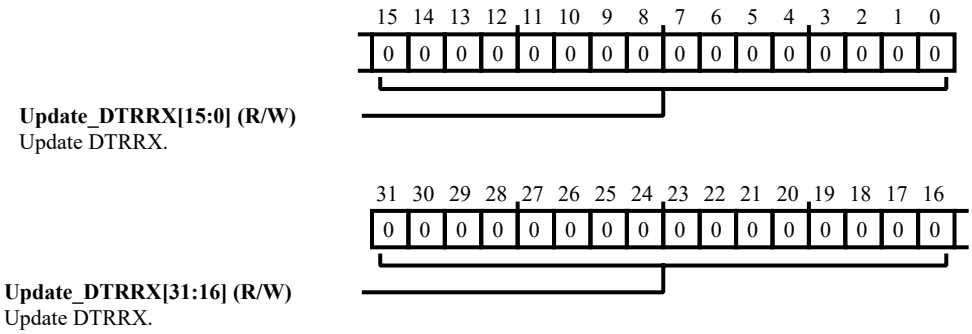

Figure 48-816: A55_C2_DBGDTRRX_EL0 Register Diagram

Table 48-824: A55_C2_DBGDTRRX_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	UPDATE_DTRRX	Update DTRRX.. Update DTRRX. If RXfull is set to 0, then writes to this register update the value in DTRRX and set RXfull to 1. Reads of this register return the last value written to DTRRX and do not change RXfull. For the full behavior of the Debug Communications Channel, see .

Debug Data Transfer Register, Transmit.

Transfers data from the PE to an external debugger. For example, it is used by a debug target to transfer data to the debugger. It is a component of the Debug Communication Channel.

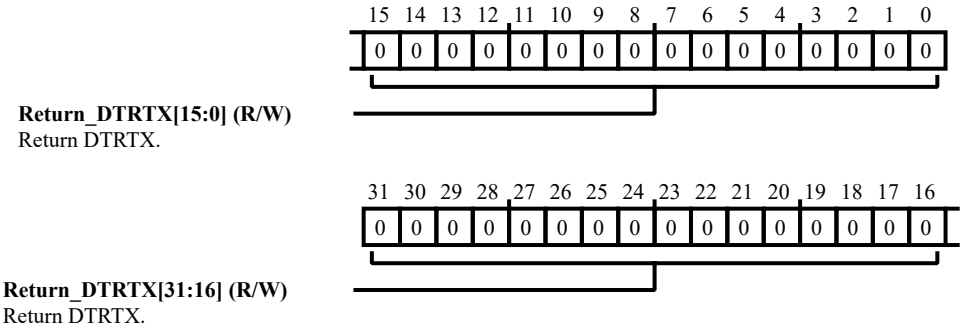

Figure 48-817: A55_C2_DBGDTRTX_EL0 Register Diagram

Table 48-825: A55_C2_DBGDTRTX_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	RETURN_DTRTX	Return DTRTX.. Return DTRTX. If TXfull is set to 1, then reads of this register return the value in DTRTX and clear TXfull to 0. Writes of this register update the value in DTRTX and do not change TXfull. For the full behavior of the Debug Communications Channel, see .

Debug Watchpoint Control Registers.

Holds control information for a watchpoint. Forms watchpoint n together with value register DBGWVR0_EL1.

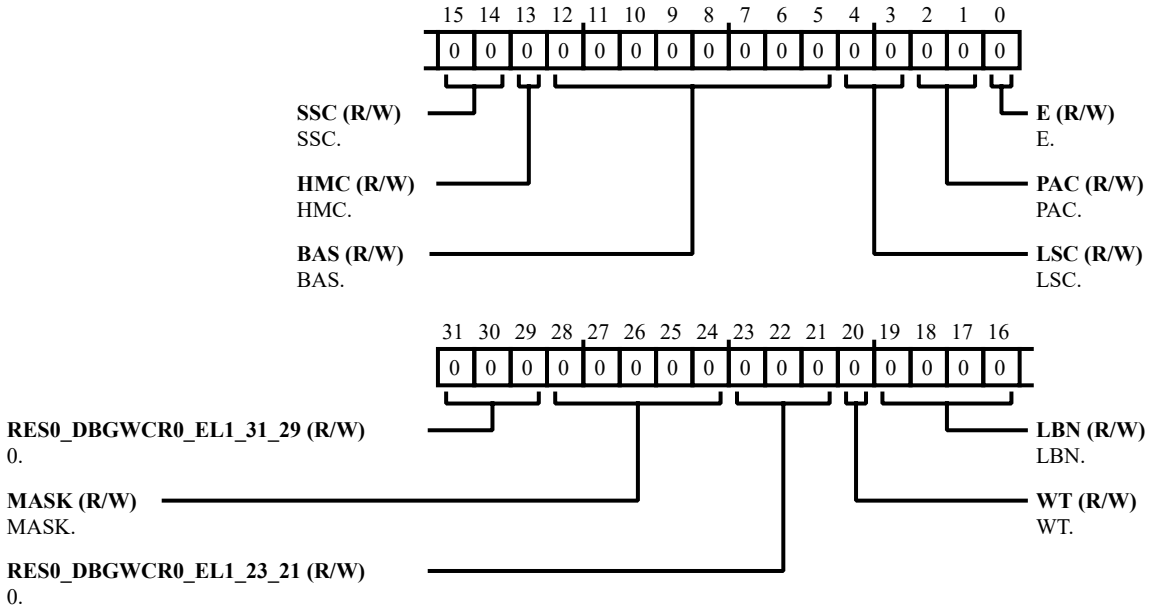

Figure 48-818: A55_C2_DBGWCR0_EL1 Register Diagram

Table 48-826: A55_C2_DBGWCR0_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/W)	RES0_DBGWCR0_EL1_31_29	0.. Reserved, RES0.	
28:24 (R/W)	MASK	MASK.. Address mask. Only objects up to 2GB can be watched using a single mask. 00000 No mask. 00001 Reserved. 00010 Reserved. If programmed with a reserved value, a watchpoint must behave as if either: MASK has been programmed with a defined value, which might be 0 (no mask), other than for a direct read of DBGWCRn_EL1. The watchpoint is disabled. Software must not rely on this property because the behavior of reserved values might change in a future revision of the architecture. Other values mask the corresponding number of address bits, from 0b00011 masking 3 address bits (0x00000007 mask for address) to 0b11111 masking 31 address bits (0x7FFFFFFF mask for address).	
		0	No mask.
		1	Reserved.
		2	Reserved.

Table 48-826: A55_C2_DBGWCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:21 (R/W)	RES0_DBGWCR0_EL1_23_21	0.. Reserved, RES0.	
20 (R/W)	WT	WT.. Watchpoint type. Possible values are: 0 Unlinked data address match. 1 Linked data address match.	
		0	Unlinked data address match.
		1	Linked data address match.
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked data address watchpoints, this specifies the index of the Context-matching breakpoint linked to.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the HMC and PAC fields.	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and PAC fields.	
12:5 (R/W)	BAS	BAS.. Byte address select. Each bit of this field selects whether a byte from within the word or double-word addressed by DBGWVR<n>_EL1 is being watched. BAS Description xxxxxxx1 Match byte at DBGWVR<n>_EL1 xxxxxx1x Match byte at DBGWVR<n>_EL1+1 xxxxx1xx Match byte at DBGWVR<n>_EL1+2 xxxx1xxx Match byte at DBGWVR<n>_EL1+3 In cases where DBGWVR<n>_EL1 addresses a double-word: BAS Description, if DBGWVR<n>_EL1[2] == 0 xxx1xxxx Match byte at DBGWVR<n>_EL1+4 xx1xxxxx Match byte at DBGWVR<n>_EL1+5 x1xxxxxx Match byte at DBGWVR<n>_EL1+6 1xxxxxxx Match byte at DBGWVR<n>_EL1+7 If DBGWVR<n>_EL1[2] == 1, only BAS[3:0] is used. ARM deprecates setting DBGWVR<n>_EL1[2] == 1. The valid values for BAS are non-zero binary number all of whose set bits are contiguous. All other values are reserved and must not be used by software. See.	

Table 48-826: A55_C2_DBGWCR0_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
4:3 (R/W)	LSC	LSC.. Load/store control. This field enables watchpoint matching on the type of access being made. Possible values of this field are: 01 Match instructions that load from a watchpointed address. 10 Match instructions that store to a watchpointed address. 11 Match instructions that load from or store to a watchpointed address. All other values are reserved, but must behave as if the watchpoint is disabled. Software must not rely on this property as the behavior of reserved values might change in a future revision of the architecture.	
		1	Match instructions that load from a watchpointed address.
		2	Match instructions that store to a watchpointed address.
		3	Match instructions that load from or store to a watchpointed address.
2:1 (R/W)	PAC	PAC.. Privilege of access control. Determines the Exception level or levels at which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and HMC fields.	
0 (R/W)	E	E.. Enable watchpoint n. Possible values are: 0 Watchpoint disabled. 1 Watchpoint enabled.	
		0	Watchpoint disabled.
		1	Watchpoint enabled.

Debug Watchpoint Control Registers.

Holds control information for a watchpoint. Forms watchpoint n together with value register DBGWVR1_EL1.

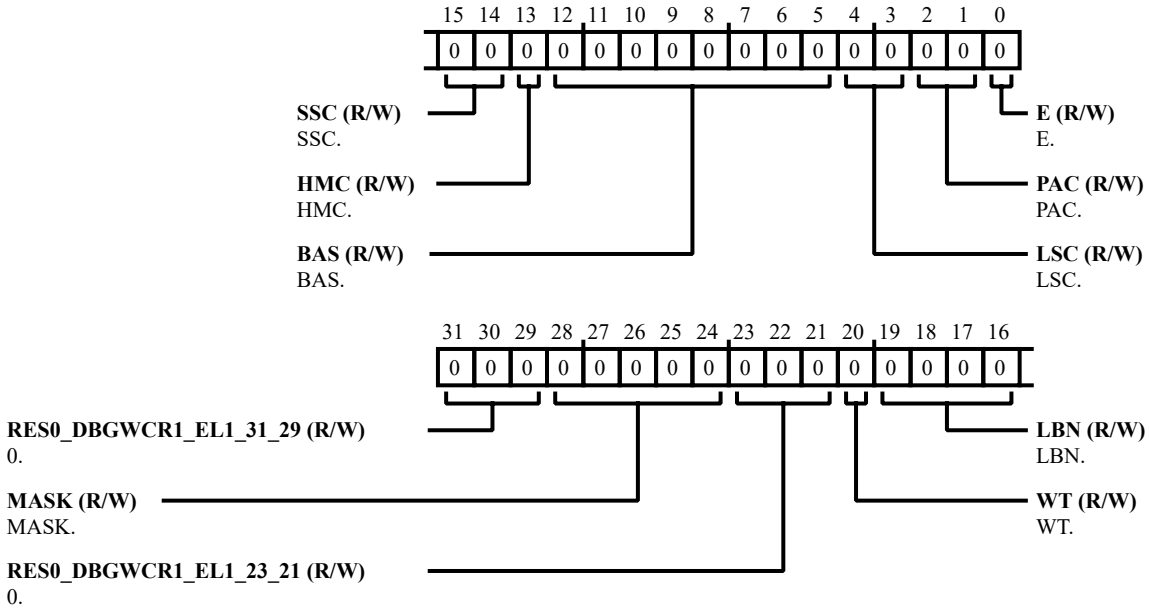

Figure 48-819: A55_C2_DBGWCR1_EL1 Register Diagram

Table 48-827: A55_C2_DBGWCR1_EL1 Register Fields

28:24 (R/W)	MASK	MASK.. Address mask. Only objects up to 2GB can be watched using a single mask. 00000 No mask. 00001 Reserved. 00010 Reserved. If programmed with a reserved value, a watchpoint must behave as if either: MASK has been programmed with a defined value, which might be 0 (no mask), other than for a direct read of DBGWCRn_EL1. The watchpoint is disabled. Software must not rely on this property because the behavior of reserved values might change in a future revision of the architecture. Other values mask the corresponding number of address bits, from 0b00011 masking 3 address bits (0x00000007 mask for address) to 0b11111 masking 31 address bits (0x7FFFFFFF mask for address).	
		0	No mask.
		1	Reserved.
		2	Reserved.

Table 48-829: A55_C2_DBGWCR3_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:21 (R/W)	RES0_DBGWCR3_EL1_23_21	0.. Reserved, RES0.	
20 (R/W)	WT	WT.. Watchpoint type. Possible values are: 0 Unlinked data address match. 1 Linked data address match.	
		0	Unlinked data address match.
		1	Linked data address match.
19:16 (R/W)	LBN	LBN.. Linked breakpoint number. For Linked data address watchpoints, this specifies the index of the Context-matching breakpoint linked to.	
15:14 (R/W)	SSC	SSC.. Security state control. Determines the Security states under which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the HMC and PAC fields.	
13 (R/W)	HMC	HMC.. Higher mode control. Determines the debug perspective for deciding when a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and PAC fields.	
12:5 (R/W)	BAS	BAS.. Byte address select. Each bit of this field selects whether a byte from within the word or double-word addressed by DBGWVR<n>_EL1 is being watched. BAS Description xxxxxxx1 Match byte at DBGWVR<n>_EL1 xxxxxx1x Match byte at DBGWVR<n>_EL1+1 xxxxx1xx Match byte at DBGWVR<n>_EL1+2 xxxx1xxx Match byte at DBGWVR<n>_EL1+3 In cases where DBGWVR<n>_EL1 addresses a double-word: BAS Description, if DBGWVR<n>_EL1[2] == 0 xxx1xxxx Match byte at DBGWVR<n>_EL1+4 xx1xxxxx Match byte at DBGWVR<n>_EL1+5 x1xxxxxx Match byte at DBGWVR<n>_EL1+6 1xxxxxxx Match byte at DBGWVR<n>_EL1+7 If DBGWVR<n>_EL1[2] == 1, only BAS[3:0] is used. ARM deprecates setting DBGWVR<n>_EL1[2] == 1. The valid values for BAS are non-zero binary number all of whose set bits are contiguous. All other values are reserved and must not be used by software. See.	

Table 48-829: A55_C2_DBGWCR3_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
4:3 (R/W)	LSC	LSC.. Load/store control. This field enables watchpoint matching on the type of access being made. Possible values of this field are: 01 Match instructions that load from a watchpointed address. 10 Match instructions that store to a watchpointed address. 11 Match instructions that load from or store to a watchpointed address. All other values are reserved, but must behave as if the watchpoint is disabled. Software must not rely on this property as the behavior of reserved values might change in a future revision of the architecture.	
		1	Match instructions that load from a watchpointed address.
		2	Match instructions that store to a watchpointed address.
		3	Match instructions that load from or store to a watchpointed address.
2:1 (R/W)	PAC	PAC.. Privilege of access control. Determines the Exception level or levels at which a Watchpoint debug event for watchpoint n is generated. This field must be interpreted along with the SSC and HMC fields.	
0 (R/W)	E	E.. Enable watchpoint n. Possible values are: 0 Watchpoint disabled. 1 Watchpoint enabled.	
		0	Watchpoint disabled.
		1	Watchpoint enabled.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR0_EL1.

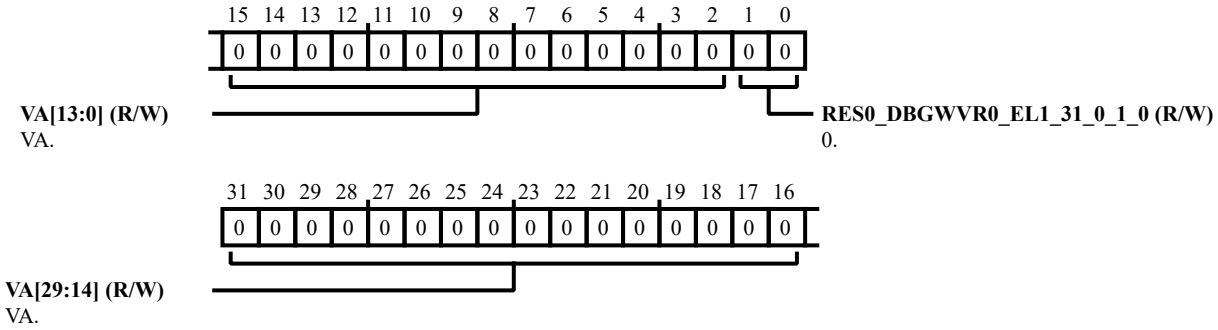

Figure 48-822: A55_C2_DBGWVR0_EL1_31_0 Register Diagram

Table 48-830: A55_C2_DBGWVR0_EL1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.
1:0 (R/W)	RES0_DBGWVR0_EL1_31_0_1_0	0.. Reserved, RES0.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR0_EL1.

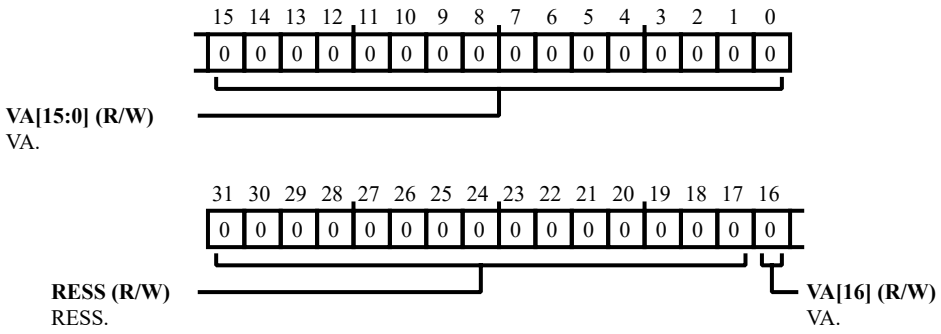

Figure 48-823: A55_C2_DBGWVR0_EL1_63_32 Register Diagram

Table 48-831: A55_C2_DBGWVR0_EL1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:17 (R/W)	RESS	RESS.. Reserved, Sign extended. Hardware and software must treat this field as RES0 if bit[48] is 0 or RES0, and as RES1 if bit[48] is 1. Hardware always ignores the value of these bits and it is IMPLEMENTATION DEFINED whether: The bits are hardwired to a copy of bit [48], meaning writes to these bits are ignored, and reads to the bits always return the hardwired value. The value in those bits can be written, and reads will return the last value written. The value held in those bits is ignored by hardware.
16:0 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR1_EL1.

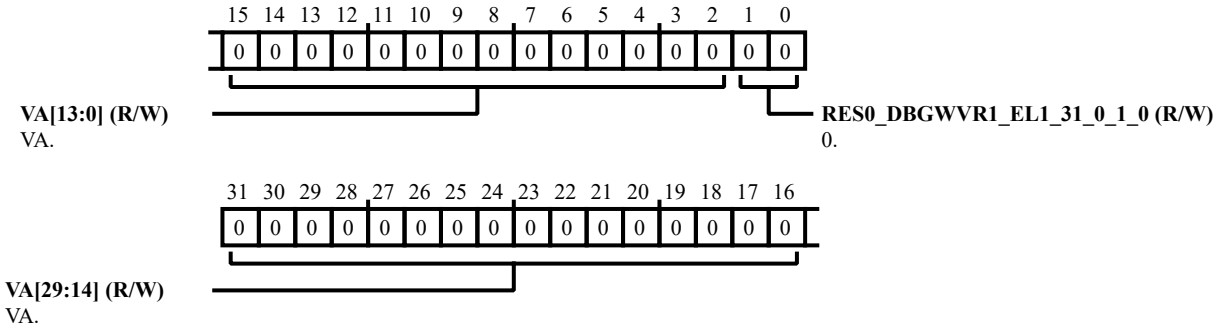

Figure 48-824: A55_C2_DBGWVR1_EL1_31_0 Register Diagram

Table 48-832: A55_C2_DBGWVR1_EL1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.
1:0 (R/W)	RES0_DBGWVR3_EL1_31_0_1_0	0.. Reserved, RES0.

Debug Watchpoint Value Registers.

Holds a data address value for use in watchpoint matching. Forms watchpoint n together with control register DBGWCR3_EL1.

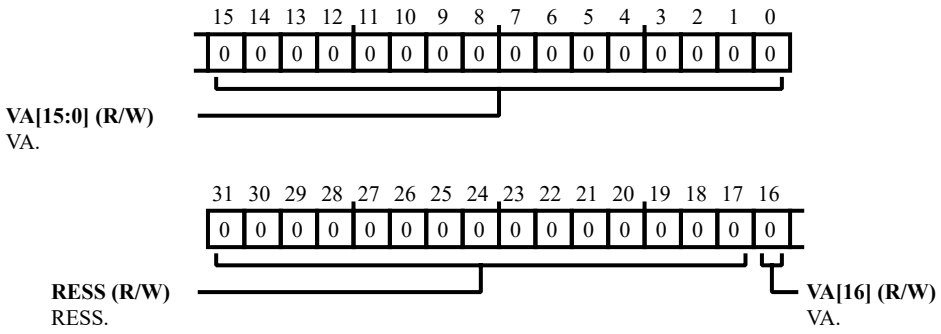

Figure 48-829: A55_C2_DBGWVR3_EL1_63_32 Register Diagram

Table 48-837: A55_C2_DBGWVR3_EL1_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:17 (R/W)	RESS	RESS.. Reserved, Sign extended. Hardware and software must treat this field as RES0 if bit[48] is 0 or RES0, and as RES1 if bit[48] is 1. Hardware always ignores the value of these bits and it is IMPLEMENTATION DEFINED whether: The bits are hardwired to a copy of bit [48], meaning writes to these bits are ignored, and reads to the bits always return the hardwired value. The value in those bits can be written, and reads will return the last value written. The value held in those bits is ignored by hardware.
16:0 (R/W)	VA	VA.. Bits[48:2] of the address value for comparison. ARM deprecates setting DBGWVR<n>_EL1[2] == 1.

External Debug Context ID Sample Register.

Contains the sampled value of the Context ID, captured on reading the low half of EDPCSR.

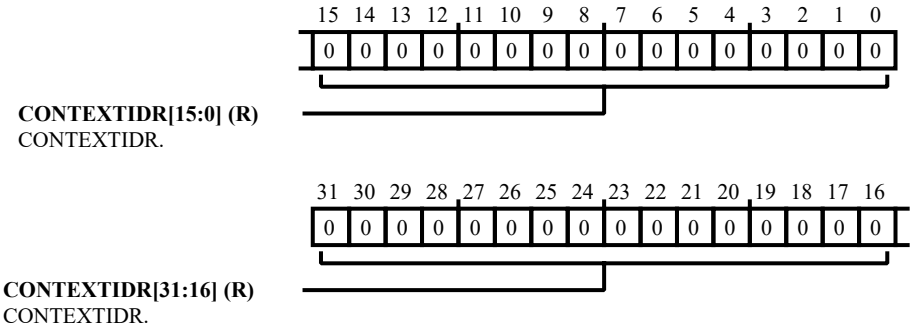

Figure 48-830: A55_C2_EDCIDSR Register Diagram

Table 48-838: A55_C2_EDCIDSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/NW)	CONTEXTIDR	CONTEXTIDR.. The sampled value of the Context ID, captured on reading the low half of EDPCSR. If EL1 is using AArch64, the Context ID is held in CONTEXTIDR_EL1. If EL1 is using AArch32, the Context ID is held in CONTEXTIDR. If EL3 is implemented and is using AArch32 then CONTEXTIDR is a Banked register, and EDCIDSR samples the current Banked copy of CONTEXTIDR.

External Debug Exception Catch Control Register.

Controls Exception Catch debug events.

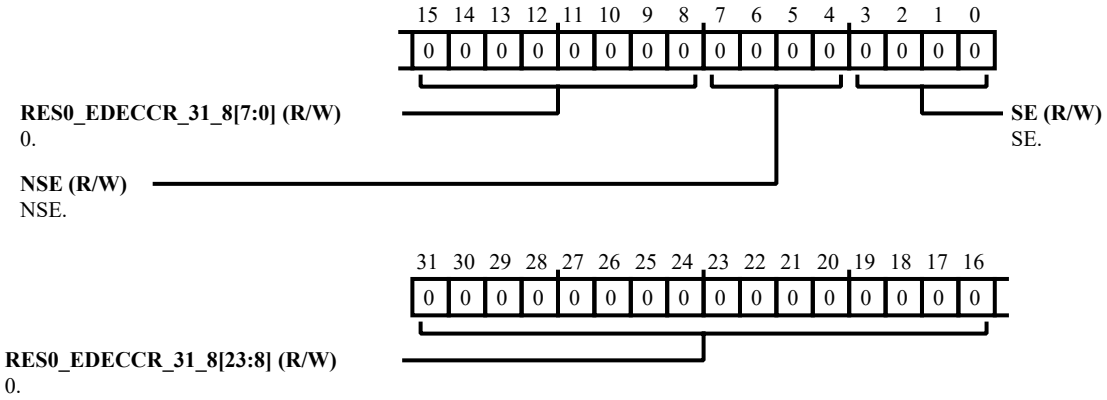

Figure 48-831: A55_C2_EDECCR Register Diagram

Table 48-839: A55_C2_EDECCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:8 (R/W)	RES0_EDECCR_31_8	0.. Reserved, RES0.	
7:4 (R/W)	NSE	NSE.. Coarse-grained Non-secure exception catch. If EL3 and EL2 are not implemented and the PE behaves as if SCR_EL3.NS is set to 0, this field is reserved, RES0. Otherwise, possible values for this field are: 0000 Exception Catch debug event disabled for Non-secure Exception levels. 0010 Exception Catch debug event enabled for Non-secure EL1. 0100 Exception Catch debug event enabled for Non-secure EL2. 0110 Exception Catch debug event enabled for Non-secure EL1 and EL2. All other values are reserved. A value that enables an Exception Catch debug event for an Exception level that is not implemented is reserved. If this field is programmed with a reserved value then: The PE behaves as if it is programmed with a defined value, other than for a read of EDECCR. The value returned for NSE by a read of EDECCR is UNKNOWN.	
		0	Exception Catch debug event disabled for Non-secure Exception levels.
		2	Exception Catch debug event enabled for Non-secure EL1.
		4	Exception Catch debug event enabled for Non-secure EL2.
		6	Exception Catch debug event enabled for Non-secure EL1 and EL2.

Table 48-839: A55_C2_EDECCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	SE	SE.. Coarse-grained Secure exception catch. If EL3 is not implemented and the PE behaves as if SCR_EL3.NS is set to 1, this field is reserved, RES0. Otherwise, possible values for this field are: 0000 Exception Catch debug event disabled for Secure Exception levels. 0010 Exception Catch debug event enabled for Secure EL1. 1000 Exception Catch debug event enabled for Secure EL3. 1010 Exception Catch debug event enabled for Secure EL1 and EL3. All other values are reserved. A value that enables an Exception Catch debug event for an Exception level that is not implemented is reserved. If this field is programmed with a reserved value then: The PE behaves as if it is programmed with a defined value, other than for a read of EDECCR. The value returned for SE by a read of EDECCR is UNKNOWN.	
		0	Exception Catch debug event disabled for Secure Exception levels.
		2	Exception Catch debug event enabled for Secure EL1.
		8	Exception Catch debug event enabled for Secure EL3.
		10	Exception Catch debug event enabled for Secure EL1 and EL3.

External Debug Event Status Register.

Indicates the status of internally pending Halting debug events.

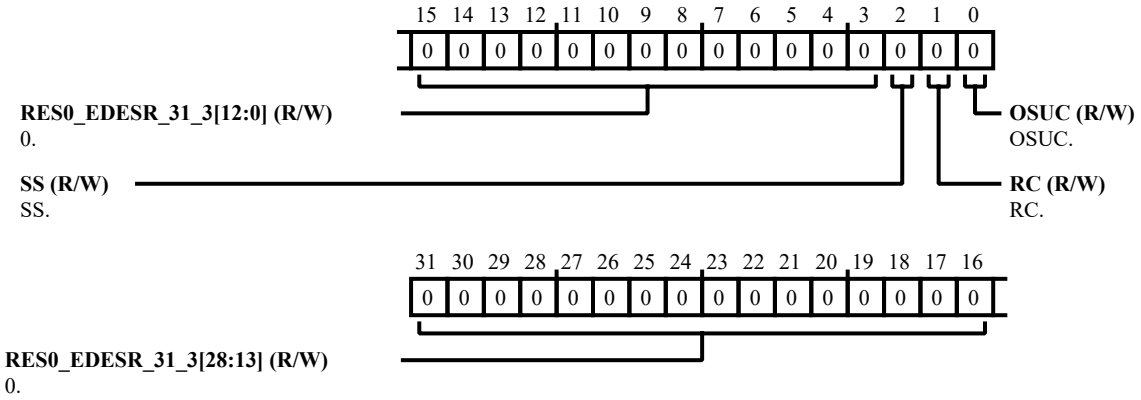

Figure 48-832: A55_C2_EDESR Register Diagram

Table 48-840: A55_C2_EDESR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:3 (R/W)	RES0_EDESR_31_3	0.. Reserved, RES0.	
2 (R/W)	SS	SS.. Halting step debug event pending. Possible values of this field are: 0 Reading this means that a Halting step debug event is not pending. Writing this means no action. 1 Reading this means that a Halting step debug event is pending. Writing this clears the pending Halting step debug event.	
		0	Reading this means that a Halting step debug event is not pending. Writing this means no action.
		1	Reading this means that a Halting step debug event is pending. Writing this clears the pending Halting step debug event.
1 (R/W)	RC	RC.. Reset Catch debug event pending. Possible values of this field are: 0 Reading this means that a Reset Catch debug event is not pending. Writing this means no action. 1 Reading this means that a Reset Catch debug event is pending. Writing this clears the pending Reset Catch debug event.	
		0	Reading this means that a Reset Catch debug event is not pending. Writing this means no action.
		1	Reading this means that a Reset Catch debug event is pending. Writing this clears the pending Reset Catch debug event.

Table 48-840: A55_C2_EDESR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	OSUC	OSUC.. OS Unlock Catch debug event pending. Possible values of this field are: 0 Reading this means that an OS Unlock Catch debug event is not pending. Writing this means no action. 1 Reading this means that an OS Unlock Catch debug event is pending. Writing this clears the pending OS Unlock Catch debug event.	
		0	Reading this means that an OS Unlock Catch debug event is not pending. Writing this means no action.
		1	Reading this means that an OS Unlock Catch debug event is pending. Writing this clears the pending OS Unlock Catch debug event.

External Debug Integration mode Control register.

Enables the external debug to switch from its default mode into integration mode, where test software can control directly the inputs and outputs of the PE, for integration testing or topology detection.

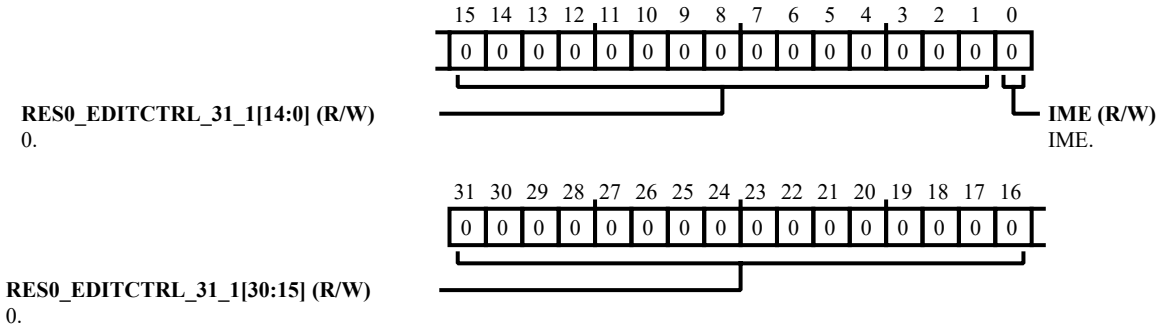

Figure 48-833: A55_C2_EDITCTRL Register Diagram

Table 48-841: A55_C2_EDITCTRL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_EDITCTRL_31_1	0.. Reserved, RES0.	
0 (R/W)	IME	IME.. Integration mode enable. When IME == 1, the device reverts to an integration mode to enable integration testing or topology detection. The integration mode behavior is IMPLEMENTATION DEFINED. 0 Normal operation. 1 Integration mode enabled.	
		0	Normal operation.
		1	Integration mode enabled.

External Debug Instruction Transfer Register.

Used in Debug state for passing instructions to the PE for execution.

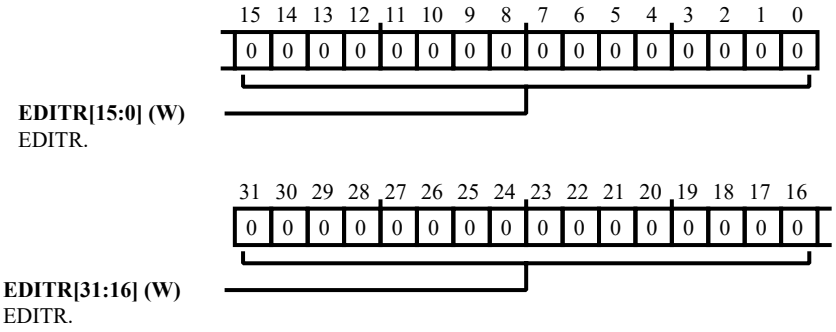

Figure 48-834: A55_C2_EDITR Register Diagram

Table 48-842: A55_C2_EDITR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (RX/W)	EDITR	EDITR.. Used in Debug state for passing instructions to the processor for execution.

External Debug Power/Reset Control Register.

Controls the PE functionality related to powerup, reset, and powerdown.

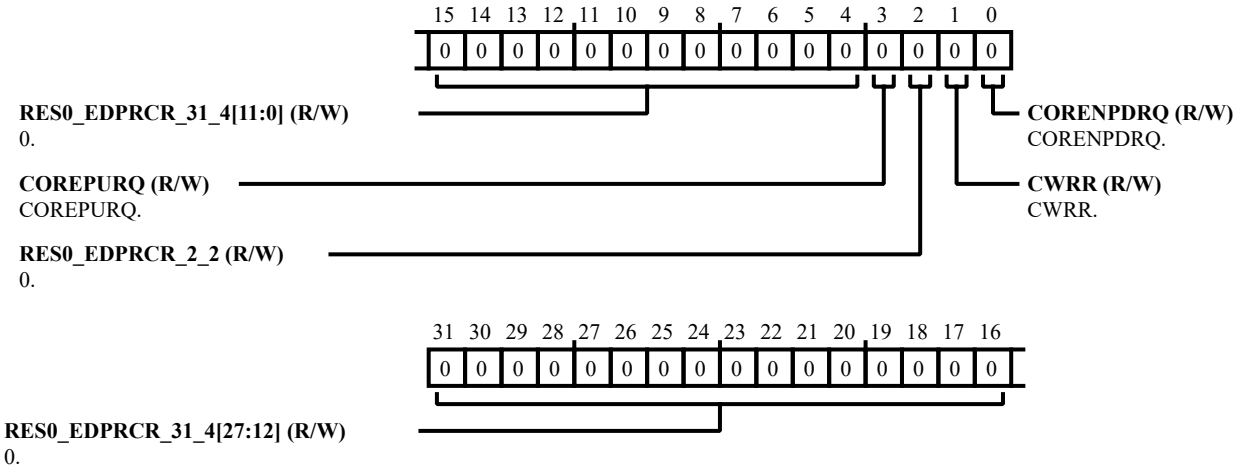

Figure 48-835: A55_C2_EDPRCR Register Diagram

Table 48-843: A55_C2_EDPRCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/W)	RES0_EDPRCR_31_4	0.. Reserved, RES0.	
3 (R/W)	COREPURQ	COREPURQ.. Core powerup request. Allows a debugger to request that the power controller power up the core, enabling access to the debug register in the Core power domain. The actions on writing to this bit are: 0 Do not request power up of the Core power domain. 1 Request power up of the Core power domain, and emulation of powerdown. In an implementation that includes the recommended external debug interface, this bit drives the DBGPWRUPREQ signal. Typically, this request is passed to an external power controller. This means that whether a request causes power up is dependent on the IMPLEMENTATION DEFINED nature of the system. This field is in the Debug power domain and can be read and written when the Core power domain is powered off. On an External debug reset this field resets to 0. The power controller must not allow the Core power domain to switch off while this bit is one.	
		0	Do not request power up of the Core power domain.
		1	Request power up of the Core power domain, and emulation of powerdown.
2 (R/W)	RES0_EDPRCR_2_2	0.. Reserved, RES0.	

Table 48-843: A55_C2_EDPRCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/W)	CWRR	CWRR.. Warm reset request. Write only bit that reads as zero. The actions on writing to this bit are: 0 No action. 1 Request Warm reset. The PE ignores writes to this bit if any of the following are true: ExternalInvasiveDebugEnabled() == FALSE, EL3 is not implemented, and the implemented Security state is Non-Secure state. External-SecureInvasiveDebugEnabled() == FALSE and one of the following is true:EL3 is implemented.The implemented Security state is Secure state. The Core power domain is either off or in a low-power state where the Core power domain registers cannot be accessed. DoubleLockStatus() == TRUE (OS Double Lock is set). OSLSR.OSLK == 1 (OS lock is locked). In an implementation that includes the recommended external debug interface, this bit drives the DBGRSTREQ signal. Whether a write to this bit initiates a Warm Reset, the extent of the reset is IMPLEMENTATION DEFINED, but must be one of: The request is ignored. Only this PE is Warm reset. This PE and other components of the system, possibly including other PEs, are Warm reset. Although the ARM architecture permits the first option from the above list, ARM recommends that either of the other options is implemented.	
		0	No action.
		1	Request Warm reset.
0 (R/W)	CORENPDRQ	CORENPDRQ.. Core no powerdown request. Requests emulation of powerdown. Possible values of this bit are: 0 If the system responds to a powerdown request, it powers down Core power domain. 1 If the system responds to a powerdown request, it does not powerdown the Core power domain, but instead emulates a powerdown of that domain. This bit is UNKNOWN, and the PE ignores writes to this bit if any of the following are true: The Core power domain is either off or in a low-power state where the Core power domain registers cannot be accessed. DoubleLockStatus() == TRUE (OS Double Lock is set). OSLSR.OSLK == 1 (OS lock is locked).	
		0	If the system responds to a powerdown request, it powers down Core power domain.
		1	If the system responds to a powerdown request, it does not powerdown the Core power domain, but instead emulates a powerdown of that domain.

External Debug Processor Status Register.

Holds information about the reset and powerdown state of the PE.

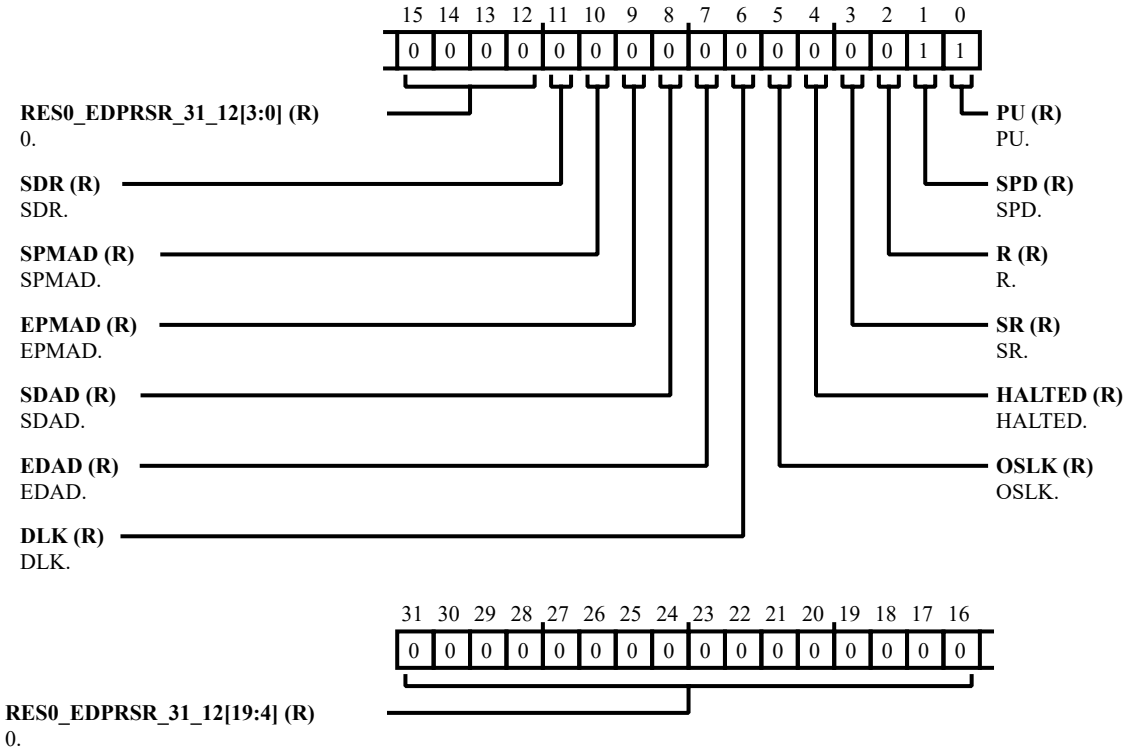

Figure 48-836: A55_C2_EDPRSR Register Diagram

Table 48-844: A55_C2_EDPRSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:12 (R/NW)	RES0_EDPRSR_31_12	0.. Reserved, RES0.

Table 48-844: A55_C2_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
11 (R/NW)	SDR	SDR.. Sticky debug restart. Set to 1 when the PE exits Debug state. This bit is UNKNOWN on reads if any of the following are true: DoubleLockStatus() == TRUE (EDPRSR.DLK == 1). The OS double-lock is locked. EDPRSR.R == 1. The PE is in Reset state. EDPRSR.PU == 0. The Core power domain is powered down. Otherwise permitted values are: 0 The PE has not restarted since EDPRSR was last read. 1 The PE has restarted since EDPRSR was last read. If a reset occurs when the PE is in Debug state, the PE exits Debug state. SDR is UNKNOWN on Warm reset, meaning a debugger must also use the SR bit to determine whether the PE has left Debug state. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs.	
		0	The PE has not restarted since EDPRSR was last read.
		1	The PE has restarted since EDPRSR was last read.
10 (R/NW)	SPMAD	SPMAD.. Sticky EPMAD error. Set to 1 if an external debug interface access to a Performance Monitors register returns an error because AllowExternalPMUAccess() == FALSE. This bit is UNKNOWN on reads if any of the following are true: EDPRSR.{DLK, OSLK, R} is 1. EDPRSR.PU is 0. Otherwise permitted values are: 0 No accesses to the external Performance Monitors registers have failed since EDPRSR was last read. 1 At least one access to the external Performance Monitors registers has failed since EDPRSR was last read. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs. The write to SPMAD is an indirect write to EDPRSR that is a side effect of the access. The indirect write might not occur for a memory-mapped access to the external debug interface.	
		0	No accesses to the external Performance Monitors registers have failed since EDPRSR was last read.
		1	At least one access to the external Performance Monitors registers has failed since EDPRSR was last read.

Table 48-844: A55_C2_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
9 (R/NW)	EPMAD	EPMAD.. External Performance Monitors access disable status. This bit is UNKNOWN on reads if any of EDPRSR.{DLK, OSLK, R} is 1, or EDPRSR.PU is 0. Otherwise permitted values are: 0 External Performance Monitors access enabled. AllowExternalPMUAccess() == TRUE. 1 External Performance Monitors access disabled. AllowExternalPMUAccess() == FALSE. If external performance monitors access is not implemented, EPMAD is RAO.	
		0	External Performance Monitors access enabled. AllowExternalPMUAccess() == TRUE.
		1	External Performance Monitors access disabled. AllowExternalPMUAccess() == FALSE.
8 (R/NW)	SDAD	SDAD.. Sticky EDAD error. Set to 1 if an external debug interface access to a debug register returns an error because AllowExternalDebugAccess() == FALSE. This bit is UNKNOWN on reads if any of the following are true: Either of EDPRSR.{DLK, R} is 1. EDPRSR.PU is 0. EDPRSR.OSLK is 1 and external debug writes to OSLAR_EL1 do not return an error when AllowExternalDebugAccess() == FALSE. Otherwise permitted values are: 0 No accesses to the external debug registers have failed since EDPRSR was last read. 1 At least one access to the external debug registers has failed since EDPRSR was last read. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs. The write to SDAD is an indirect write to EDPRSR that is a side effect of the access. The indirect write might not occur for a memory-mapped access to the external debug interface.	
		0	No accesses to the external debug registers have failed since EDPRSR was last read.
		1	At least one access to the external debug registers has failed since EDPRSR was last read.
7 (R/NW)	EDAD	EDAD.. External debug access disable status. This bit is UNKNOWN on reads if any of the following are true: Either of EDPRSR.{DLK, R} is 1. EDPRSR.PU is 0. EDPRSR.OSLK is 1 and external debug writes to OSLAR_EL1 do not return an error when AllowExternalDebugAccess() == FALSE. Otherwise permitted values are: 0 External debug access enabled. AllowExternalDebugAccess() == TRUE. 1 External debug access disabled. AllowExternalDebugAccess() == FALSE.	
		0	External debug access enabled. AllowExternalDebugAccess() == TRUE.
		1	External debug access disabled. AllowExternalDebugAccess() == FALSE.

Table 48-844: A55_C2_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
6 (R/NW)	DLK	DLK.. OS Double Lock status bit. Returns the result of the pseudocode function DoubleLockStatus(). This bit is UNKNOWN on reads if EDPRSR.PU is 0. Otherwise reads as zero if any of the following are true, that is when DoubleLockStatus() == FALSE: OSDLR_EL1.DLK == 0. DBGPRCR_EL1.CORENPDRQ == 1. The PE is in Debug state. If the Core power domain is powered up and DoubleLockStatus() == TRUE, it is IMPLEMENTATION DEFINED whether: EDPRSR.PU reads as 1, EDPRSR.DLK reads as 1, and EDPRSR.SPD is UNKNOWN. EDPRSR.PU reads as 0, EDPRSR.DLK is UNKNOWN, and EDPRSR.SPD reads as 0. If the Core power domain is powered up and entered reset state with the OS double-lock locked this bit has a CONSTRAINED UNPREDICTABLE value, for more information see EDPRSR.{DLK, SPD, PU} describe whether registers in the Core power domain can be accessed, and whether their state has been lost since the last time the register was read. For more information, see.	
5 (R/NW)	OSLK	OSLK.. OS lock status bit. This bit is UNKNOWN on reads if either of EDPRSR.{DLK, R} is 1 or EDPRSR.PU is 0. A read of this bit returns the value of OSLSR_EL1.OSLK.	
4 (R/NW)	HALTED	HALTED.. Halted status bit. This bit is UNKNOWN on reads if EDPRSR.PU is 0. Otherwise permitted values are: 0 PE in Non-debug state. 1 PE is in Debug state. Because the OS Double Lock is never set when the PE is in Debug state, this bit is always RAZ when EDPRSR.DLK is set to 1.	
		0	PE in Non-debug state.
		1	PE is in Debug state.
3 (R/NW)	SR	SR.. Sticky core reset status bit. This bit is UNKNOWN on reads if EDPRSR.DLK is 1 or EDPRSR.PU is 0. Otherwise permitted values are: 0 The non-debug logic of the PE is not in reset state and has not been reset since the last time EDPRSR was read. 1 The non-debug logic of the PE is in reset state or has been reset since the last time EDPRSR was read. If DoubleLockStatus() == FALSE then following a read of EDPRSR, this bit clears to 0 if the non-debug logic of the PE is not in reset state. Otherwise it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs.	
		0	The non-debug logic of the PE is not in reset state and has not been reset since the last time EDPRSR was read.
		1	The non-debug logic of the PE is in reset state or has been reset since the last time EDPRSR was read.

Table 48-844: A55_C2_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/NW)	R	R.. PE reset status bit. This bit is UNKNOWN on reads if either EDPRSR.DLK is 1 or EDPRSR.PU is 0. Otherwise permitted values are: 0 The non-debug logic of the PE is not in reset state. 1 The non-debug logic of the PE is in reset state. If the Core power domain is powered up and entered reset state with the OS double-lock locked this bit has a CONSTRAINED UNPREDICTABLE value, for more information see.	
		0	The non-debug logic of the PE is not in reset state.
		1	The non-debug logic of the PE is in reset state.
1 (R/NW)	SPD	SPD.. Sticky core powerdown status bit. This bit is UNKNOWN on reads if both EDPRSR.DLK and EDPRSR.PU are 1. Otherwise, permitted values are: 0 If EDPRSR.PU is 0, the debugger does not know whether the state of the debug registers in the Core power domain is lost. If the Core power domain is in a powerup state (EDPRSR.PU is 1), the state of the debug registers in the Core power domain has not been lost. 1 The EDPRSR.PU is 1, the state of the debug registers in the Core power domain has been lost. If DoubleLockStatus() == FALSE and the PE is not in the powerdown state, then following a read of EDPRSR, this bit clears to 0. If DoubleLockStatus() == TRUE and the PE is not in the powerdown state, it is CONSTRAINED UNPREDICTABLE whether or not this clearing occurs. When the value of EDPRSR.PU is 0 indicating that the Core power domain is in either retention or powerdown state, EDPRSR.SPD is not cleared following a read of EDPRSR, for the IMPLEMENTATION DEFINED behavior see EDPRSR.{DLK, SPD, PU} describe whether registers in the Core power domain can be accessed, and whether their state has been lost since the last time the register was read. For more information, see.	
		0	If EDPRSR.PU is 0, the debugger does not know whether the state of the debug registers in the Core power domain is lost. If the Core power domain is in a powerup state (EDPRSR.PU is 1), the state of the debug registers in the Core power domain has not been lost.
		1	The EDPRSR.PU is 1, the state of the debug registers in the Core power domain has been lost.

Table 48-844: A55_C2_EDPRSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/NW)	PU	PU.. Core powerup status bit. Indicates whether the Core power domain debug registers can be accessed. The value of EDPRSR.PU is IMPLEMENTATION DEFINED when the Core power domain is powered-up and OS double-lock is locked. See the description of DLK for more information. Otherwise, permitted values are: 0 Core is in a low-power or powerdown state where the debug registers cannot be accessed. 1 Core is in a powerup state where the debug registers can be accessed. If the Core power domain is powered up and entered reset state with the OS double-lock locked this bit has a CONSTRAINED UNPREDICTABLE value, for more information see EDPRSR.{DLK, SPD, PU} describe whether registers in the Core power domain can be accessed, and whether their state has been lost since the last time the register was read. For more information, see.	
		0	Core is in a low-power or powerdown state where the debug registers cannot be accessed.
		1	Core is in a powerup state where the debug registers can be accessed.

External Debug Reserve Control Register.

This register is used to allow imprecise entry to Debug state and clear sticky bits in EDSCR.

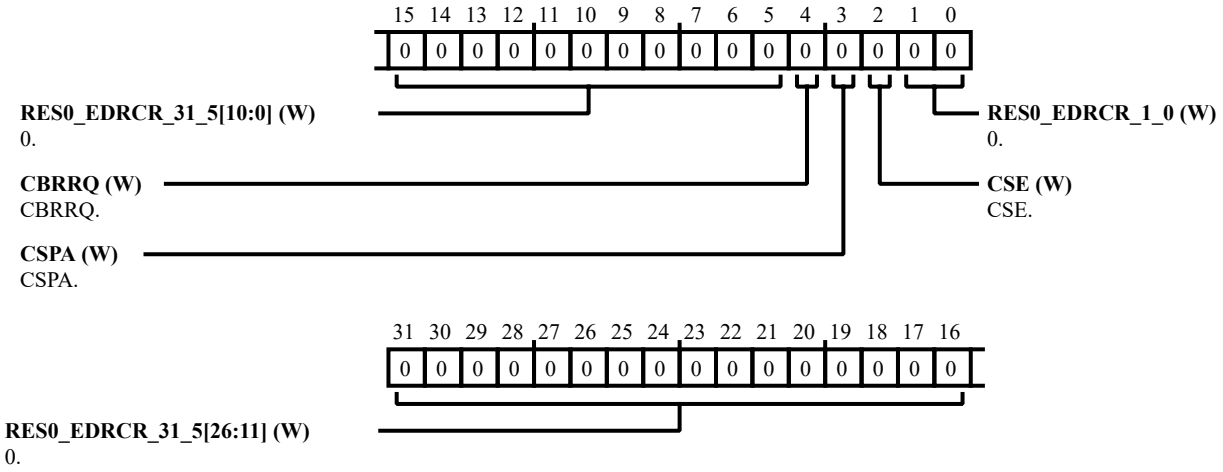

Figure 48-837: A55_C2_EDRCR Register Diagram

Table 48-845: A55_C2_EDRCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:5 (RX/W)	RES0_EDRCR_31_5	0.. Reserved, RES0.	
4 (RX/W)	CBRRQ	CBRRQ.. Allow imprecise entry to Debug state. The actions on writing to this bit are: 0 No action. 1 Allow imprecise entry to Debug state, for example by canceling pending bus accesses. Setting this bit to 1 allows a debugger to request imprecise entry to Debug state. An External Debug Request debug event must be pending before the debugger sets this bit to 1. This feature is optional. If this feature is not implemented, writes to this bit are ignored.	
		0	No action.
		1	Allow imprecise entry to Debug state, for example by canceling pending bus accesses.
3 (RX/W)	CSPA	CSPA.. Clear Sticky Pipeline Advance. This bit is used to clear the EDSCR.PipeAdv bit to 0. The actions on writing to this bit are: 0 No action. 1 Clear the EDSCR.PipeAdv bit to 0.	
		0	No action.
		1	Clear the EDSCR.PipeAdv bit to 0.

Table 48-845: A55_C2_EDRCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (RX/W)	CSE	CSE.. Clear Sticky Error. Used to clear the EDSCR cumulative error bits to 0. The actions on writing to this bit are: 0 No action. 1 Clear the EDSCR.{TXU, RXO, ERR} bits, and, if the PE is in Debug state, the EDSCR.ITO bit, to 0.	
		0	No action.
		1	Clear the EDSCR.{TXU, RXO, ERR} bits, and, if the PE is in Debug state, the EDSCR.ITO bit, to 0.
1:0 (RX/W)	RES0_EDRCR_1_0	0.. Reserved, RES0.	

External Debug Status and Control Register.

Main control register for the debug implementation.

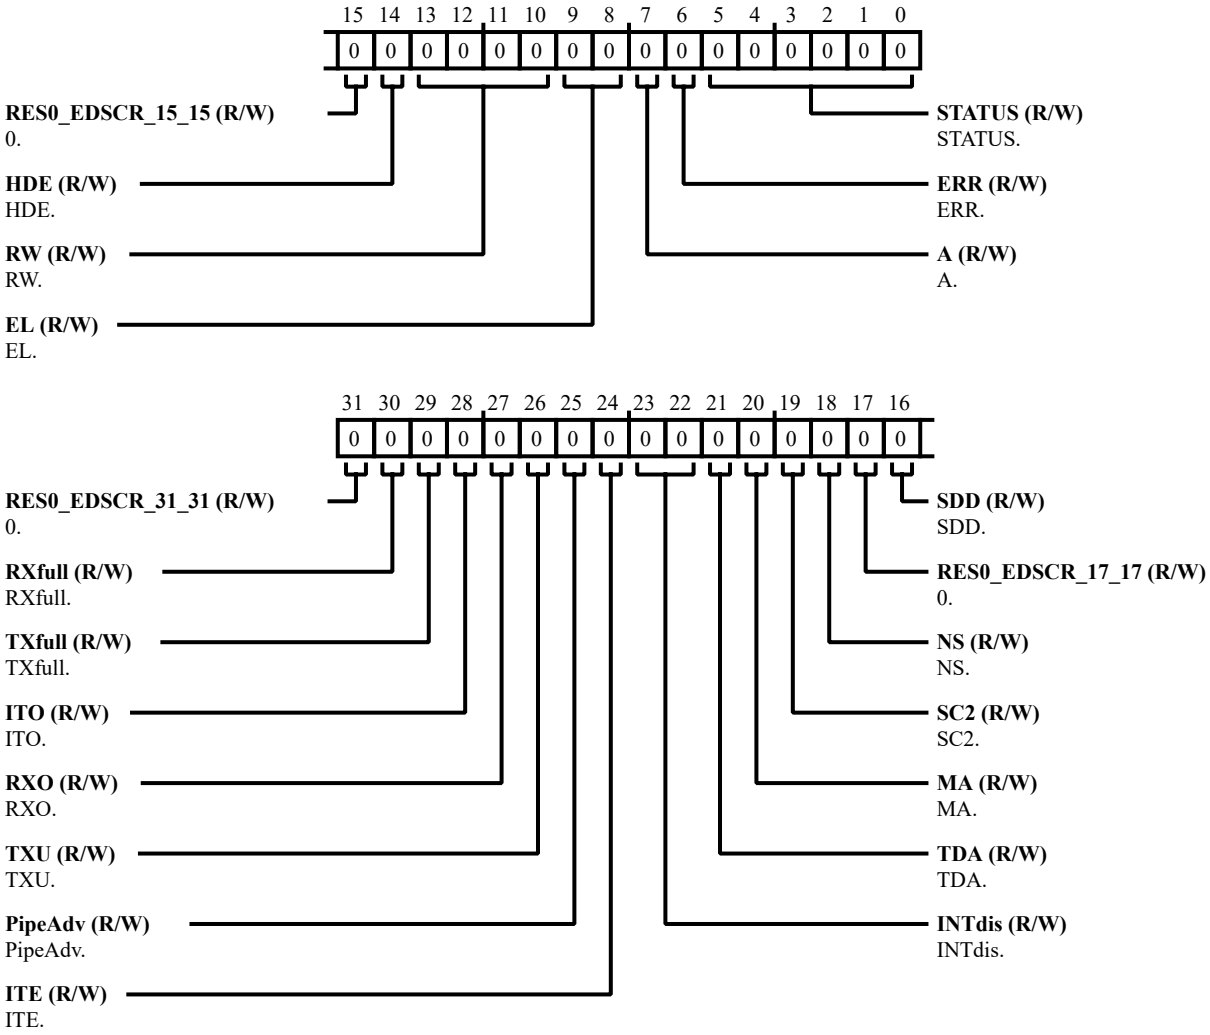

Figure 48-838: A55_C2_EDSCR Register Diagram

Table 48-846: A55_C2_EDSCR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31 (R/W)	RES0_EDSCR_31_31	0.. Reserved, RES0.
30 (R/W)	RXFULL	RXfull.. DTRRX full. This bit is RO.

Table 48-846: A55_C2_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
29 (R/W)	TXFULL	TXfull.. DTRTX full. This bit is RO.
28 (R/W)	ITO	ITO.. ITR overrun. This bit is RO. If the PE is in Non-debug state, this bit is UNKNOWN. ITO is set to 0 on entry to Debug state.
27 (R/W)	RXO	RXO.. DTRRX overrun. This bit is RO.
26 (R/W)	TXU	TXU.. DTRTX underrun. This bit is RO.
25 (R/W)	PIPEADV	PipeAdv.. Pipeline advance. This bit is RO. Set to 1 every time the PE pipeline retires one or more instructions. Cleared to 0 by a write to EDRCR.CSPA. The architecture does not define precisely when this bit is set to 1. It requires only that this happen periodically in Non-debug state to indicate that software execution is progressing.
24 (R/W)	ITE	ITE.. ITR empty. This bit is RO. If the PE is in Non-debug state, this bit is UNKNOWN. It is always valid in Debug state.

Table 48-846: A55_C2_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:22 (R/W)	INTDIS	INTdis.. Interrupt disable. Disables taking interrupts (including virtual interrupts and System Error interrupts) in Non-Debug state. If external invasive debug is disabled, the value of this field is ignored. If external invasive debug is enabled, the possible values of this field are: 00 Do not disable interrupts. 01 Disable interrupts taken to Non-secure EL1. 10 Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable interrupts taken to Secure EL1. 11 Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable all other interrupts. The value of INTdis does not affect whether an interrupt is a WFI wake-up event, but can mask an interrupt as a WFE wake-up event. If EL3 and EL2 are not implemented, the values 0b01 and 0b10 are reserved. If programmed with a reserved value the PE behaves as if INTdis has been programmed with a defined value, other than for a direct read of EDSCR, and the value returned by a read of EDSCR.INTdis is UNKNOWN.	
		0	Do not disable interrupts.
		1	Disable interrupts taken to Non-secure EL1.
		2	Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable interrupts taken to Secure EL1.
		3	Disable interrupts taken only to Non-secure EL1 and Non-secure EL2. If external secure invasive debug is enabled, also disable all other interrupts.
21 (R/W)	TDA	TDA.. Traps accesses to the following Debug System registers: AArch64: DBGBCR<n>_EL1, DBGBVR<n>_EL1, DBGWCR<n>_EL1, DBGWVR<n>_EL1. AArch32: DBGBCR<n>, DBGBVR<n>, DBGBXVR<n>, DBGWCR<n>, DBGWVR<n>. The possible values of this field are: 0 Accesses to Debug System registers do not generate a Software Access debug event. 1 Accesses to Debug System registers generate a Software Access debug event, if OSLSR.OSLK is 0 and if halting is allowed.	
		0	Accesses to Debug System registers do not generate a Software Access debug event.
		1	Accesses to Debug System registers generate a Software Access debug event, if OSLSR.OSLK is 0 and if halting is allowed.

Table 48-846: A55_C2_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	MA	MA.. Memory access mode. Controls use of memory-access mode for accessing ITR and the DCC. This bit is ignored if in Non-debug state and set to zero on entry to Debug state. Possible values of this field are: 0 Normal access mode. 1 Memory access mode.	
		0	Normal access mode.
		1	Memory access mode.
19 (R/W)	SC2	SC2.. Sample CONTEXTIDR_EL2. Controls whether the Sample-based Profiling Extension samples CONTEXTIDR_EL2 or VTTBR_EL2.VMID. 0 Sample VTTBR_EL2.VMID. 1 Sample CONTEXTIDR_EL2.	
		0	Sample VTTBR_EL2.VMID.
		1	Sample CONTEXTIDR_EL2.
18 (R/W)	NS	NS.. Non-secure status. Read-only. When in Debug state, gives the current Security state: 0 Secure state, IsSecure() == TRUE. 1 Non-secure state, IsSecure() == FALSE. In Non-debug state, this bit is UNKNOWN.	
		0	Secure state, IsSecure() == TRUE.
		1	Non-secure state, IsSecure() == FALSE.
17 (R/W)	RES0_EDSCR_17_17	0.. Reserved, RES0.	
16 (R/W)	SDD	SDD.. Secure debug disabled. This bit is RO. On entry to Debug state: If entering in Secure state, SDD is set to 0. If entering in Non-secure state, SDD is set to the inverse of ExternalSecureInvasiveDebugEnabled(). In Debug state, the value of the SDD bit does not change, even if ExternalSecureInvasiveDebugEnabled() changes. In Non-debug state: SDD returns the inverse of ExternalSecureInvasiveDebugEnabled(). If the authentication signals that control ExternalSecureInvasiveDebugEnabled() change, a context synchronization operation is required to guarantee their effect. This bit is unaffected by the Security state of the PE. If EL3 is not implemented and the implementation is Non-secure, this bit is RES1.	
15 (R/W)	RES0_EDSCR_15_15	0.. Reserved, RES0.	

Table 48-846: A55_C2_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
14 (R/W)	HDE	HDE.. Halting debug enable. The possible values of this field are: 0 Halting disabled for Breakpoint, Watchpoint and Halt Instruction debug events. 1 Halting enabled for Breakpoint, Watchpoint and Halt Instruction debug events.	
		0	Halting disabled for Breakpoint, Watchpoint and Halt Instruction debug events.
		1	Halting enabled for Breakpoint, Watchpoint and Halt Instruction debug events.
13:10 (R/W)	RW	RW.. Exception level Execution state status. Read-only. In Debug state, each bit gives the current Execution state of each EL: RW Meaning 1111 All Exception levels are using AArch64. 1110 EL0 is using AArch32. All other Exception levels are using AArch64. 110x EL0 and EL1 are using AArch32. All other Exception levels are using AArch64. Never seen if EL2 is not implemented in the current Security state. 10xx EL0, EL1, and, if implemented in the current Security state, EL2 are using AArch32. All other Exception levels are using AArch64. 0xxx All Exception levels are using AArch32. However: The value of 1110 is only permitted at EL0. The values 110x are not permitted if either:EL2 is not implemented.EL3 is implemented and SCR_EL3.NS/ SCR.NS == 0. The values 10xx are not permitted if EL3 is not implemented. In Non-debug state, this field is RAO.	
9:8 (R/W)	EL	EL.. Exception level. Read-only. In Debug state, this gives the current EL of the PE. In Non-debug state, this field is RAZ.	
7 (R/W)	A	A.. System Error interrupt pending. Read-only. In Debug state, indicates whether a SError interrupt is pending: If HCR_EL2.{AMO, TGE} = {1, 0} and in Non-secure EL0 or EL1, a virtual SError interrupt. Otherwise, a physical SError interrupt. 0 No SError interrupt pending. 1 SError interrupt pending. A debugger can read EDSCR to check whether an SError interrupt is pending without having to execute further instructions. A pending SError might indicate data from target memory is corrupted. UNKNOWN in Non-debug state.	
		0	No SError interrupt pending.
		1	SError interrupt pending.
6 (R/W)	ERR	ERR.. Cumulative error flag. This field is RO. It is set to 1 following exceptions in Debug state and on any signaled overrun or underrun on the DTR or EDITR.	

Table 48-846: A55_C2_EDSCR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
5:0 (R/W)	STATUS	STATUS.. Debug status flags. This field is RO. The possible values of this field are: 000010 PE is in Non-debug state. 000001 PE is restarting, exiting Debug state. 000111 Breakpoint. 010011 External debug request. 011011 Halting step, normal. 011111 Halting step, exclusive. 100011 OS Unlock Catch. 100111 Reset Catch. 101011 Watchpoint. 101111 HLT instruction. 110011 Software access to debug register. 110111 Exception Catch. 111011 Halting step, no syndrome. All other values of STATUS are reserved.	
		1	PE is restarting, exiting Debug state.
		2	PE is in Non-debug state.
		7	Breakpoint.
		19	External debug request.
		27	Halting step, normal.
		31	Halting step, exclusive.
		35	OS Unlock Catch.
		39	Reset Catch.
		43	Watchpoint.
		47	HLT instruction.
		51	Software access to debug register.
		55	Exception Catch.
		59	Halting step, no syndrome.

External Debug Watchpoint Address Register.

Returns the virtual data address being accessed when a watchpoint debug event was triggered.

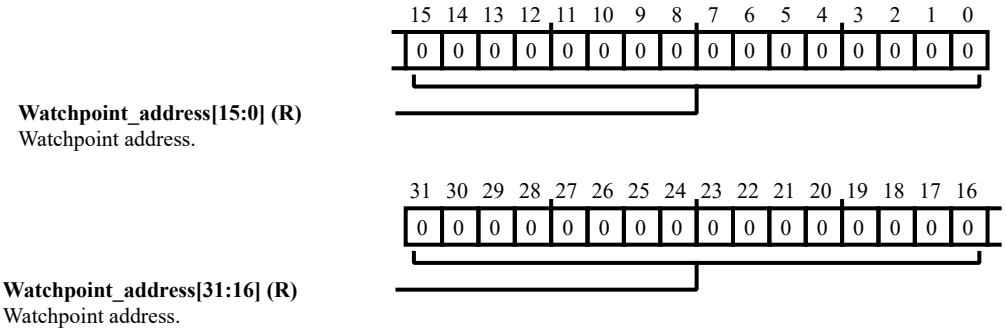

Figure 48-839: A55_C2_EDWAR_31_0 Register Diagram

Table 48-847: A55_C2_EDWAR_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/NW)	WATCHPOINT_ADDRESS	Watchpoint address.. Watchpoint address. The data virtual address being accessed when a watchpoint debug event was triggered and caused entry to Debug state. This address must be within a naturally-aligned block of memory of power-of-two size no larger than the DC ZVA block size. The value of this register is UNKNOWN if the PE is in Non-debug state, or if Debug state was entered other than for a Watchpoint debug event. The value of EDWAR[63:32] is UNKNOWN if Debug state was entered for a Watchpoint debug event taken from AArch32 state. The EDWAR is subject to the same alignment rules as the reporting of a watchpointed address in the FAR. See.

External Debug Watchpoint Address Register.

Returns the virtual data address being accessed when a watchpoint debug event was triggered.

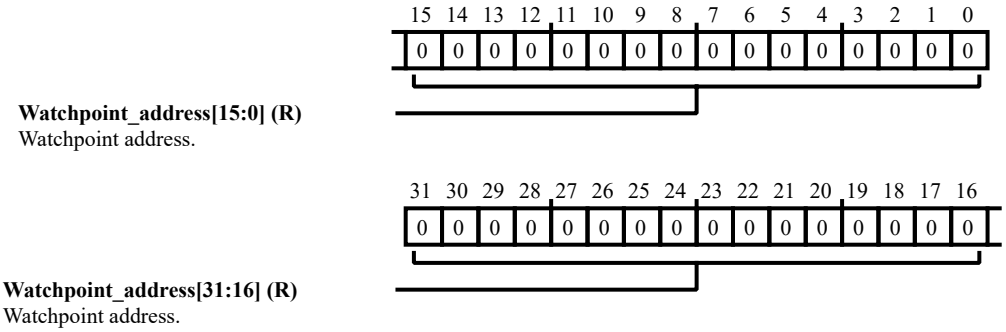

Figure 48-840: A55_C2_EDWAR_63_32 Register Diagram

Table 48-848: A55_C2_EDWAR_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/NW)	WATCHPOINT_ADDRESS	Watchpoint address.. Watchpoint address. The data virtual address being accessed when a watchpoint debug event was triggered and caused entry to Debug state. This address must be within a naturally-aligned block of memory of power-of-two size no larger than the DC ZVA block size. The value of this register is UNKNOWN if the PE is in Non-debug state, or if Debug state was entered other than for a Watchpoint debug event. The value of EDWAR[63:32] is UNKNOWN if Debug state was entered for a Watchpoint debug event taken from AArch32 state. The EDWAR is subject to the same alignment rules as the reporting of a watchpointed address in the FAR. See.

OS Lock Access Register.

Used to lock or unlock the OS lock.

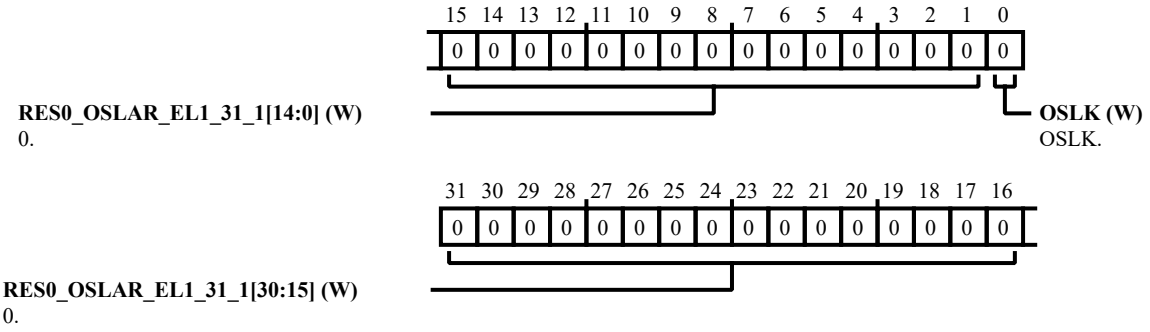

Figure 48-841: A55_C2_OSLAR_EL1 Register Diagram

Table 48-849: A55_C2_OSLAR_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:1 (RX/W)	RES0_OSLAR_EL1_31_1	0.. Reserved, RES0.
0 (RX/W)	OSLK	OSLK.. On writes to OSLAR_EL1, bit[0] is copied to the OS lock. Use EDPRSR.OSLK to check the current status of the lock.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

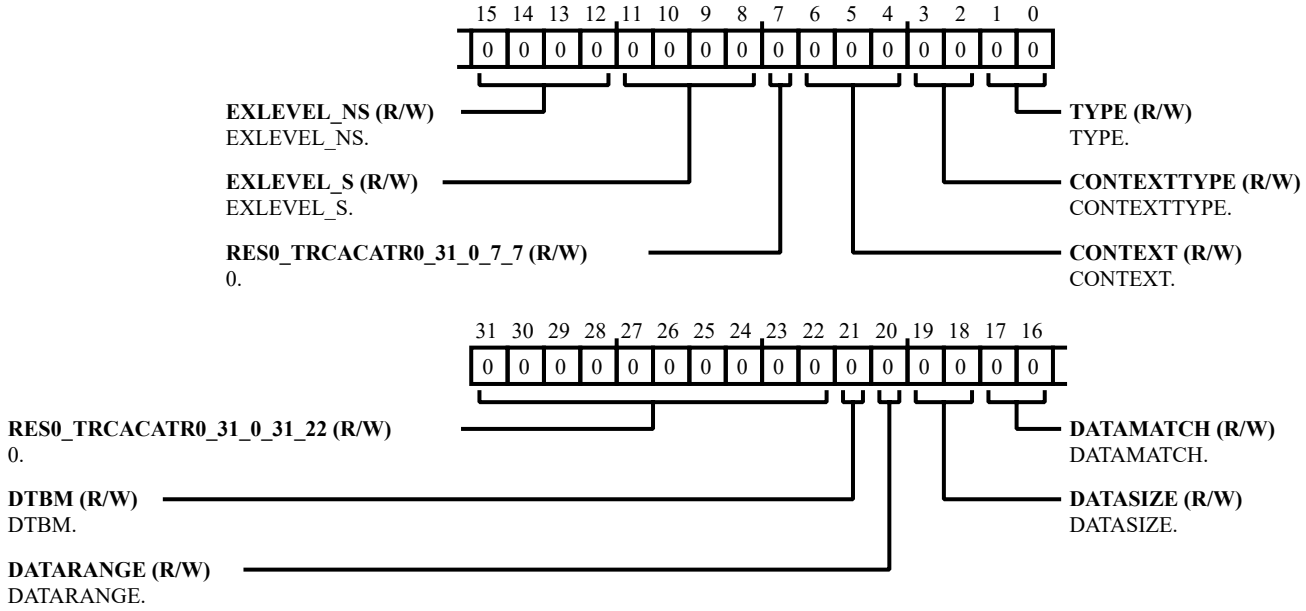

Figure 48-842: A55_C2_TRCACATR0_31_0 Register Diagram

Table 48-850: A55_C2_TRCACATR0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCA-CATR0_31_0_31_22	0.. Reserved, RES0.	
21 (R/W)	DTBM	DTBM.. Controls whether data address comparisons use the data address [63:56] bits: 0 The trace unit ignores the data address [63:56] bits for data address comparisons. 1 The trace unit uses the data address [63:56] bits for data address comparisons. Supported only if TRCIDR2.DASIZE indicates that the data address size is 64 bits, otherwise this bit is RES0.	
		0	The trace unit ignores the data address [63:56] bits for data address comparisons.
		1	The trace unit uses the data address [63:56] bits for data address comparisons.

Table 48-850: A55_C2_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	DATARANGE	DATARANGE.. Controls whether a data value comparison uses the single address comparator or the address range comparator: 0 The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE. 1 The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE. The trace unit ignores this field when DATAMATCH==0b00.Supported only if the corresponding data value comparator is supported, otherwise this bit is RES0.	
		0	The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE.
		1	The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE.
19:18 (R/W)	DATASIZE	DATASIZE.. Controls the width of the data value comparison: 00 Byte. 01 Halfword. 10 Word. 11 Doubleword. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.The doubleword width is supported only if TRCIDR2.DVSIZE indicates that 64-bit values are supported. If 64-bit values are not supported, 0b11 is reserved.	
		0	Byte.
		1	Halfword.
		2	Word.
		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-850: A55_C2_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR0_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-850: A55_C2_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-850: A55_C2_TRCACATR0_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

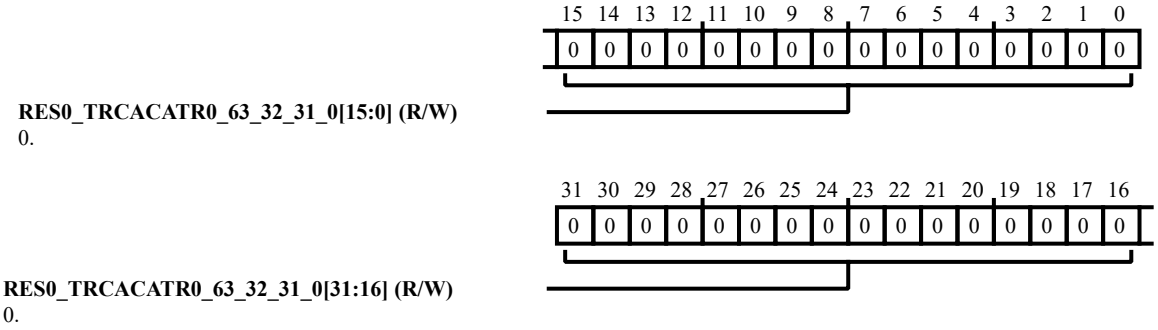

Figure 48-843: A55_C2_TRCACATR0_63_32 Register Diagram

Table 48-851: A55_C2_TRCACATR0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	RES0_TRCA-CATR0_63_32_31_0	0.. Reserved, RES0.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

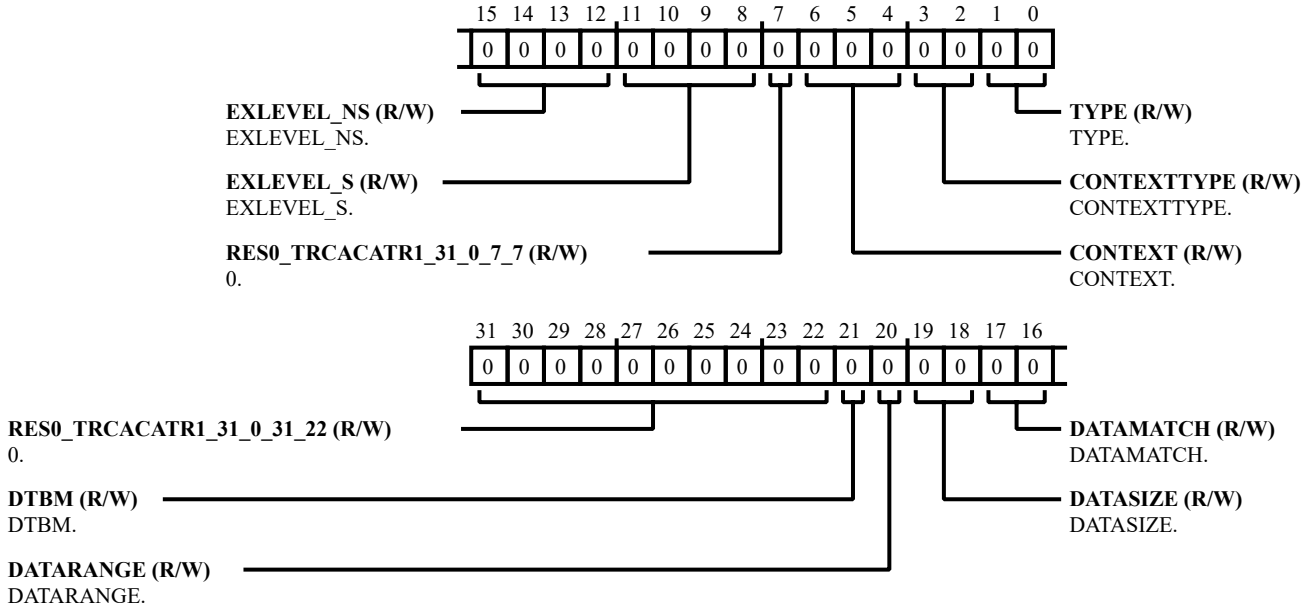

Figure 48-844: A55_C2_TRCACATR1_31_0 Register Diagram

Table 48-852: A55_C2_TRCACATR1_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCA-CATR1_31_0_31_22	0.. Reserved, RES0.	
21 (R/W)	DTBM	DTBM.. Controls whether data address comparisons use the data address [63:56] bits: 0 The trace unit ignores the data address [63:56] bits for data address comparisons. 1 The trace unit uses the data address [63:56] bits for data address comparisons. Supported only if TRCIDR2.DASIZE indicates that the data address size is 64 bits, otherwise this bit is RES0.	
		0	The trace unit ignores the data address [63:56] bits for data address comparisons.
		1	The trace unit uses the data address [63:56] bits for data address comparisons.

Table 48-852: A55_C2_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	DATARANGE	DATARANGE.. Controls whether a data value comparison uses the single address comparator or the address range comparator: 0 The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE. 1 The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE. The trace unit ignores this field when DATAMATCH==0b00.Supported only if the corresponding data value comparator is supported, otherwise this bit is RES0.	
		0	The trace unit uses the single address comparator for data value comparisons. The behavior of the address range comparator is UNPREDICTABLE.
		1	The trace unit uses the address range comparator for data value comparisons. The behavior of the single address comparators in this pair is UNPREDICTABLE.
19:18 (R/W)	DATASIZE	DATASIZE.. Controls the width of the data value comparison: 00 Byte. 01 Halfword. 10 Word. 11 Doubleword. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.The doubleword width is supported only if TRCIDR2.DVSIZE indicates that 64-bit values are supported. If 64-bit values are not supported, 0b11 is reserved.	
		0	Byte.
		1	Halfword.
		2	Word.
		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-852: A55_C2_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR1_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-852: A55_C2_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-852: A55_C2_TRCACATR1_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

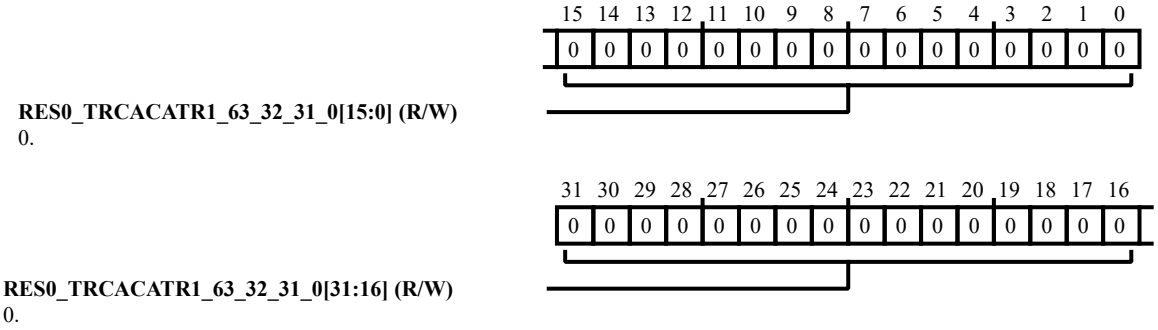

Figure 48-845: A55_C2_TRCACATR1_63_32 Register Diagram

		3	Doubleword.
17:16 (R/W)	DATAMATCH	DATAMATCH.. Controls how the trace unit performs a data value comparison: 00 The trace unit does not perform a data value comparison. 01 The trace unit performs a data value comparison and signals a match if both values are identical. 10 Reserved. 11 The trace unit performs a data value comparison and signals a match if both values are different. Supported only if the corresponding data value comparator is supported, otherwise this field is RES0.	
		0	The trace unit does not perform a data value comparison.
		1	The trace unit performs a data value comparison and signals a match if both values are identical.
		2	Reserved.
		3	The trace unit performs a data value comparison and signals a match if both values are different.

Table 48-858: A55_C2_TRCACATR4_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR4_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-858: A55_C2_TRCACATR4_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-858: A55_C2_TRCACATR4_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

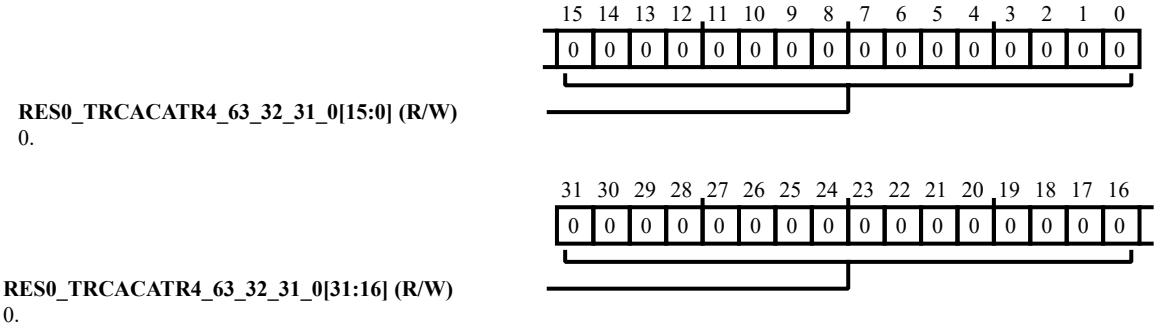

Figure 48-851: A55_C2_TRCACATR4_63_32 Register Diagram

Bit No. (Access)	Bit Name	Description/Enumeration	
15:12 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Non-secure state, for exception level n. 1 The trace unit does not perform a comparison, in Non-secure state, for exception level n. The exception levels are:Bit[12]Exception level 0.Bit[13]Exception level 1.Bit[14]Exception level 2.Bit[15]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Non-secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Non-secure state, for exception level n.
11:8 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether a comparison can occur for the corresponding exception level: 0 The trace unit can perform a comparison, in Secure state, for exception level n. 1 The trace unit does not perform a comparison, in Secure state, for exception level n. The exception levels are:Bit[8]Exception level 0.Bit[9]Exception level 1.Bit[10]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[11]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. Unimplemented bits are RAZ/WI.	
		0	The trace unit can perform a comparison, in Secure state, for exception level n.
		1	The trace unit does not perform a comparison, in Secure state, for exception level n.
7 (R/W)	RES0_TRCACATR7_31_0_7_7	0.. Reserved, RES0.	
6:4 (R/W)	CONTEXT	CONTEXT.. If TRCIDR4.NUMCIDFC > 0 or TRCIDR4.NUMVMIDC > 0, selects a Context ID comparator or VMID comparator: 000 Comparator 0. 001 Comparator 1. 010 Comparator 2. and so on up to 0b111, which indicates comparator 7.The implemented width of this field is determined by the size of whichever of TRCIDR4.NUMVMIDC and TRCIDR4.NUMCIDC is larger. If the largest field is one bit long, then this field implements one bit, bit[4]. If the largest field is four bits long, then this field implements two bits, bits[5:4]. Unimplemented bits within the field are RAZ/WI.If TRCIDR4.NUMCIDFC==0 and TRCIDR4.NUMVMIDC==0, this field is RES0.	
		0	Comparator 0.
		1	Comparator 1.
		2	Comparator 2.

Table 48-864: A55_C2_TRCACATR7_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:2 (R/W)	CONTEXTTYPE	CONTEXTTYPE.. If TRCIDR4.NUMVMIDC>0 and TRCIDR4.NUMCIDC>0, this field controls whether the trace unit performs a Context ID comparison, a virtual machine identifier (VMID) comparison, or both comparisons: 00 The trace unit does not perform a Context ID or VMID comparison. 01 The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match. 10 The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match. 11 The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches. If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUMCIDC>0, bit [3] is RES0 and bit[2] controls whether the trace unit performs a Context ID comparison, as with cases 0b00 and 0b01 above.If TRCIDR4.NUMVMIDC==0 and TRCIDR4.NUM-CIDC==0, both bits are RES0.	
		0	The trace unit does not perform a Context ID or VMID comparison.
		1	The trace unit performs a Context ID comparison using the Context ID comparator that the CONTEXT field specifies, and signals a match if both the Context ID comparator matches and the address comparator match.
		2	The trace unit performs a VMID comparison using the VMID comparator that the CONTEXT field specifies, and signals a match if both the VMID comparator and the address comparator match.
		3	The trace unit performs a Context ID comparison and a VMID comparison using the comparators that the CONTEXT field specifies, and signals a match if the Context ID comparator matches, the VMID comparator matches, and the address comparator matches.

Table 48-864: A55_C2_TRCACATR7_31_0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	TYPE	TYPE.. Controls what type of comparison the trace unit performs: 00 Instruction address. 01 Data load address. 10 Data store address. 11 Data load address or data store address. If TRCIDR4.SUPPDAC does not indicate that data address comparisons are implemented, then this field is RES0. This means that any comparison performed by this address comparator is an instruction address comparison.	
		0	Instruction address.
		1	Data load address.
		2	Data store address.
		3	Data load address or data store address.

Trace Address Comparator Access Type Registers.

Defines the type of access for the corresponding TRCACVRn register. This register configures the context type, exception levels, alignment and masking that is applied by the address comparator, as well as how the address comparator behaves when it is acting as part of an address range comparator.

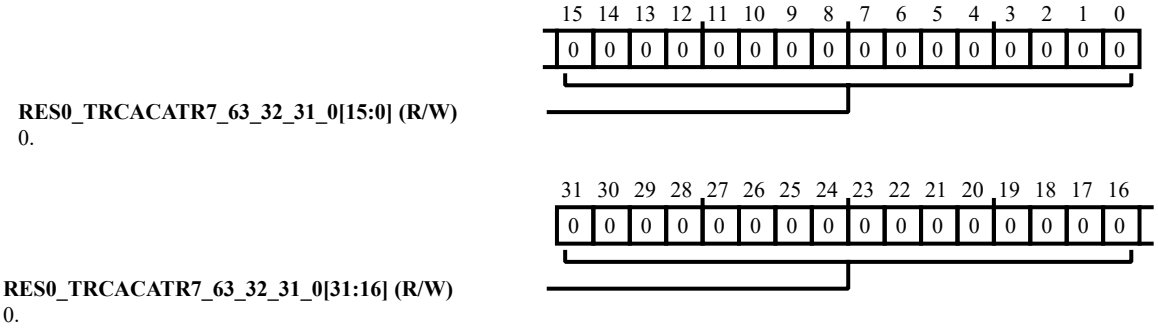

Figure 48-857: A55_C2_TRCACATR7_63_32 Register Diagram

Trace Auxiliary Control Register.

The function of this register is IMPLEMENTATION DEFINED.

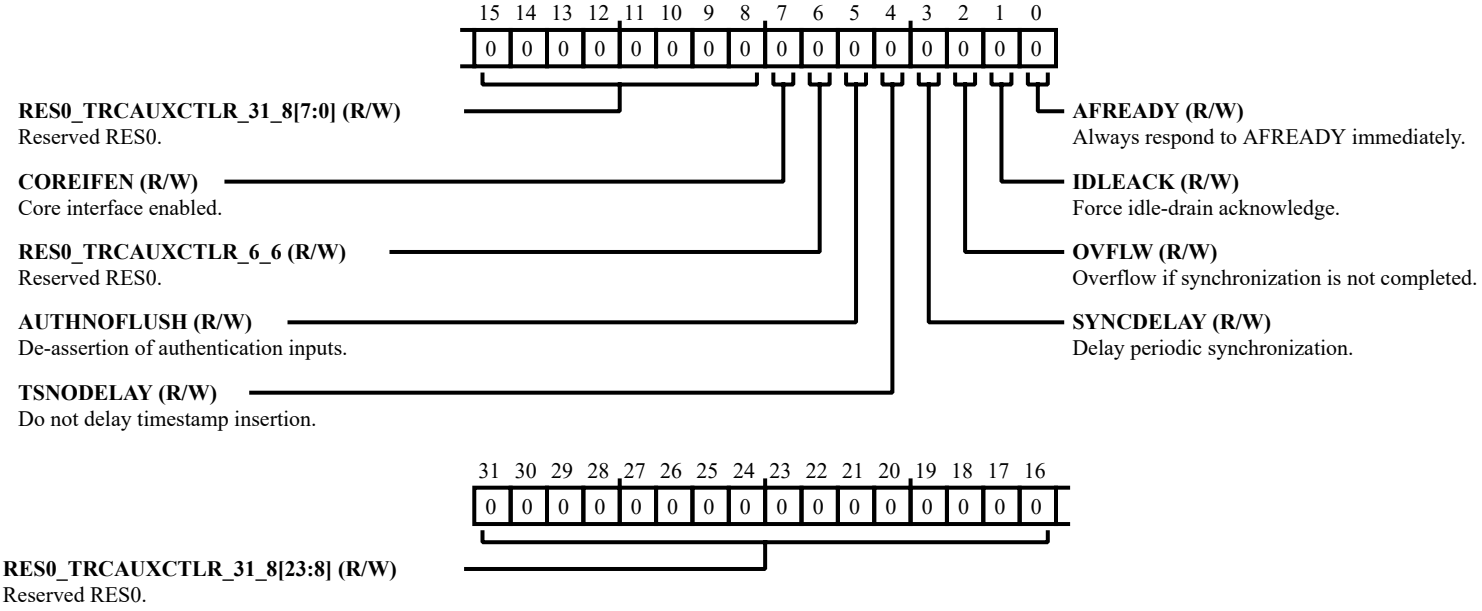

Figure 48-874: A55_C2_TRCAUXCTLR Register Diagram

Table 48-882: A55_C2_TRCAUXCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:8 (R/W)	RES0_TRCAUXCTLR_31_8	Reserved RES0.. Reserved RES0.	
		0	Reserved.
7 (R/W)	COREIFEN	Core interface enabled.. Keep core interface enabled regardless of trace enable register state.	
		0	Core interface enabled is set by trace enable register state.
		1	Enable core interface regardless of trace enable register state.
6 (R/W)	RES0_TRCAUXCTLR_6_6	Reserved RES0.. Reserved RES0.	
		0	Reserved.

Table 48-882: A55_C2_TRCAUXCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
5 (R/W)	AUTHNOFLUSH	De-assertion of authentication inputs..	
		Do not flush trace on de-assertion of authentication inputs. When this bit is set to 1 the trace unit behavior deviates from architecturally-specified behavior.	
		0	ETM trace unit FIFO is flushed and ETM trace unit enters idle state when DBGEN or NIDEN is LOW.
		1	ETM trace unit FIFO is not flushed and ETM trace unit does not enter idle state when DBGEN or NIDEN is LOW.
4 (R/W)	TSNODELAY	Do not delay timestamp insertion..	
		Do not delay timestamp insertion based on FIFO depth.	
		0	Timestamp packets are inserted into FIFO only when trace activity is LOW.
		1	Timestamp packets are inserted into FIFO irrespective of trace activity.
3 (R/W)	SYNCDELAY	Delay periodic synchronization..	
		Delay periodic synchronization if FIFO is more than half-full.	
		0	ETM trace unit AFREADYM output is asserted only when the ETM trace unit is in idle state or when all the trace bytes in FIFO before a flush request are output.
		1	ETM trace unit AFREADYM output is always asserted HIGH. When this bit is set to 1 trace unit behavior deviates from architecturally-specified behavior.
2 (R/W)	OVFLW	Overflow if synchronization is not completed..	
		Force an overflow if synchronization is not completed when second synchronization becomes due. When this bit is set to 1 the trace unit behavior deviates from architecturally-specified behavior.	
		0	ETM trace unit idle acknowledge is asserted only when the ETM trace unit is in idle state.
		1	ETM trace unit idle acknowledge is asserted irrespective of the ETM trace unit idle state.
1 (R/W)	IDLEACK	Force idle-drain acknowledge..	
		Force idle-drain acknowledge high CPU does not wait for trace to drain before entering WFX state. When this bit is set to 1 trace unit behavior deviates from architecturally-specified behavior.	
		0	No FIFO overflow when SYNC packets are delayed.
		1	Forces FIFO overflow when SYNC packets are delayed.

Table 48-882: A55_C2_TRCAUXCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	AFREADY	Always respond to AFREADY immediately.. Always respond to AFREADY immediately. Does not have any interaction with FIFO draining even in WFI state.	
		0	SYNC packets are inserted into FIFO only when trace activity is low.
		1	SYNC packets are inserted into FIFO irrespective of trace activity.

Trace Branch Broadcast Control Register.

Controls which regions in the memory map are enabled to use branch broadcasting.

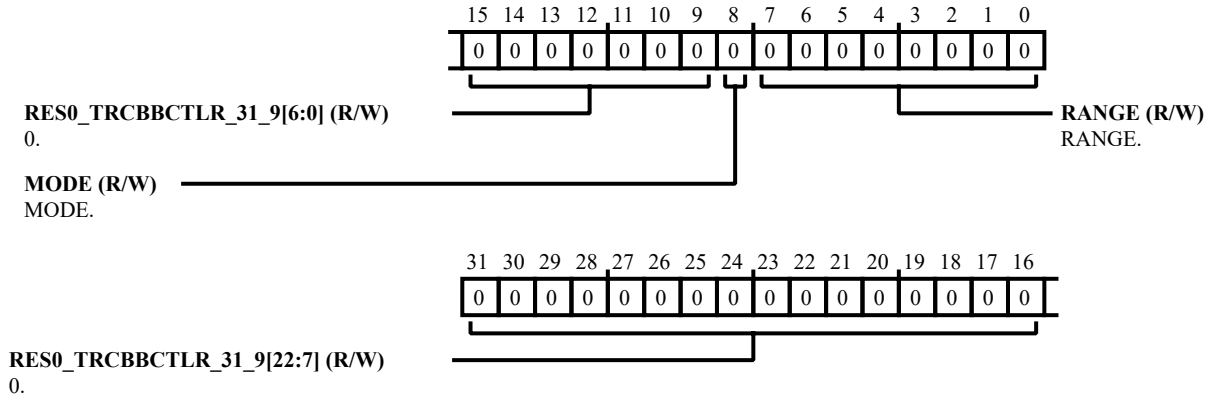

Figure 48-875: A55_C2_TRCBBCTLR Register Diagram

Table 48-883: A55_C2_TRCBBCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:9 (R/W)	RES0_TRCBBCTLR_31_9	0.. Reserved, RES0.	
8 (R/W)	MODE	MODE.. Mode bit: 0 Exclude mode. Branch broadcasting is not enabled in the address range that RANGE defines. If RANGE==0 then branch broadcasting is enabled for the entire memory map. 1 Include mode. Branch broadcasting is enabled in the address range that RANGE defines. If RANGE==0 then the branch broadcasting behavior is UNPREDICTABLE.	
		0	Exclude mode. Branch broadcasting is not enabled in the address range that RANGE defines. If RANGE==0 then branch broadcasting is enabled for the entire memory map.
		1	Include mode. Branch broadcasting is enabled in the address range that RANGE defines. If RANGE==0 then the branch broadcasting behavior is UNPREDICTABLE.

Table 48-883: A55_C2_TRCBBCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:0 (R/W)	RANGE	RANGE.. Address range field. Selects which address range comparator pairs are in use with branch broadcasting. Each bit represents an address range comparator pair, so bit[n] controls the selection of address range comparator pair n. If bit[n] is: 0 The address range that address range comparator pair n defines is not selected. 1 The address range that address range comparator pair n defines is selected.	
		0	The address range that address range comparator pair n defines is not selected.
		1	The address range that address range comparator pair n defines is selected.

Trace Cycle Count Control Register.

Sets the threshold value for cycle counting.

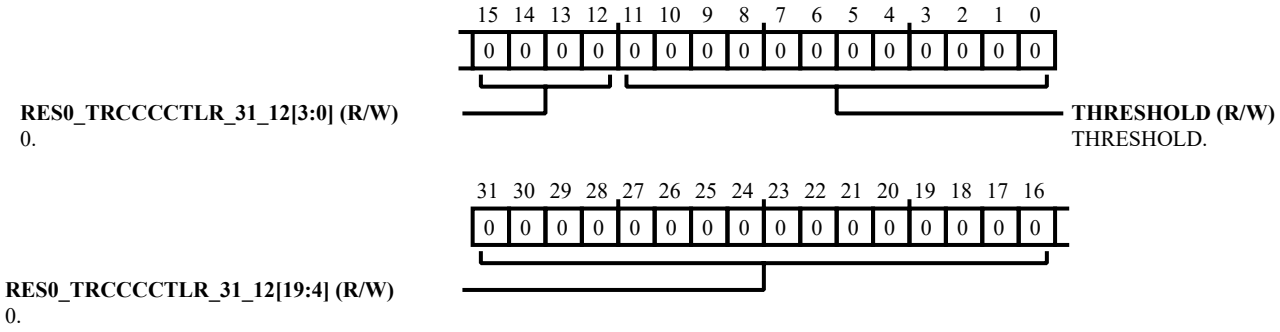

Figure 48-876: A55_C2_TRCCCCTLR Register Diagram

Table 48-884: A55_C2_TRCCCCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:12 (R/W)	RES0_TRCCCCTLR_31_12	0.. Reserved, RES0.
11:0 (R/W)	THRESHOLD	THRESHOLD.. Sets the threshold value for instruction trace cycle counting.The minimum threshold value that can be programmed into THRESHOLD is given in TRCIDR3.CCITMIN.Writing a value of zero might cause UNPREDICTABLE behaviour.

Trace Context ID Comparator Control Register 0.

Contains Context ID mask values for the TRCCIDCVRn registers, where n=0-3.

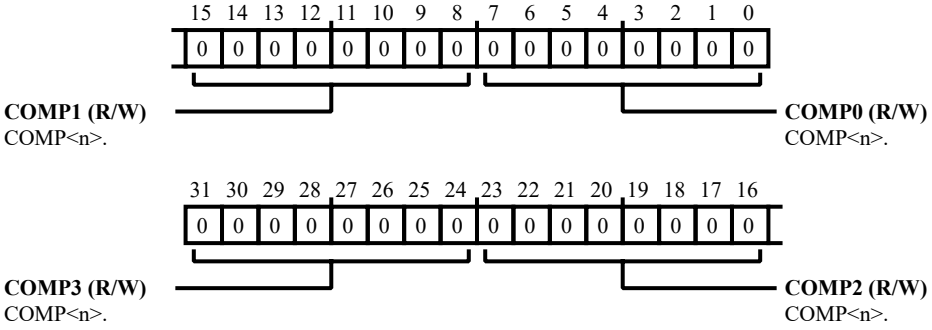

Figure 48-877: A55_C2_TRCCIDCCTLR0 Register Diagram

Table 48-885: A55_C2_TRCCIDCCTLR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/W)	COMP3	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.

Table 48-885: A55_C2_TRCCIDCCTLR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:16 (R/W)	COMP2	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
15:8 (R/W)	COMP1	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
7:0 (R/W)	COMP0	COMP<n>.. Controls the mask value that the trace unit applies to TRCCIDCVRn. Each bit in this field corresponds to a byte in TRCCIDCVRn. When a bit is: 0 The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. 1 The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison. Supported only if TRCIDR4.NUMCIDC > n, otherwise the field is RES0.	
		0	The trace unit includes the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.
		1	The trace unit ignores the relevant byte in TRCCIDCVRn when it performs the Context ID comparison.

Trace Context ID Comparator Value Registers.

Contains a Context ID value.

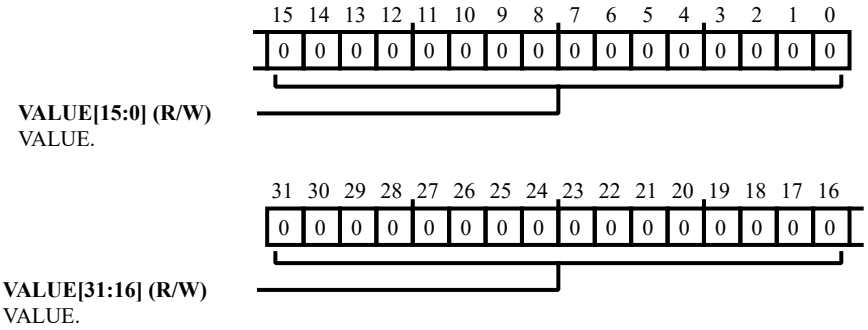

Figure 48-878: A55_C2_TRCCIDCVR0_31_0 Register Diagram

Table 48-886: A55_C2_TRCCIDCVR0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. Context ID value. The implemented width of this field is IMPLEMENTATION DEFINED and is set by TRCIDR2.CIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the Context ID is zero until the processor updates the Context ID.

Trace Context ID Comparator Value Registers.

Contains a Context ID value.

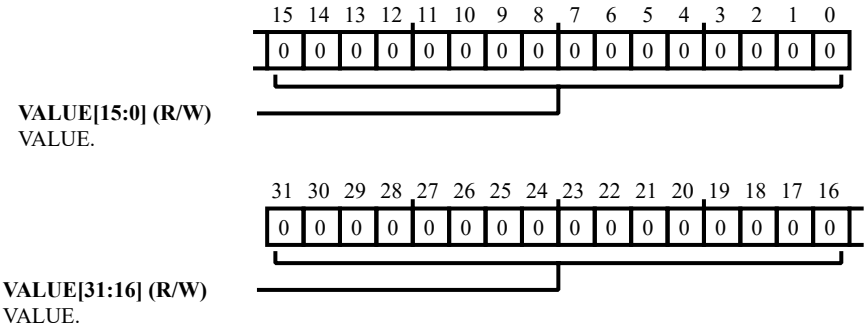

Figure 48-879: A55_C2_TRCCIDCVR0_63_32 Register Diagram

Table 48-887: A55_C2_TRCCIDCVR0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. Context ID value. The implemented width of this field is IMPLEMENTATION DEFINED and is set by TRCIDR2.CIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the Context ID is zero until the processor updates the Context ID.

Trace Claim Tag Clear Register.

Software can use this to clear a claim tag bit to 0, and to read the values of the claim tag.

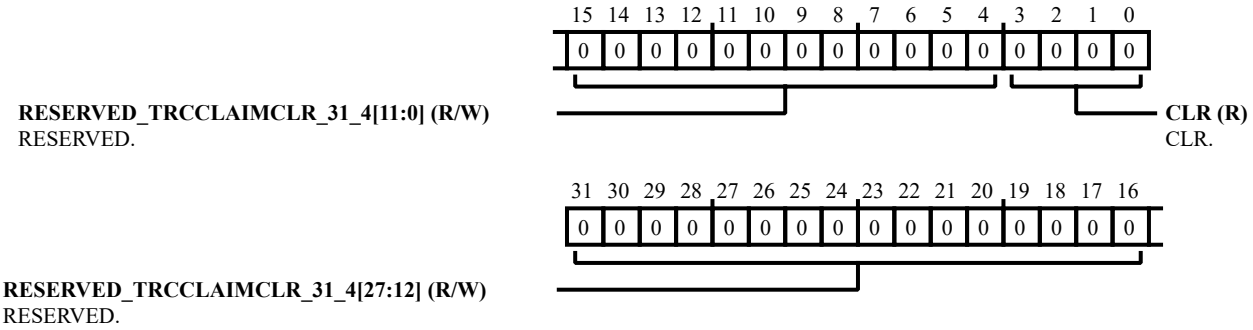

Figure 48-880: A55_C2_TRCCLAIMCLR Register Diagram

Table 48-888: A55_C2_TRCCLAIMCLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/W)	RESERVED_TRCCLAIMCLR_31_4	RESERVED.. Reserved RES0.	
		0	Reserved.
3:0 (R/NW)	CLR	CLR.. Clears bits in the claim tag and determines the current value of the claim tag.	
		0	On reads for each bit Claim tag bit is set.
		1	On reads for each bit Claim tag bit is not set.

Trace Claim Tag Set Register.

Software can use this to set bits in the claim tag to 1, and discover the number of bits that the claim tag supports.

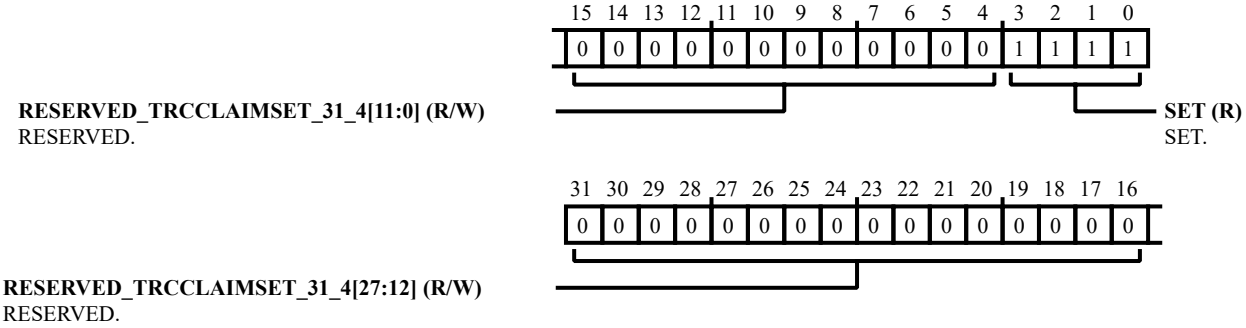

Figure 48-881: A55_C2_TRCCLAIMSET Register Diagram

Table 48-889: A55_C2_TRCCLAIMSET Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/W)	RESERVED_TRCCLAIM-SET_31_4	RESERVED.. Reserved RES0.	
		0	Reserved.
3:0 (R/NW)	SET	SET.. Sets bits in the claim tag and determines the number of claim tag bits implemented.	
		0	On reads for each bit Claim tag bit is implemented.
		1	On reads for each bit Claim tag bit is not implemented.

Trace Counter Control Registers.

Trace Counter Control Registers.

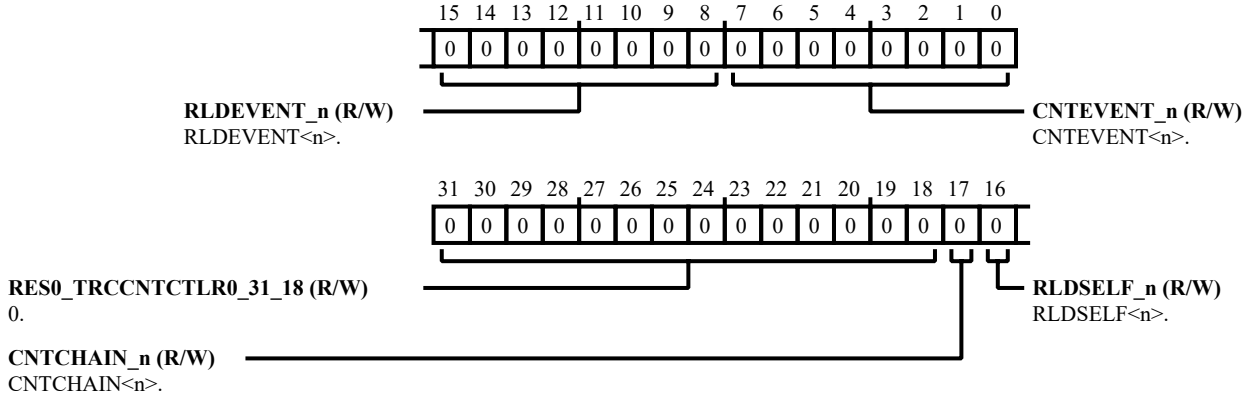

Figure 48-882: A55_C2_TRCCNTCTLR0 Register Diagram

Table 48-890: A55_C2_TRCCNTCTLR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:18 (R/W)	RES0_TRCCNTCTLR0_31_18	0.. Reserved, RES0.	
17 (R/W)	CNTCHAIN_N	CNTCHAIN<n>.. For TRCCNTCTLR3 and TRCCNTCTLR1, controls whether counter <n> decrements when a reload event occurs for counter <n-1>: 0 1 For TRCCNTCTLR2 and TRCCNTCTLR0, this bit is RES0.	
		0	
		1	
16 (R/W)	RLDSELF_N	RLDSELF<n>.. Controls whether a reload event occurs for counter <n>, when counter <n> reaches zero: 0 The trace unit does not generate a reload event. 1 The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.	
		0	The trace unit does not generate a reload event.
		1	The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.
15:8 (R/W)	RLDEVENT_N	RLDEVENT<n>.. Selects an event, that when it occurs causes a reload event for counter <n>.	

Table 48-890: A55_C2_TRCCNTCTLR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
7:0 (R/W)	CNTEVENT_N	CNTEVENT<n>.. Selects an event, that when it occurs causes counter <n> to decrement.

Trace Counter Control Registers.

Trace Counter Control Registers.

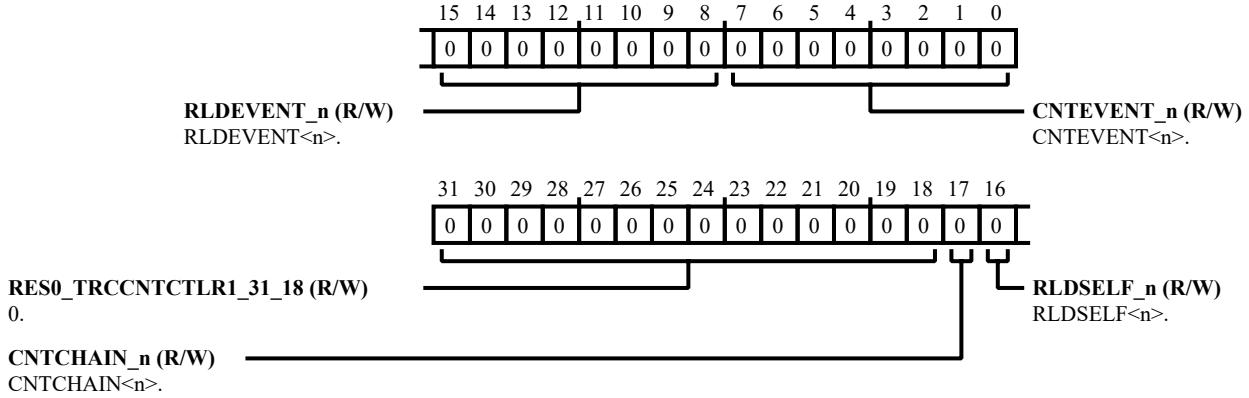

Figure 48-883: A55_C2_TRCCNTCTLR1 Register Diagram

Table 48-891: A55_C2_TRCCNTCTLR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:18 (R/W)	RES0_TRCCNTCTLR1_31_18	0.. Reserved, RES0.	
17 (R/W)	CNTCHAIN_N	CNTCHAIN<n>.. For TRCCNTCTLR3 and TRCCNTCTLR1, controls whether counter <n> decrements when a reload event occurs for counter <n-1>: 0 1 For TRCCNTCTLR2 and TRCCNTCTLR0, this bit is RES0.	
		0	
		1	
16 (R/W)	RLDSELF_N	RLDSELF<n>.. Controls whether a reload event occurs for counter <n>, when counter <n> reaches zero: 0 The trace unit does not generate a reload event. 1 The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.	
		0	The trace unit does not generate a reload event.
		1	The trace unit generates a reload event for counter <n>, provided that the event resource that CNTEVENT<n> specifies is active.
15:8 (R/W)	RLDEVENT_N	RLDEVENT<n>.. Selects an event, that when it occurs causes a reload event for counter <n>.	

Table 48-891: A55_C2_TRCCNTCTLR1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
7:0 (R/W)	CNTEVENT_N	CNTEVENT<n>.. Selects an event, that when it occurs causes counter <n> to decrement.

Trace Counter Reload Value Registers.

This sets or returns the reload count value for counter 0.

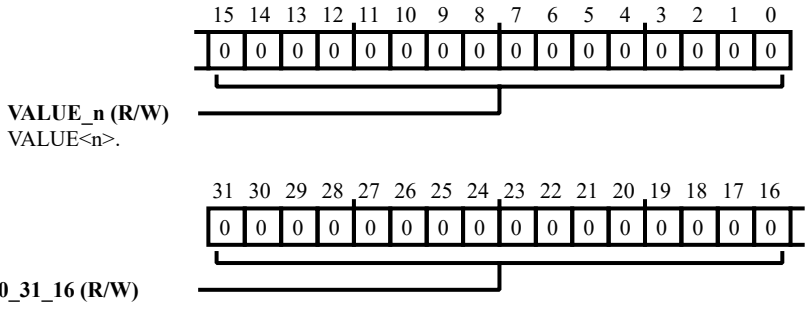

Figure 48-884: A55_C2_TRCCNTRLDVR0 Register Diagram

Table 48-892: A55_C2_TRCCNTRLDVR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTRLDVR0_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the reload value for counter <n>. When a reload event occurs for counter <n> then the trace unit copies the VALUE<n> field into counter <n>.

Trace Counter Reload Value Registers.

This sets or returns the reload count value for counter 1.

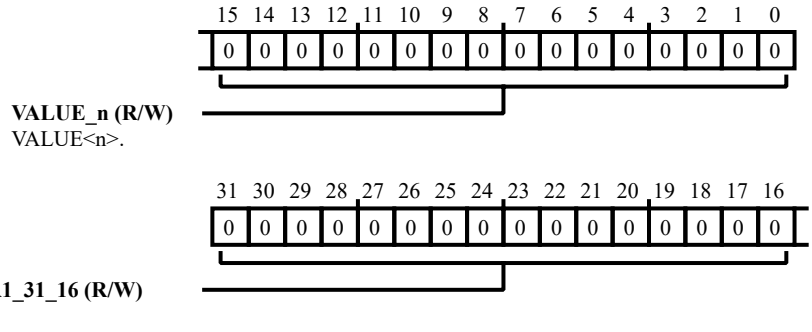

Figure 48-885: A55_C2_TRCCNTRLDVR1 Register Diagram

Table 48-893: A55_C2_TRCCNTRLDVR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTRLDVR1_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the reload value for counter <n>. When a reload event occurs for counter <n> then the trace unit copies the VALUE<n> field into counter <n>.

Trace Counter Value Registers.

This sets or returns the value of counter 0.

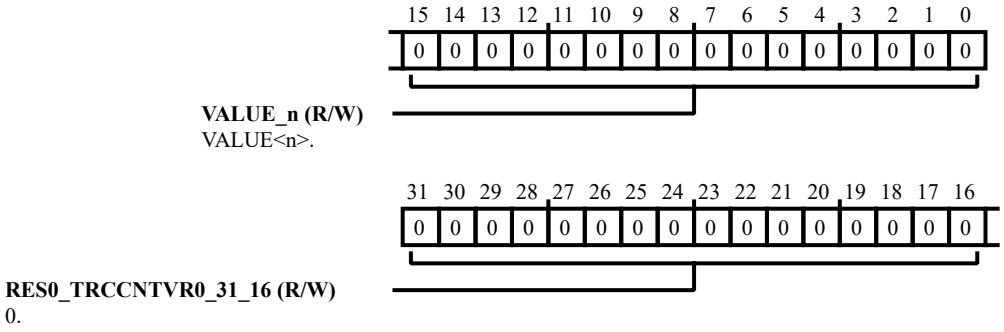

Figure 48-886: A55_C2_TRCCNTVR0 Register Diagram

Table 48-894: A55_C2_TRCCNTVR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTVR0_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the count value of counter <n>.

Trace Counter Value Registers.

This sets or returns the value of counter 1.

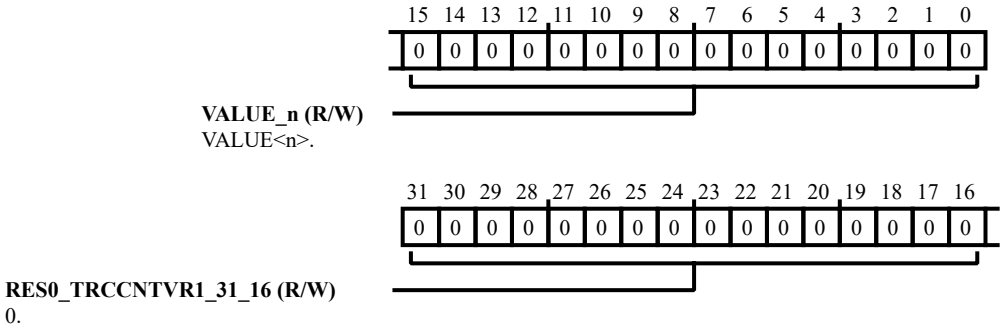

Figure 48-887: A55_C2_TRCCNTVR1 Register Diagram

Table 48-895: A55_C2_TRCCNTVR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCCNTVR1_31_16	0.. Reserved, RES0.
15:0 (R/W)	VALUE_N	VALUE<n>.. Contains the count value of counter <n>.

Trace Configuration Register.

Controls the tracing options.

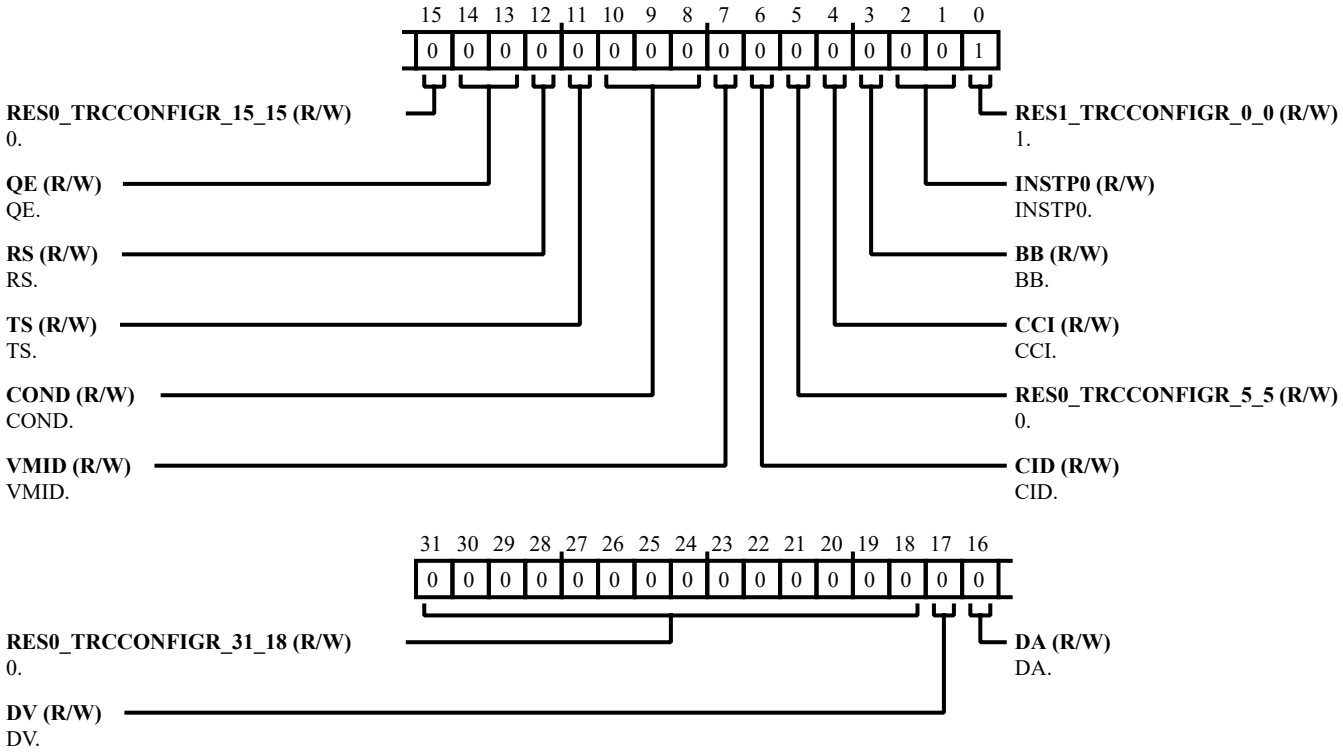

Figure 48-888: A55_C2_TRCCONFIGR Register Diagram

Table 48-896: A55_C2_TRCCONFIGR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:18 (R/W)	RES0_TRCCON-FIGR_31_18	0.. Reserved, RES0.	
17 (R/W)	DV	DV.. Data value tracing bit: 0 Data value tracing is disabled. 1 Data value tracing is enabled when INSTP0 is not 0b00. TRCIDR0.TRCDATA indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Data value tracing is disabled.
		1	Data value tracing is enabled when INSTP0 is not 0b00.

Table 48-896: A55_C2_TRCCONFIGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
16 (R/W)	DA	DA.. Data address tracing bit: 0 Data address tracing is disabled. 1 Data address tracing is enabled when INSTP0 is not 0b00. TRCIDR0.TRCDATA indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Data address tracing is disabled.
		1	Data address tracing is enabled when INSTP0 is not 0b00.
15 (R/W)	RES0_TRCCON-FIGR_15_15	0.. Reserved, RES0.	
14:13 (R/W)	QE	QE.. Q element enable field: 00 Q elements are disabled. 01 Q elements with instruction counts are enabled. Q elements without instruction counts are disabled. 11 Q elements with and without instruction counts are enabled. The value 0b10 is reserved.TRCIDR0.QSUPP indicates which values of this field are implemented.TRCCONFIGR.QE must be set to 0b00 if any of the following are true:TRCCONFIGR.INSTP0 is not 0b00.TRCCONFIGR.COND is not 0b000.TRCCONFIGR.BB is not 0.	
		0	Q elements are disabled.
		1	Q elements with instruction counts are enabled. Q elements without instruction counts are disabled.
		3	Q elements with and without instruction counts are enabled.
12 (R/W)	RS	RS.. Return stack enable bit. 0 Return stack is disabled. 1 Return stack is enabled. TRCIDR0.RETSTACK indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Return stack is disabled.
		1	Return stack is enabled.
11 (R/W)	TS	TS.. Global timestamp tracing bit: 0 Global timestamp tracing is disabled. 1 Global timestamp tracing is enabled. TRCTSCTLR controls the insertion of timestamps in the trace. TRCIDR0.TSSIZE indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Global timestamp tracing is disabled.
		1	Global timestamp tracing is enabled. TRCTSCTLR controls the insertion of timestamps in the trace.

Table 48-896: A55_C2_TRCCONFIGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
10:8 (R/W)	COND	COND.. Conditional instruction tracing bit. The permitted values are: 000 Conditional instruction tracing is disabled. 001 Conditional load instructions are traced. 010 Conditional store instructions are traced. 011 Conditional load and store instructions are traced. 111 All conditional instructions are traced. All other values are reserved.TRCIDR0.TRCCOND indicates whether this field is supported. If it is not supported then this field is RES0.	
		0	Conditional instruction tracing is disabled.
		1	Conditional load instructions are traced.
		2	Conditional store instructions are traced.
		3	Conditional load and store instructions are traced.
		7	All conditional instructions are traced.
7 (R/W)	VMID	VMID.. VMID tracing bit: 0 VMID tracing is disabled. 1 VMID tracing is enabled. TRCIDR2.VMIDSIZE indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	VMID tracing is disabled.
		1	VMID tracing is enabled.
6 (R/W)	CID	CID.. Context ID tracing bit: 0 Context ID tracing is disabled. 1 Context ID tracing is enabled. TRCIDR2.CIDSIZE indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Context ID tracing is disabled.
		1	Context ID tracing is enabled.
5 (R/W)	RES0_TRCCONFIGR_5_5	0.. Reserved, RES0.	
4 (R/W)	CCI	CCI.. Cycle counting instruction trace bit: 0 Cycle counting in the instruction trace is disabled. 1 Cycle counting in the instruction trace is enabled. TRCCCCTLR controls the threshold value for cycle counting. TRCIDR0.TRCCCI indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Cycle counting in the instruction trace is disabled.
		1	Cycle counting in the instruction trace is enabled. TRCCCCTLR controls the threshold value for cycle counting.

Table 48-896: A55_C2_TRCCONFIGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3 (R/W)	BB	BB.. Branch broadcast mode bit: 0 Branch broadcast mode is disabled. 1 Branch broadcast mode is enabled. TRCBBCTLR controls which regions of memory are enabled to use branch broadcasting. TRCIDR0.TRCBB indicates whether this bit is supported. If it is not supported then this bit is RES0.	
		0	Branch broadcast mode is disabled.
		1	Branch broadcast mode is enabled. TRCBBCTLR controls which regions of memory are enabled to use branch broadcasting.
2:1 (R/W)	INSTP0	INSTP0.. Instruction P0 bit. This field controls whether load and store instructions are traced as P0 instructions: 00 Do not trace load and store instructions as P0 instructions. 01 Trace load instructions as P0 instructions. 10 Trace store instructions as P0 instructions. 11 Trace load and store instructions as P0 instructions. TRCIDR0.INSTP0 indicates whether this field is supported. If it is not supported then this field is RES0.	
		0	Do not trace load and store instructions as P0 instructions.
		1	Trace load instructions as P0 instructions.
		2	Trace store instructions as P0 instructions.
		3	Trace load and store instructions as P0 instructions.
0 (R/W)	RES1_TRCCONFIGR_0_0	1.. Reserved, RES1.	

Trace Event Control 0 Register.

Trace Event Control 0 Register.

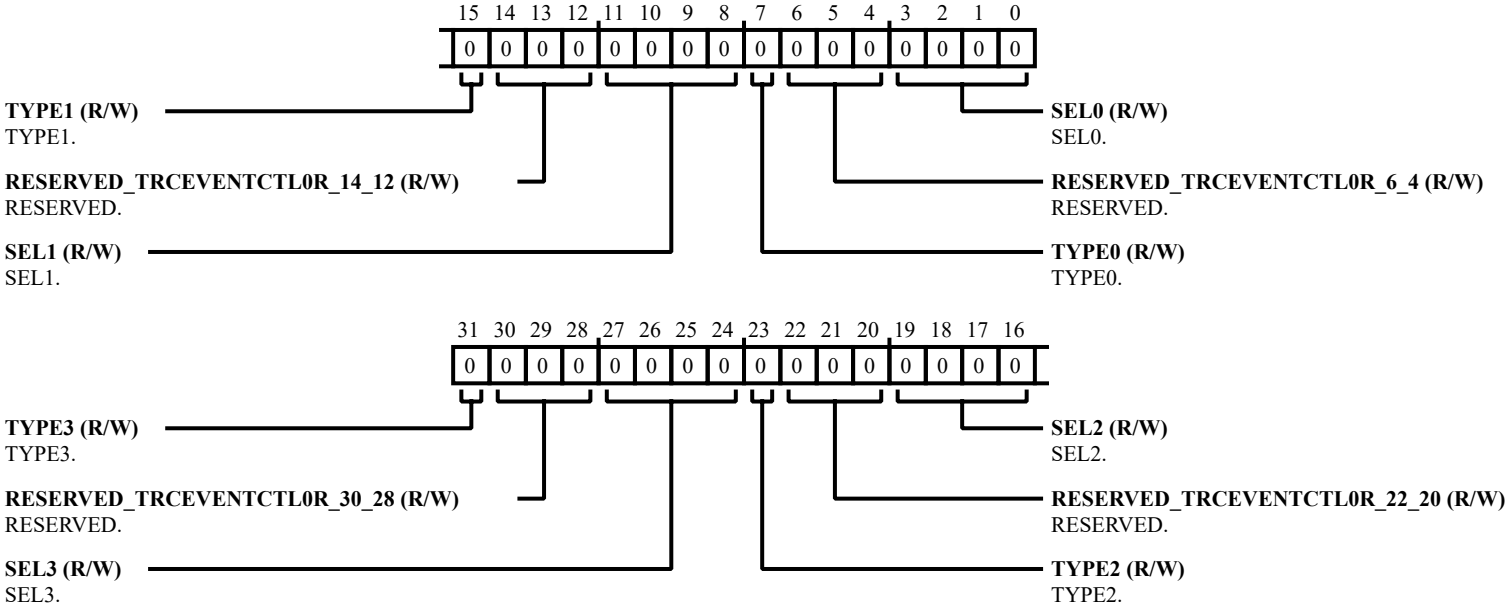

Figure 48-889: A55_C2_TRCEVENTCTL0R Register Diagram

Table 48-897: A55_C2_TRCEVENTCTL0R Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	TYPE3	TYPE3.. Selects the resource type for trace event 3.	
		0	Single selected resource.
		1	Boolean combined resource pair.
30:28 (R/W)	RESERVED_TRCE-VENTCTL0R_30_28	RESERVED.. Reserved RES0.	
		0	Reserved.
27:24 (R/W)	SEL3	SEL3.. Selects the resource number based on the value of TYPE3.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].

Table 48-897: A55_C2_TRCEVENTCTL0R Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23 (R/W)	TYPE2	TYPE2.. Selects the resource type for trace event 2.	
		0	Single selected resource.
		1	Boolean combined resource pair.
22:20 (R/W)	RESERVED_TRCE-VENTCTL0R_22_20	RESERVED.. Reserved RES0.	
		0	Reserved.
19:16 (R/W)	SEL2	SEL2.. Selects the resource number based on the value of TYPE2.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].
15 (R/W)	TYPE1	TYPE1.. Selects the resource type for trace event 1.	
		0	Single selected resource.
		1	Boolean combined resource pair.
14:12 (R/W)	RESERVED_TRCE-VENTCTL0R_14_12	RESERVED.. Reserved RES0.	
		0	Reserved.
11:8 (R/W)	SEL1	SEL1.. Selects the resource number based on the value of TYPE1.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].
7 (R/W)	TYPE0	TYPE0.. Selects the resource type for trace event 0.	
		0	Single selected resource.
		1	Boolean combined resource pair.
6:4 (R/W)	RESERVED_TRCE-VENTCTL0R_6_4	RESERVED.. Reserved RES0.	
		0	Reserved.

Table 48-897: A55_C2_TRCEVENTCTL0R Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	SEL0	SEL0.. Selects the resource number based on the value of TYPE0.	
		0	Selects a single selected resource from 0-15 defined by bits[3:0].
		1	Selects a Boolean combined resource pair from 0-7 defined by bits[2:0].

Trace Event Control 1 Register.

Trace Event Control 1 Register.

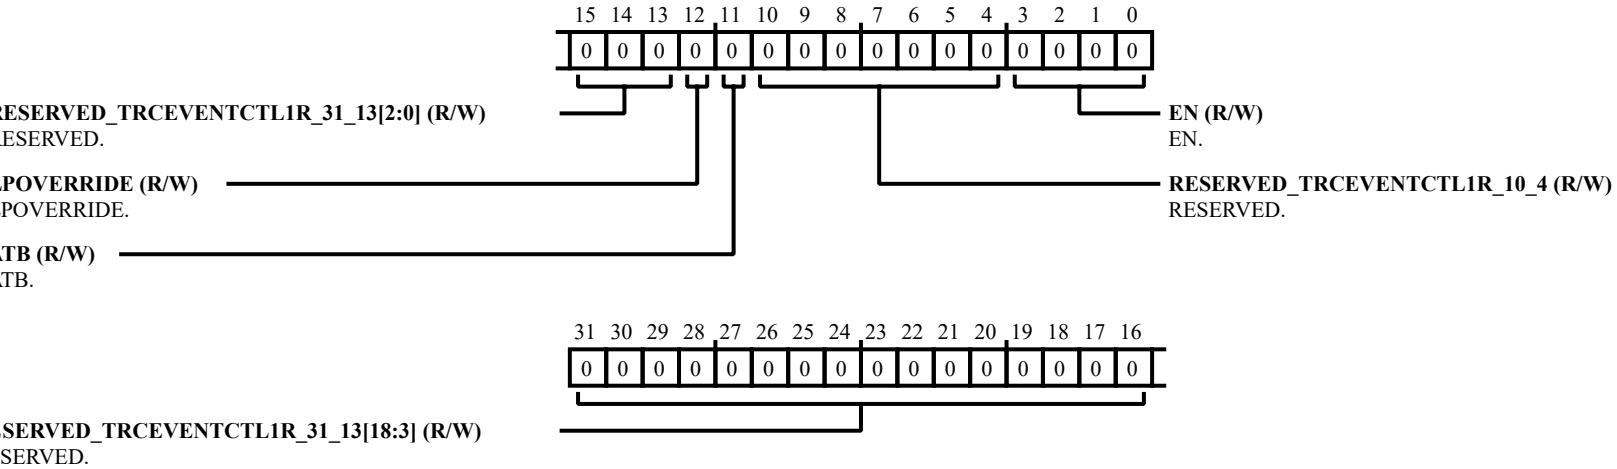

Figure 48-890: A55_C2_TRCEVENTCTL1R Register Diagram

Table 48-898: A55_C2_TRCEVENTCTL1R Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:13 (R/W)	RESERVED_TRCE-VENTCTL1R_31_13	RESERVED.. Reserved RES0.	
		0	Reserved.
12 (R/W)	LPOVERRIDE	LPOVERRIDE.. Low power state behavior override.	
		0	Low power state behavior unaffected.
		1	Low power state behavior overridden. The resources and Event trace generation are unaffected by entry to a low power state.
11 (R/W)	ATB	ATB.. ATB trigger enable.	
		0	ATB trigger disabled.
		1	ATB trigger enabled.
10:4 (R/W)	RESERVED_TRCE-VENTCTL1R_10_4	RESERVED.. Reserved RES0.	
		0	Reserved.

Table 48-898: A55_C2_TRCEVENTCTL1R Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	EN	EN.. One bit per event to enable generation of an event element in the instruction trace stream when the selected event occurs.	
		0	Event does not cause an event element.
		1	Event causes an event element.

Trace External Input Select Register.

Use this to set, or read, which external inputs are resources to the trace unit.

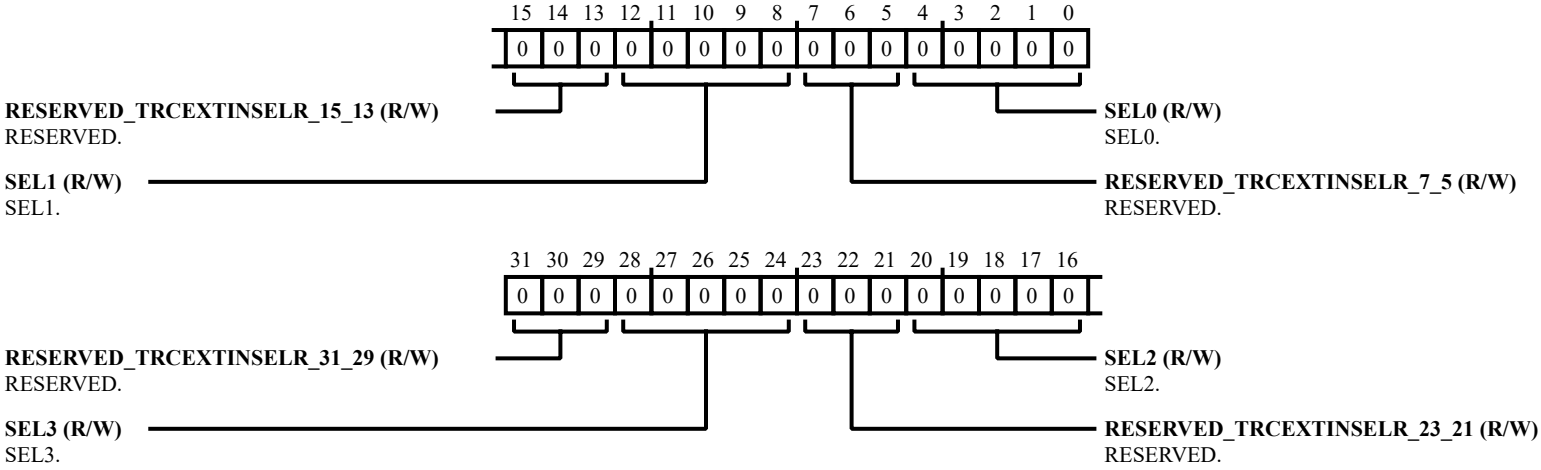

Figure 48-891: A55_C2_TRCEXTINSELR Register Diagram

Table 48-899: A55_C2_TRCEXTINSELR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/W)	RESERVED_TRCEXTIN-SELR_31_29	RESERVED.. Reserved RES0.	
		0	Reserved.
28:24 (R/W)	SEL3	SEL3.. Selects an event from the external input bus for External Input Resource 3.	
23:21 (R/W)	RESERVED_TRCEXTIN-SELR_23_21	RESERVED.. Reserved RES0.	
		0	Reserved.
20:16 (R/W)	SEL2	SEL2.. Selects an event from the external input bus for External Input Resource 2.	
15:13 (R/W)	RESERVED_TRCEXTIN-SELR_15_13	RESERVED.. Reserved RES0.	
		0	Reserved.
12:8 (R/W)	SEL1	SEL1.. Selects an event from the external input bus for External Input Resource 1.	

Table 48-899: A55_C2_TRCEXTINSELR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:5 (R/W)	RESERVED_TRCEXTIN-SELR_7_5	RESERVED.. Reserved RES0.	
		0	Reserved.
4:0 (R/W)	SEL0	SEL0.. Selects an event from the external input bus for External Input Resource 0.	

Trace ID Register 0.

Returns the tracing capabilities of the trace unit.

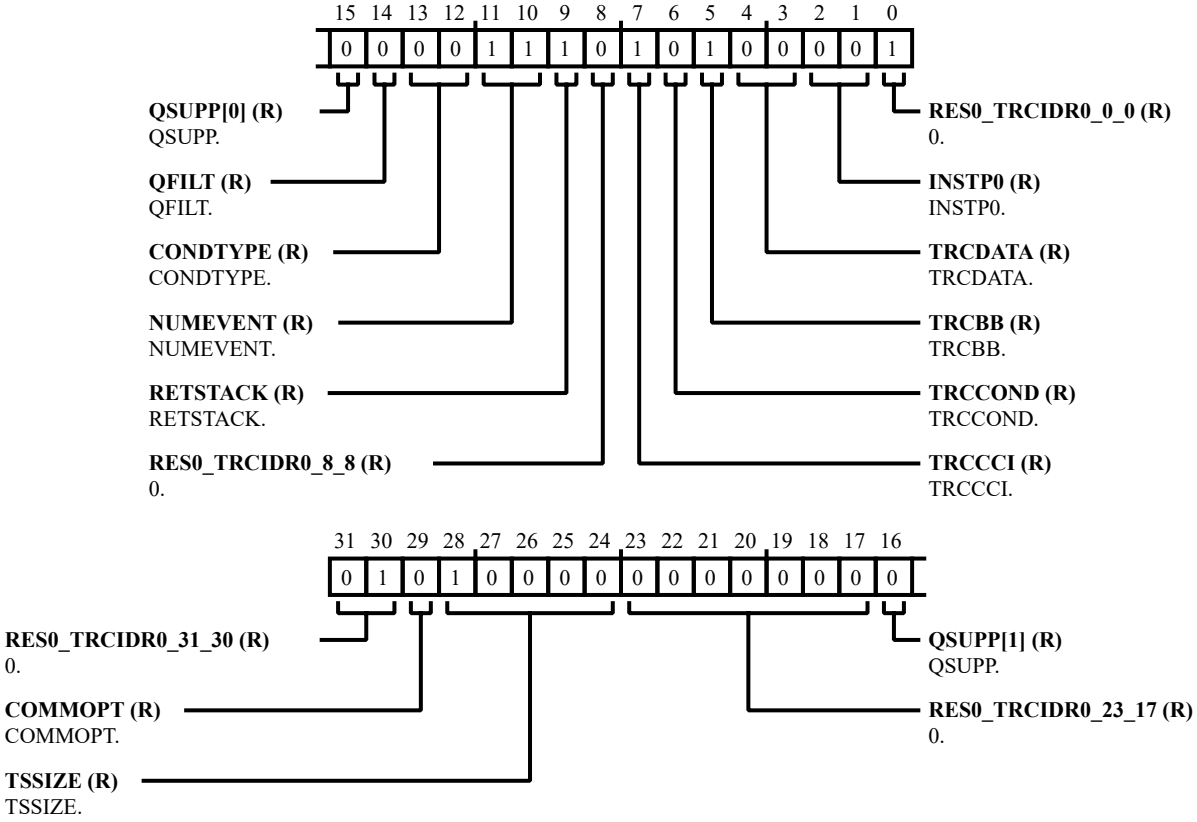

Figure 48-892: A55_C2_TRCIDR0 Register Diagram

Table 48-900: A55_C2_TRCIDR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:30 (R/NW)	RES0_TRCIDR0_31_30	0.. Reserved, RES0.	
29 (R/NW)	COMMOPT	COMMOPT.. Conditional instruction tracing support bit. Indicates if the trace unit supports conditional instruction tracing: 0 Conditional instruction tracing is not supported. 1 Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.	
		0	Conditional instruction tracing is not supported.
		1	Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.

Table 48-900: A55_C2_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28:24 (R/NW)	TSSIZE	TSSIZE.. Global timestamp size field. The permitted values are: 00000 Global timestamping is not implemented. 00110 Implementation supports a maximum global timestamp of 48bits. 01000 Implementation supports a maximum global timestamp of 64bits. All other values are reserved.When global timestamping is implemented then TRCCONFIGR.TS and TRCTSCTLR are supported.	
		0	Global timestamping is not implemented.
		6	Implementation supports a maximum global timestamp of 48bits.
		8	Implementation supports a maximum global timestamp of 64bits.
23:17 (R/NW)	RES0_TRCIDR0_23_17	0.. Reserved, RES0.	
16:15 (R/NW)	QSUPP	QSUPP.. Q element support field. The permitted values are: 00 Q element support is not implemented. TRCCONFIGR.QE is RES0. 01 Q element support is implemented, and only supports Q elements with instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b01. 10 Q element support is implemented, and only supports Q elements without instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b11. 11 Q element support is implemented, and supports both Q elements with instruction counts and Q elements without instruction counts. TRCCONFIGR.QE is fully implemented.	
		0	Q element support is not implemented. TRCCONFIGR.QE is RES0.
		1	Q element support is implemented, and only supports Q elements with instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b01.
		2	Q element support is implemented, and only supports Q elements without instruction counts. TRCCONFIGR.QE can only take the values 0b00 or 0b11.
		3	Q element support is implemented, and supports both Q elements with instruction counts and Q elements without instruction counts. TRCCONFIGR.QE is fully implemented.

Table 48-900: A55_C2_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
14 (R/NW)	QFILT	QFILT.. Q element filtering support field. The permitted values are: 0 Q element filtering is not implemented. 1 Q element filtering is implemented. TRCQCTLR is implemented. When QSUPP==0b00, this field is RES0.	
		0	Q element filtering is not implemented.
		1	Q element filtering is implemented. TRCQCTLR is implemented.
13:12 (R/NW)	CONDTYPE	CONDTYPE.. Conditional tracing field. The permitted values are: 00 The trace unit indicates only if a conditional instruction is a pass or fail. 01 The trace unit provides the Current Program Status Register (CPSR) status, for a conditional instruction. All other values are reserved.	
		0	The trace unit indicates only if a conditional instruction is a pass or fail.
		1	The trace unit provides the Current Program Status Register (CPSR) status, for a conditional instruction.
11:10 (R/NW)	NUMEVENT	NUMEVENT.. Number of events field. Indicates how many events the trace unit supports: 00 The trace unit supports 1 event. 01 The trace unit supports 2 events. 10 The trace unit supports 3 events. 11 The trace unit supports 4 events. This field controls how many fields are supported in TRCEVENTCTL0R, and indicates the size of TRCEVENTCTL1R.INSTEN.	
		0	The trace unit supports 1 event.
		1	The trace unit supports 2 events.
		2	The trace unit supports 3 events.
		3	The trace unit supports 4 events.
9 (R/NW)	RETSTACK	RETSTACK.. Return stack bit. Indicates if the implementation supports a return stack: 0 Return stack is not implemented. 1 Return stack is implemented, so TRCCONFIGR.RS is supported.	
		0	Return stack is not implemented.
		1	Return stack is implemented, so TRCCONFIGR.RS is supported.
8 (R/NW)	RES0_TRCIDR0_8_8	0.. Reserved, RES0.	

Table 48-900: A55_C2_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7 (R/NW)	TRCCCI	TRCCCI.. Cycle counting instruction bit. Indicates if the trace unit supports cycle counting for instructions: 0 Cycle counting in the instruction trace is not implemented. 1 Cycle counting in the instruction trace is implemented, so TRCCONFIGR.CCI and TRCCCCTLR are supported.	
		0	Cycle counting in the instruction trace is not implemented.
		1	Cycle counting in the instruction trace is implemented, so TRCCONFIGR.CCI and TRCCCCTLR are supported.
6 (R/NW)	TRCCOND	TRCCOND.. Conditional instruction tracing support bit. Indicates if the trace unit supports conditional instruction tracing: 0 Conditional instruction tracing is not supported. 1 Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.	
		0	Conditional instruction tracing is not supported.
		1	Conditional instruction tracing is supported, so TRCCONFIGR.COND is supported.
5 (R/NW)	TRCBB	TRCBB.. Branch broadcast tracing support bit. Indicates if the trace unit supports branch broadcast tracing: 0 Branch broadcast tracing is not supported. 1 Branch broadcast tracing is supported, so TRCCONFIGR.BB and TRCBBCTLR are supported.	
		0	Branch broadcast tracing is not supported.
		1	Branch broadcast tracing is supported, so TRCCONFIGR.BB and TRCBBCTLR are supported.
4:3 (R/NW)	TRCDATA	TRCDATA.. Conditional tracing field. The permitted values are: 00 Data tracing is not supported. 11 Tracing of data addresses and data values is supported, so TRCCONFIGR.DA, TRCCONFIGR.DV, TRCSTALLCTLR.DATADISCARD, TRCSTALLCTLR.INSTPRIORITY, TRCSTALLCTLR.DSTALL, and TRCEVENTCTL1R.DATAEN are supported. All other values are reserved.	
		0	Data tracing is not supported.
		3	Tracing of data addresses and data values is supported, so TRCCONFIGR.DA, TRCCONFIGR.DV, TRCSTALLCTLR.DATADISCARD, TRCSTALLCTLR.INSTPRIORITY, TRCSTALLCTLR.DSTALL, and TRCEVENTCTL1R.DATAEN are supported.

Table 48-900: A55_C2_TRCIDR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2:1 (R/NW)	INSTP0	INSTP0.. P0 tracing support field. The permitted values are: 00 Tracing of load and store instructions as P0 elements is not supported. 11 Tracing of load and store instructions as P0 elements is supported, so TRCCONFIGR.INSTP0 is supported. All other values are reserved.	
		0	Tracing of load and store instructions as P0 elements is not supported.
		3	Tracing of load and store instructions as P0 elements is supported, so TRCCONFIGR.INSTP0 is supported.
0 (R/NW)	RES0_TRCIDR0_0_0	0.. Reserved, RES0.	

Trace ID Register 1.

Returns the base architecture of the trace unit.

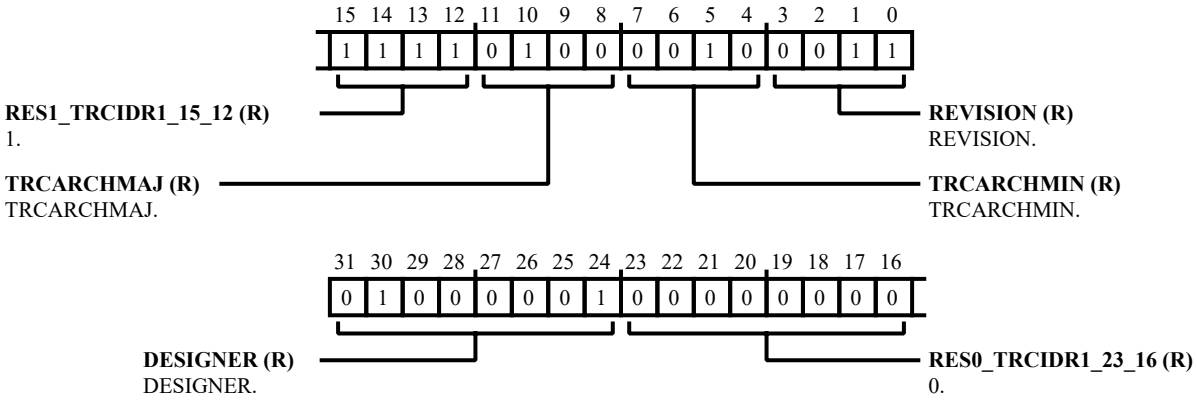

Figure 48-893: A55_C2_TRCIDR1 Register Diagram

Table 48-901: A55_C2_TRCIDR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/NW)	DESIGNER	DESIGNER.. Indicates which company designed the trace unit. The permitted values are: 01000001 ARM Limited. 01000100 Digital Equipment Corporation. 01001101 Motorola, Freescale Semiconductor Inc. 01010001 QUALCOMM Inc. 01010110 Marvell Semiconductor Inc. 01101001 Intel Corporation. All other values are reserved.	
		65	ARM Limited.
		68	Digital Equipment Corporation.
		77	Motorola, Freescale Semiconductor Inc.
		81	QUALCOMM Inc.
		86	Marvell Semiconductor Inc.
		105	Intel Corporation.
23:16 (R/NW)	RES0_TRCIDR1_23_16	0.. Reserved, RES0.	
15:12 (R/NW)	RES1_TRCIDR1_15_12	1.. Reserved, RES1.	
11:8 (R/NW)	TRCARCHMAJ	TRCARCHMAJ.. Indicates the major version of the ETM architecture. The permitted value is: 100 ETMv4. All other values are reserved.	
		4	ETMv4.

Table 48-901: A55_C2_TRCIDR1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:4 (R/NW)	TRCARCHMIN	TRCARCHMIN.. Indicates the minor version of the ETM architecture. The permitted value is: 0 ETMv4 minor version 0. All other values are reserved.	
		0	ETMv4 minor version 0.
3:0 (R/NW)	REVISION	REVISION.. Returns an IMPLEMENTATION DEFINED value that identifies the revision of the trace registers and the OS Save and Restore registers.ARM recommends:That the initial implementation sets REVISION==0x0 and the field then increments for any subsequent implementations. However, it is acceptable to omit some values or use another scheme to identify the revision number.That TRCPIDR2.REVISION==TRCIDR1.REVISION. However, in situations where it is difficult to align these fields, such as with a metal layer fix, then it is acceptable to change the REVISION fields independently.	

Trace ID Register 2.

Returns the maximum size of the data value, data address, VMID, Context ID and instruction address in the trace unit.

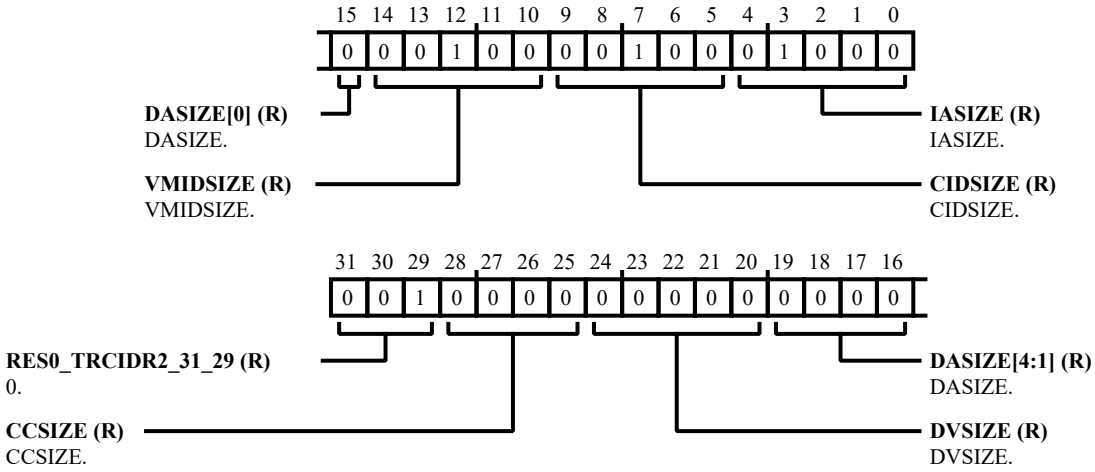

Figure 48-894: A55_C2_TRCIDR2 Register Diagram

Table 48-902: A55_C2_TRCIDR2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:29 (R/NW)	RES0_TRCIDR2_31_29	0.. Reserved, RES0.	
28:25 (R/NW)	CCSIZE	CCSIZE.. Indicates the size of the cycle counter in bits minus 12. 0000 The cycle counter is 12 bits in length. 0001 The cycle counter is 13 bits in length. and so on up to 0b1000, indicating the cycle counter is 20 bits in length.All other values are reserved.If cycle counting is not implemented, as indicated by TRCIDR0.TRCCCI, this field is 0b0000.	
		0	The cycle counter is 12 bits in length.
		1	The cycle counter is 13 bits in length.

Table 48-902: A55_C2_TRCIDR2 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
24:20 (R/NW)	DVSIZE	DVSIZE.. Indicates the data value size in bytes. The permitted values are: 00000 Data value tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00. 00100 Maximum of 32-bit data value size. 01000 Maximum of 64-bit data value size. All other values are reserved.	
		0	Data value tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00.
		4	Maximum of 32-bit data value size.
		8	Maximum of 64-bit data value size.
19:15 (R/NW)	DASIZE	DASIZE.. Indicates the data address size in bytes. The permitted values are: 00000 Data address tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00. 00100 Maximum of 32-bit data address size. 01000 Maximum of 64-bit data address size. All other values are reserved.	
		0	Data address tracing is not supported. Therefore, an implementation must also set TRCIDR0.TRCDATA==0b00.
		4	Maximum of 32-bit data address size.
		8	Maximum of 64-bit data address size.
14:10 (R/NW)	VMIDSIZE	VMIDSIZE.. Indicates the VMID size. The permitted values are: 00000 VMID tracing is not supported. 00001 Maximum of 8-bit VMID size, so TRCCONFIGR.VMID is supported. All other values are reserved.	
		0	VMID tracing is not supported.
		1	Maximum of 8-bit VMID size, so TRCCONFIGR.VMID is supported.
9:5 (R/NW)	CIDSIZE	CIDSIZE.. Indicates the Context ID size. The permitted values are: 00000 Context ID tracing is not supported. 00100 Maximum of 32-bit Context ID size, so TRCCONFIGR.CID is supported. All other values are reserved.	
		0	Context ID tracing is not supported.
		4	Maximum of 32-bit Context ID size, so TRCCONFIGR.CID is supported.

Table 48-902: A55_C2_TRCIDR2 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
4:0 (R/NW)	IASIZE	IASIZE.. Indicates the instruction address size. The permitted values are: 00100 Maximum of 32-bit address size. 01000 Maximum of 64-bit address size. All other values are reserved.	
		4	Maximum of 32-bit address size.
		8	Maximum of 64-bit address size.

Trace ID Register 3.

Indicates the features that the trace unit supports.

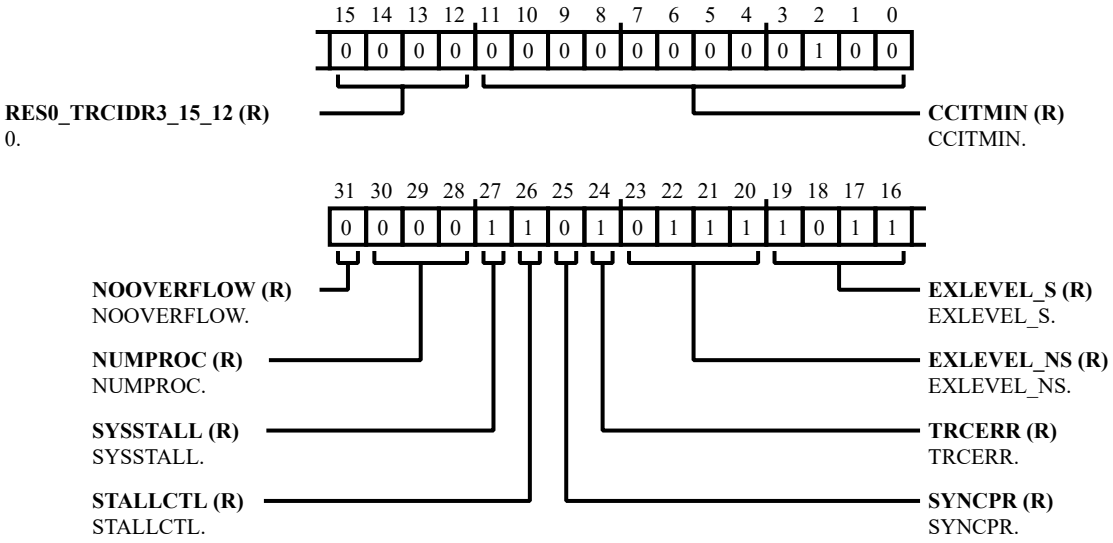

Figure 48-895: A55_C2_TRCIDR3 Register Diagram

Table 48-903: A55_C2_TRCIDR3 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/NW)	NOOVERFLOW	NOOVERFLOW.. Indicates if TRCSTALLCTLR.NOOVERFLOW is supported: 0 TRCSTALLCTLR.NOOVERFLOW is not supported, or STALLCTL==0. 1 TRCSTALLCTLR.NOOVERFLOW is supported.	
		0	TRCSTALLCTLR.NOOVERFLOW is not supported, or STALLCTL==0.
		1	TRCSTALLCTLR.NOOVERFLOW is supported.
30:28 (R/NW)	NUMPROC	NUMPROC.. Indicates the number of processors available for tracing. The possible values are: 000 The trace unit can trace one processor. 001 The trace unit can trace two processors. 010 The trace unit can trace three processors. and so on up to 0b111, which indicates the trace unit can trace eight processors.This field sets the maximum value of TRCPROCSELR.PROCSEL.	
		0	The trace unit can trace one processor.
		1	The trace unit can trace two processors.
		2	The trace unit can trace three processors.

Table 48-903: A55_C2_TRCIDR3 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
27 (R/NW)	SYSSTALL	SYSSTALL.. Indicates if the implementation can support stall control: 0 The system does not support stall control of the processor. 1 The system can support stall control of the processor. The system supports stalling of the processor only when SYSSTALL==1 and STALLCTL==1.	
		0	The system does not support stall control of the processor.
		1	The system can support stall control of the processor.
26 (R/NW)	STALLCTL	STALLCTL.. Indicates if TRCSTALLCTLR is supported: 0 TRCSTALLCTLR is not supported. 1 TRCSTALLCTLR is supported.	
		0	TRCSTALLCTLR is not supported.
		1	TRCSTALLCTLR is supported.
25 (R/NW)	SYNCPR	SYNCPR.. Indicates if an implementation has a fixed synchronization period: 0 TRCSYNCPR is read-write so software can change the synchronization period. 1 TRCSYNCPR is read-only so the synchronization period is fixed.	
		0	TRCSYNCPR is read-write so software can change the synchronization period.
		1	TRCSYNCPR is read-only so the synchronization period is fixed.
24 (R/NW)	TRCERR	TRCERR.. Indicates if TRCVICTLR.TRCERR is supported: 0 TRCVICTLR.TRCERR is not supported 1 TRCVICTLR.TRCERR is supported.	
		0	TRCVICTLR.TRCERR is not supported.
		1	TRCVICTLR.TRCERR is supported.

Table 48-903: A55_C2_TRCIDR3 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:20 (R/NW)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit indicates whether instruction tracing is supported for the corresponding exception level: 0 In Non-secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are not supported. 1 In Non-secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are supported. The exception levels are:Bit[20]Exception level 0.Bit[21]Exception level 1.Bit[22]Exception level 2.Bit[23]SBZ. EXLEVEL_NS[3] is never implemented.	
		0	In Non-secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are not supported.
		1	In Non-secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_NS and TRCVICTLR.EXLEVEL_NS are supported.
19:16 (R/NW)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit indicates whether instruction tracing is supported for the corresponding exception level: 0 In Secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are not supported. 1 In Secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are supported. The exception levels are:Bit[16]Exception level 0.Bit[17]Exception level 1.Bit[18]SBZ. EXLEVEL_S[2] is never implemented.Bit[19]Exception level 3.	
		0	In Secure state, exception level n is not supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are not supported.
		1	In Secure state, exception level n is supported so the corresponding bits in TRCACATRn.EXLEVEL_S and TRCVICTLR.EXLEVEL_S are supported.
15:12 (R/NW)	RES0_TRCIDR3_15_12	0.. Reserved, RES0.	
11:0 (R/NW)	CCITMIN	CCITMIN.. Indicates the minimum value that can be programmed in TRCCCCTLR.THRESHOLD.When cycle counting in the instruction trace is supported, that is TRCIDR0.TRCCCI==1, then the minimum value of this field is 0x001, otherwise it is 0x000.	

Trace ID Register 4.

Returns how many resources the trace unit supports.

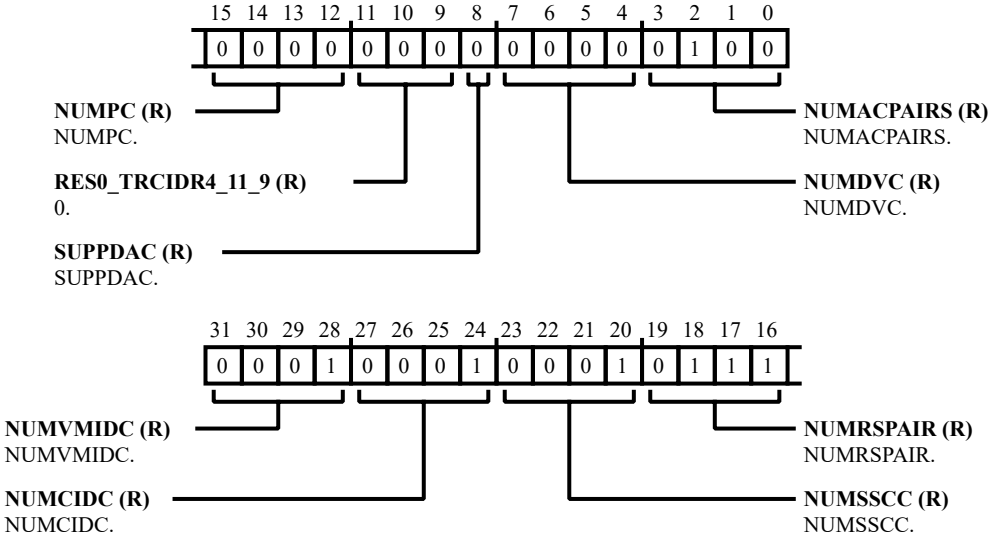

Figure 48-896: A55_C2_TRCIDR4 Register Diagram

Table 48-904: A55_C2_TRCIDR4 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:28 (R/NW)	NUMVMIDC	NUMVMIDC.. Indicates the number of VMID comparators that are available for tracing. The permitted values are: 0000 No VMID comparators are available. 0001 The implementation has one VMID comparator. 0010 The implementation has two VMID comparators. and so on up to 0b1000, which indicates that the implementation has eight VMID comparators.All other values are reserved.	
		0	No VMID comparators are available.
		1	The implementation has one VMID comparator.
		2	The implementation has two VMID comparators.
27:24 (R/NW)	NUMCIDC	NUMCIDC.. Indicates the number of Context ID comparators that are available for tracing. The permitted values are: 0000 No Context ID comparators are available. 0001 The implementation has one Context ID comparator. 0010 The implementation has two Context ID comparators. and so on up to 0b1000, which indicates that the implementation has eight Context ID comparators.All other values are reserved.	
		0	No Context ID comparators are available.
		1	The implementation has one Context ID comparator.
		2	The implementation has two Context ID comparators.

Table 48-904: A55_C2_TRCIDR4 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:20 (R/NW)	NUMSSCC	NUMSSCC.. Indicates the number of single-shot comparator controls that are available for tracing. The permitted values are: 0000 No single-shot comparator controls are available. 0001 The implementation has one single-shot comparator control. 0010 The implementation has two single-shot comparator controls. and so on up to 0b1000, which indicates that the implementation has eight single-shot comparator controls.All other values are reserved.	
		0	No single-shot comparator controls are available.
		1	The implementation has one single-shot comparator control.
		2	The implementation has two single-shot comparator controls.
19:16 (R/NW)	NUMRSPAIR	NUMRSPAIR.. Indicates the number of resource selection pairs that are available for tracing. The permitted values are: 0000 The implementation has one resource selection pair. 0001 The implementation has two resource selection pairs. 0010 The implementation has three resource selection pairs. and so on up to 0b1111, which indicates that the implementation has 16 resource selection pairs.Implementations always have at least one resource selection pair so that they can support the FALSE and TRUE resource selectors, 0 and 1.	
		0	The implementation has one resource selection pair.
		1	The implementation has two resource selection pairs.
		2	The implementation has three resource selection pairs.
15:12 (R/NW)	NUMPC	NUMPC.. Indicates the number of processor comparator inputs that are available for tracing. The permitted values are: 0000 No processor comparator inputs are available. 0001 The implementation has one processor comparator input. 0010 The implementation has two processor comparator inputs. and so on up to 0b1000, which indicates that the implementation has eight processor comparator inputs.All other values are reserved.	
		0	No processor comparator inputs are available.
		1	The implementation has one processor comparator input.
		2	The implementation has two processor comparator inputs.
11:9 (R/NW)	RES0_TRCIDR4_11_9	0.. Reserved, RES0.	

Table 48-904: A55_C2_TRCIDR4 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
8 (R/NW)	SUPPDAC	SUPPDAC.. Indicates if the implementation can support data address comparisons: 0 The implementation does not support data address comparisons. 1 The implementation can support data address comparisons.	
		0	The implementation does not support data address comparisons.
		1	The implementation can support data address comparisons.
7:4 (R/NW)	NUMDVC	NUMDVC.. Indicates the number of data value comparators that are available for tracing. The permitted values are: 0000 No data value comparators are available. 0001 The implementation has one data value comparator. 0010 The implementation has two data value comparators. and so on up to 0b1000, which indicates that the implementation has eight data value comparators.All other values are reserved.	
		0	No data value comparators are available.
		1	The implementation has one data value comparator.
		2	The implementation has two data value comparators.
3:0 (R/NW)	NUMACPAIRS	NUMACPAIRS.. Indicates the number of address comparator pairs that are available for tracing. The permitted values are: 0000 No address comparator pairs are available. 0001 The implementation has one address comparator pair. 0010 The implementation has two address comparator pairs. and so on up to 0b1000, which indicates that the implementation has eight address comparator pairs.All other values are reserved.	
		0	No address comparator pairs are available.
		1	The implementation has one address comparator pair.
		2	The implementation has two address comparator pairs.

Trace ID Register 5.

Indicates the features that the trace unit supports.

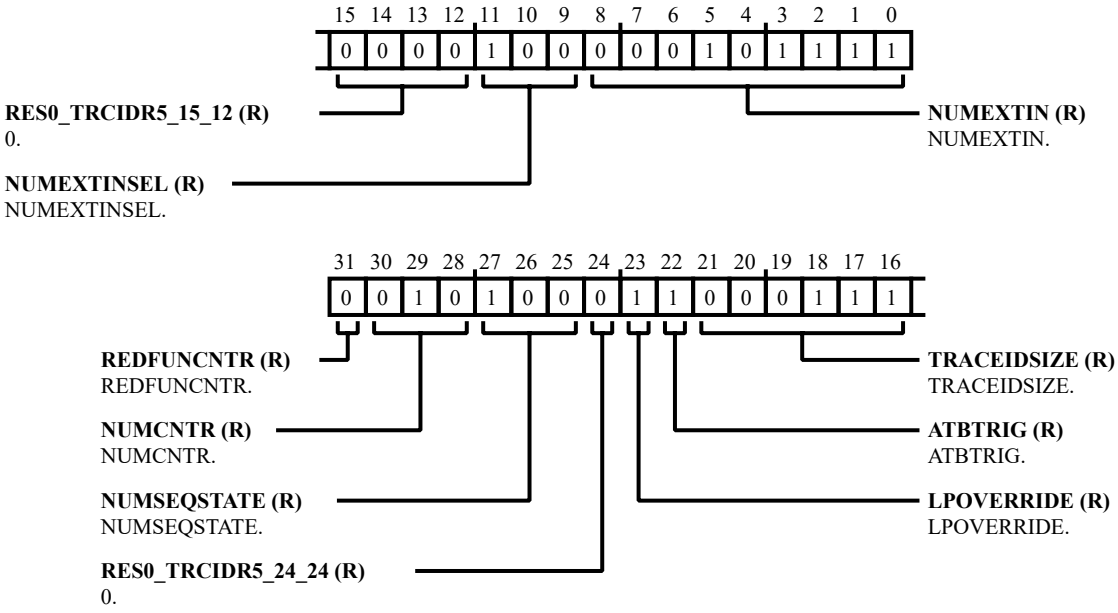

Figure 48-897: A55_C2_TRCIDR5 Register Diagram

Table 48-905: A55_C2_TRCIDR5 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/NW)	REDFUNCNTR	REDFUNCNTR.. Indicates if the reduced function counter is implemented: 0 The reduced function counter is not supported. 1 Counter 0 is implemented as a reduced function counter.	
		0	The reduced function counter is not supported.
		1	Counter 0 is implemented as a reduced function counter.
30:28 (R/NW)	NUMCNTR	NUMCNTR.. Indicates the number of counters that are available for tracing. The permitted values are: 000 No counters are available. 001 The implementation has one counter. 010 The implementation has two counters. 011 The implementation has three counters. 100 The implementation has four counters. All other values are reserved.	
		0	No counters are available.
		1	The implementation has one counter.
		2	The implementation has two counters.
		3	The implementation has three counters.

Table 48-905: A55_C2_TRCIDR5 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
		4	The implementation has four counters.
27:25 (R/NW)	NUMSEQSTATE	NUMSEQSTATE.. Indicates the number of sequencer states that are implemented. The permitted values are: 000 No sequencer states are implemented. 100 The implementation has four sequencer states. All other values are reserved.	
		0	No sequencer states are implemented.
		4	The implementation has four sequencer states.
24 (R/NW)	RES0_TRCIDR5_24_24	0.. Reserved, RES0.	
23 (R/NW)	LPOVERRIDE	LPOVERRIDE.. Indicates if the implementation can support low-power state override: 0 The implementation does not support low-power state override. 1 The implementation supports low-power state override, and the TRCEVENTCTL1R.LPOVERRIDE field is implemented. The trace unit must support low-power state override if it can enter a low-power mode where the resources and event trace generation are disabled.	
		0	The implementation does not support low-power state override.
		1	The implementation supports low-power state override, and the TRCEVENTCTL1R.LPOVERRIDE field is implemented.
22 (R/NW)	ATBTRIG	ATBTRIG.. Indicates if the implementation can support ATB triggers: 0 The implementation does not support ATB triggers. 1 The implementation supports ATB triggers, and the TRCEVENTCTL1R.ATBTRIG field is implemented.	
		0	The implementation does not support ATB triggers.
		1	The implementation supports ATB triggers, and the TRCEVENTCTL1R.ATBTRIG field is implemented.
21:16 (R/NW)	TRACEIDSIZE	TRACEIDSIZE.. Indicates the trace ID width. The permitted value is: 111 The implementation supports a 7-bit trace ID. This sets the width of the TRCTRACEIDR.TRACEID field. All other values are reserved.The CoreSight ATB requires a 7-bit trace ID width.	
		7	The implementation supports a 7-bit trace ID. This sets the width of the TRCTRACEIDR.TRACEID field.
15:12 (R/NW)	RES0_TRCIDR5_15_12	0.. Reserved, RES0.	

Table 48-905: A55_C2_TRCIDR5 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
11:9 (R/NW)	NUMEXTINSEL	NUMEXTINSEL.. Indicates how many external input select resources are implemented. The permitted values are: 000 No external input select resources are available. If NUMEXTINSEL is zero, NUMEXTIN must also be zero. 001 The implementation has one external input select resource. 010 The implementation has two external input select resources. 011 The implementation has three external input select resources. 100 The implementation has four external input select resources. All other values are reserved.See TRCEXTINSELR for how to select an input select resource.	
		0	No external input select resources are available. If NUMEXTINSEL is zero, NUMEXTIN must also be zero.
		1	The implementation has one external input select resource.
		2	The implementation has two external input select resources.
		3	The implementation has three external input select resources.
		4	The implementation has four external input select resources.
8:0 (R/NW)	NUMEXTIN	NUMEXTIN.. Indicates how many external inputs are implemented. The permitted values are: 000000000 No external inputs are available. If NUMEXTIN is zero, NUMEXTINSEL must also be zero. 000000001 The implementation has one external input. 000000010 The implementation has two external inputs. and so on up to 0b100000000, which indicates that the implementation has 256 external inputs.All other values >0b100000000 are reserved.See TRCEXTINSELR for how to select an external input.	
		0	No external inputs are available. If NUMEXTIN is zero, NUMEXTINSEL must also be zero.
		1	The implementation has one external input.
		2	The implementation has two external inputs.

Trace IMPLEMENTATION DEFINED Register 0.

TRCIMSPEC0 shows the presence of any IMPLEMENTATION DEFINED features, and provides an interface to enable the features that are provided. The TRCIMSPECn registers are reserved for the future implementation of up to eight IMPLEMENTATION DEFINED registers. When a trace unit does not implement these registers, TRCIMSPEC0 must still be partially implemented so that a debugger can implement a general mechanism for detecting the IMPLEMENTATION DEFINED registers.

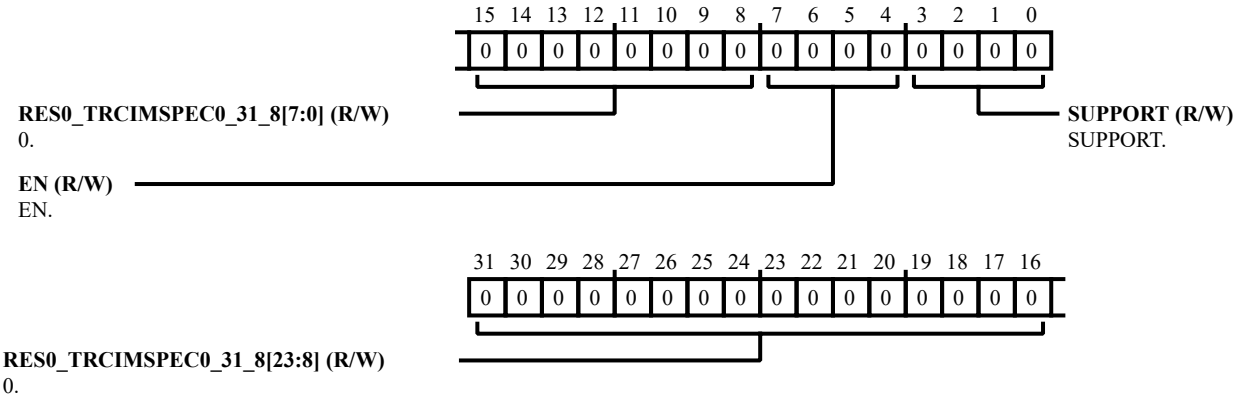

Figure 48-898: A55_C2_TRCIMSPEC0 Register Diagram

Table 48-906: A55_C2_TRCIMSPEC0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:8 (R/W)	RES0_TRCIM-SPEC0_31_8	0.. Reserved, RES0.	
7:4 (R/W)	EN	EN.. If SUPPORT is not 0b0000, controls whether the IMPLEMENTATION DEFINED features are enabled. The permitted values are: 0000 The IMPLEMENTATION DEFINED features are not enabled. The trace unit must behave as if the IMPLEMENTATION DEFINED features are not supported. and any other value, which indicates that the trace unit behavior is IMPLEMENTATION DEFINED.If SUPPORT is 0b0000, this field is RES0.	
		0	The IMPLEMENTATION DEFINED features are not enabled. The trace unit must behave as if the IMPLEMENTATION DEFINED features are not supported.

Table 48-906: A55_C2_TRCIMSPEC0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
3:0 (R/W)	SUPPORT	SUPPORT.. Indicates whether the implementation supports IMPLEMENTATION DEFINED features. The permitted values are: 0000 No IMPLEMENTATION DEFINED features are supported. The EN field is RES0. and any other value, which indicates that IMPLEMENTATION DEFINED features are supported. Use of these values requires written permission from ARM.	
		0	No IMPLEMENTATION DEFINED features are supported. The EN field is RES0.

Integration ATB Identification Register.

Integration ATB Identification Register.

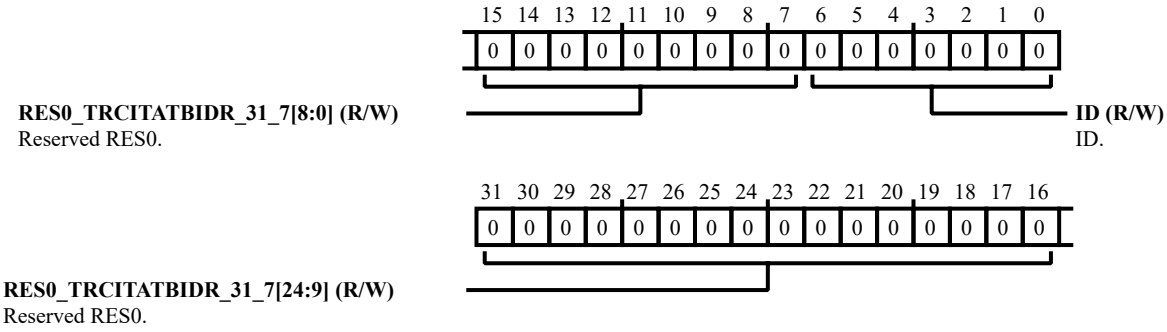

Figure 48-899: A55_C2_TRCITATBIDR Register Diagram

Table 48-907: A55_C2_TRCITATBIDR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:7 (R/W)	RES0_TRCITAT-BIDR_31_7	Reserved RES0.. Reserved RES0.
		0
6:0 (R/W)	ID	ID.. Drives the ATIDMn[6:0] output pins.

Trace Integration Mode Control Register.

Controls whether the trace unit is in integration mode.

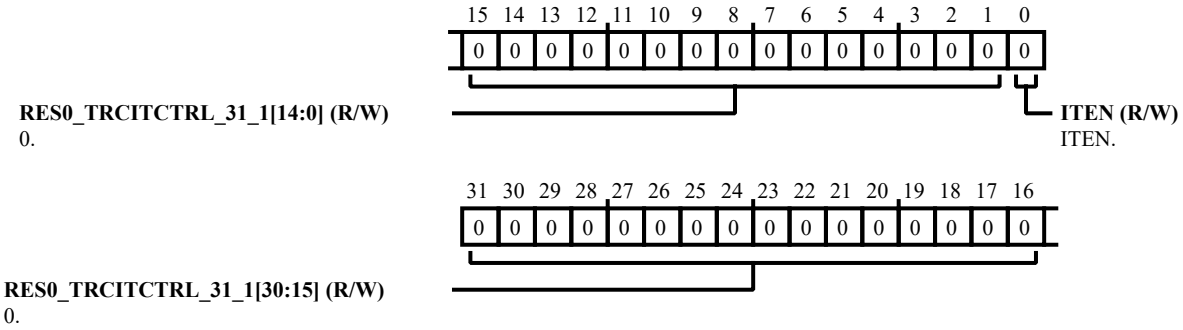

Figure 48-900: A55_C2_TRCITCTRL Register Diagram

Table 48-908: A55_C2_TRCITCTRL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_TRCITCTRL_31_1	0.. Reserved, RES0.	
0 (R/W)	ITEN	ITEN.. Integration mode enable bit: 0 The trace unit is not in integration mode. 1 The trace unit is in integration mode. This mode enables a debug agent to perform topology detection, and System-on-Chip (SoC) test software to perform integration testing.	
		0	The trace unit is not in integration mode.
		1	The trace unit is in integration mode. This mode enables a debug agent to perform topology detection, and System-on-Chip (SoC) test software to perform integration testing.

Integration Instruction ATB In Register.

Integration Instruction ATB In Register.

Bit No. (Access)	Bit Name	Description/Enumeration
31:2 (R/NW)	RESERVED_TRCITIAT-BINR_31_2	RESERVED.. Reserved. Read undefined.
1 (R/NW)	AFVALIDM	AFVALIDM.. Returns the value of the AFVALIDMn input pin.
0 (R/NW)	ATREADYM	ATREADYM.. Returns the value of the ATREADYMn input pin.

Integration Instruction ATB Out Register.

Integration Instruction ATB Out Register.

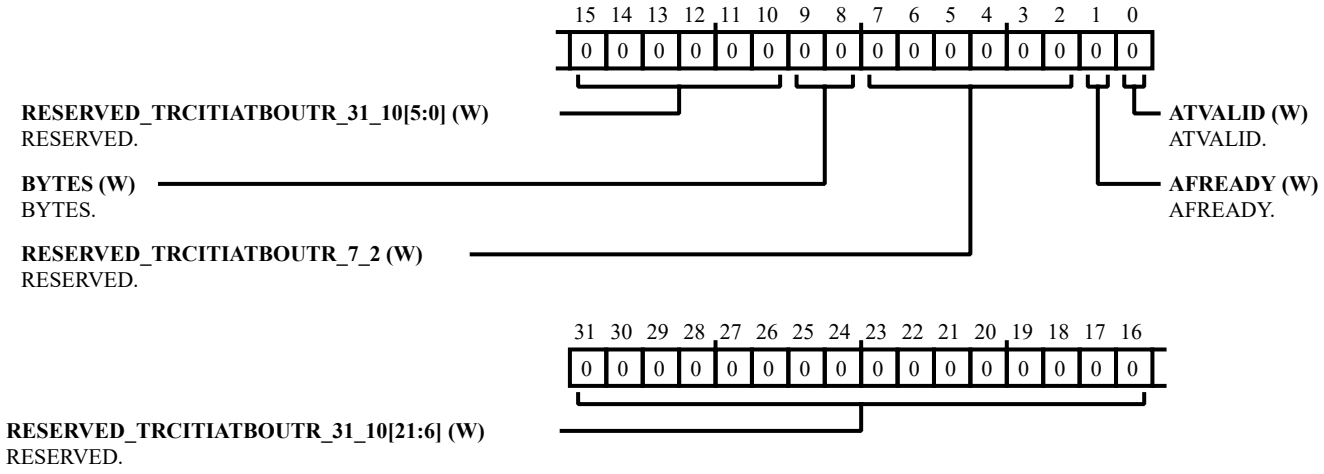

Figure 48-902: A55_C2_TRCITIATBOUTR Register Diagram

Table 48-910: A55_C2_TRCITIATBOUTR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:10 (RX/W)	RESERVED_TRCITIAT-BOUTR_31_10	RESERVED.. Reserved. Read undefined.
9:8 (RX/W)	BYTES	BYTES.. Drives the ATBYTESMn[1:0] output pins.
7:2 (RX/W)	RESERVED_TRCITIAT-BOUTR_7_2	RESERVED.. Reserved. Read undefined.
1 (RX/W)	AFREADY	AFREADY.. Drives the AFREADYMn output pin.
0 (RX/W)	ATVALID	ATVALID.. Drives the ATVALIDMn output pin.

Integration Instruction ATB Data Register.

Integration Instruction ATB Data Register.

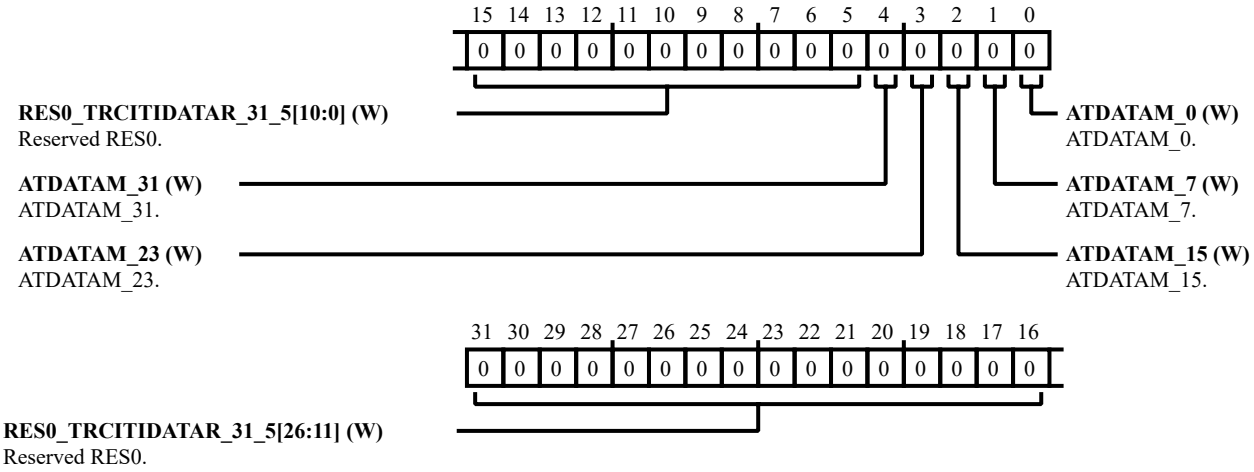

Figure 48-903: A55_C2_TRCITIDATAR Register Diagram

Table 48-911: A55_C2_TRCITIDATAR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:5 (RX/W)	RES0_TRCITIDA-TAR_31_5	Reserved RES0.. Reserved RES0.	
		0	Reserved.
4 (RX/W)	ATDATAM_31	ATDATAM_31.. Drives the ATDATAM[31] output.	
3 (RX/W)	ATDATAM_23	ATDATAM_23.. Drives the ATDATAM[23] output.	
2 (RX/W)	ATDATAM_15	ATDATAM_15.. Drives the ATDATAM[15] output.	
1 (RX/W)	ATDATAM_7	ATDATAM_7.. Drives the ATDATAM[7] output.	
0 (RX/W)	ATDATAM_0	ATDATAM_0.. Drives the ATDATAM[0] output.	

Trace OS Lock Access Register.

Controls whether the OS Lock is locked.

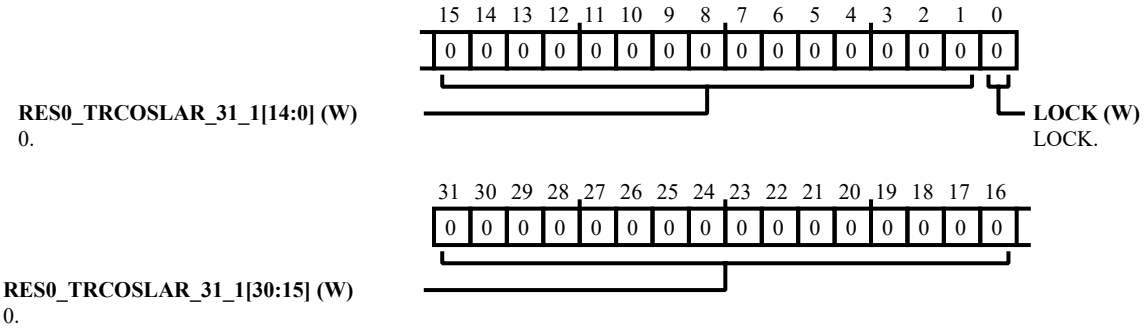

Figure 48-904: A55_C2_TRCOSLAR Register Diagram

Table 48-912: A55_C2_TRCOSLAR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (RX/W)	RES0_TRCOSLAR_31_1	0.. Reserved, RES0.	
0 (RX/W)	LOCK	LOCK.. OS Lock control bit: 0 Unlocks the OS Lock. 1 Locks the OS Lock. This setting disables the trace unit.	
		0	Unlocks the OS Lock.
		1	Locks the OS Lock. This setting disables the trace unit.

Trace OS Lock Status Register.

Returns the status of the OS Lock.

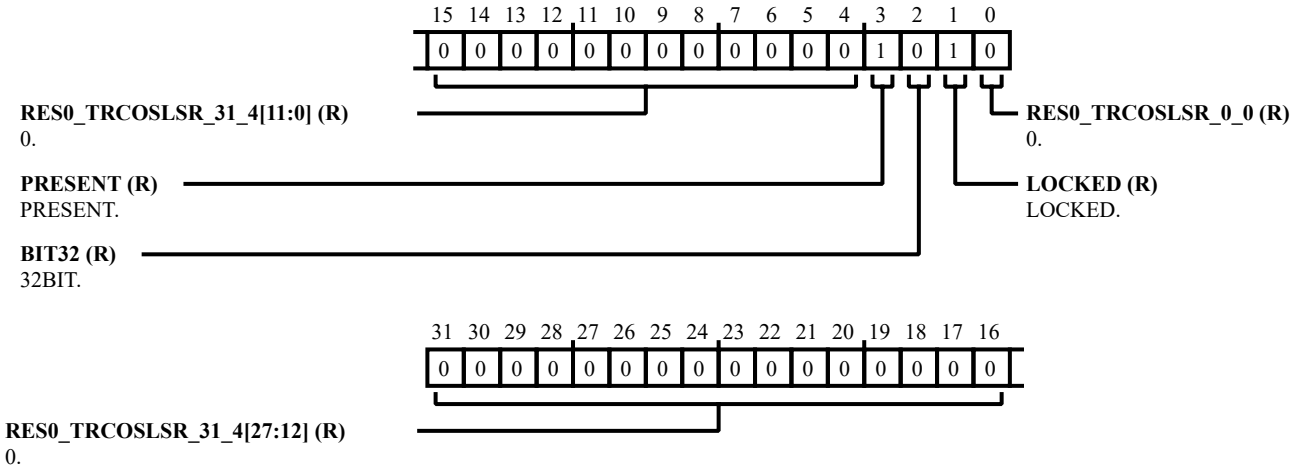

Figure 48-905: A55_C2_TRCOSLSR Register Diagram

Table 48-913: A55_C2_TRCOSLSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:4 (R/NW)	RES0_TRCOSLSR_31_4	0.. Reserved, RES0.	
3 (R/NW)	PRESENT	PRESENT.. Indicates whether the OS Lock is implemented.This bit is RES1, which indicates that the OS Lock is always implemented.	
2 (R/NW)	BIT32	32BIT.. This bit is RES0, which indicates that software must perform a 32-bit write to update the TRCOSLAR.	
1 (R/NW)	LOCKED	LOCKED.. OS Lock status bit: 0 The OS Lock is unlocked. 1 The OS Lock is locked. When the trace unit core power domain is powered down the value is UNKNOWN. The TRCPDSR indicates if the trace unit core power domain is powered down.	
		0	The OS Lock is unlocked.
		1	The OS Lock is locked.
0 (R/NW)	RES0_TRCOSLSR_0_0	0.. Reserved, RES0.	

Trace PowerDown Status Register.

Returns information about the OS Lock status, core power domain status and power interruption status for the trace unit.

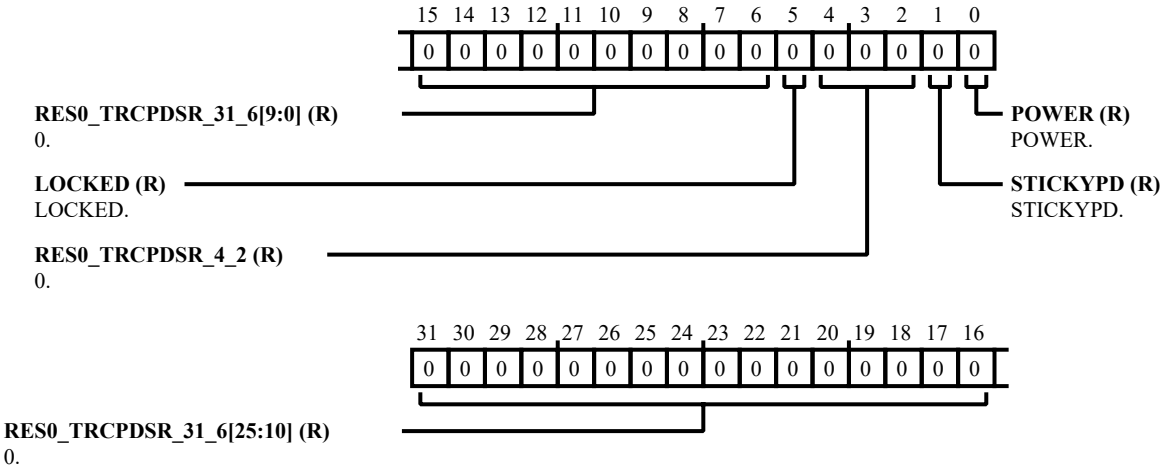

Figure 48-906: A55_C2_TRCPDSR Register Diagram

Table 48-914: A55_C2_TRCPDSR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:6 (R/NW)	RES0_TRCPDSR_31_6	0.. Reserved, RES0.	
5 (R/NW)	LOCKED	LOCKED.. OS Lock status bit: 0 The OS Lock is unlocked. 1 The OS Lock is locked. The value is UNKNOWN when the trace unit core power domain is powered down, that is, when POWER==0.	
		0	The OS Lock is unlocked.
		1	The OS Lock is locked.
4:2 (R/NW)	RES0_TRCPDSR_4_2	0.. Reserved, RES0.	

Table 48-914: A55_C2_TRCPDSR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/NW)	STICKYPD	STICKYPD.. Sticky powerdown status bit. Indicates whether the trace register state is valid: 0 If POWER==1 then the state of TRCOSLSR and the trace registers are valid. If POWER==0 then it is UNKNOWN whether the state of TRCOSLSR and the trace registers are valid. 1 The state of TRCOSLSR and the trace registers might not be valid. The trace unit sets this bit to 1 if either the trace unit is reset, or the power to the trace unit core power domain is removed and the trace register state is not valid. After this register is read, if the Software Lock is unlocked and the trace unit core power domain is powered up, then the trace unit sets this bit to 0. The TRCLAR controls whether the Software Lock is locked.	
		0	If POWER==1 then the state of TRCOSLSR and the trace registers are valid. If POWER==0 then it is UNKNOWN whether the state of TRCOSLSR and the trace registers are valid.
		1	The state of TRCOSLSR and the trace registers might not be valid. The trace unit sets this bit to 1 if either the trace unit is reset, or the power to the trace unit core power domain is removed and the trace register state is not valid.
0 (R/NW)	POWER	POWER.. Power status bit: 0 The trace unit core power domain is not powered. The trace registers are not accessible and they all return an error response. 1 The trace unit core power domain is powered. The trace registers are accessible.	
		0	The trace unit core power domain is not powered. The trace registers are not accessible and they all return an error response.
		1	The trace unit core power domain is powered. The trace registers are accessible.

Trace Programming Control Register.

Enables the trace unit.

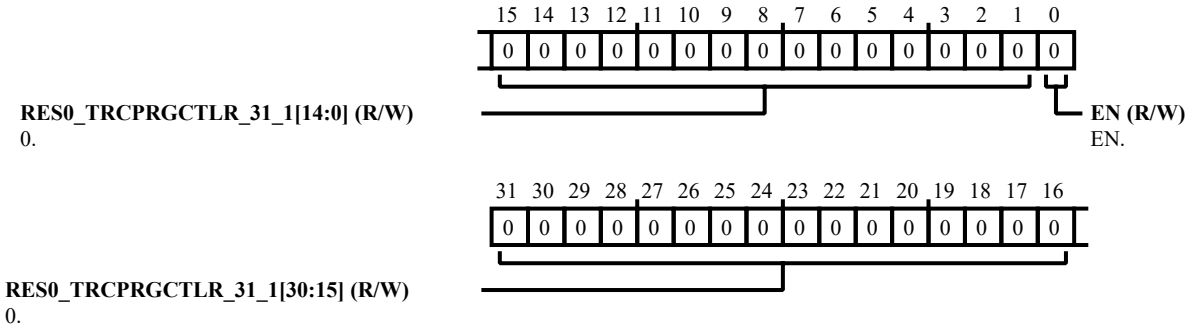

Figure 48-907: A55_C2_TRCPRGCTLR Register Diagram

Table 48-915: A55_C2_TRCPRGCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_TRCPRGCTLR_31_1	0.. Reserved, RES0.	
0 (R/W)	EN	EN.. Trace unit enable bit. Possible values are: 0 The trace unit is disabled. All trace resources are inactive and no trace is generated. 1 The trace unit is enabled.	
		0	The trace unit is disabled. All trace resources are inactive and no trace is generated.
		1	The trace unit is enabled.

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

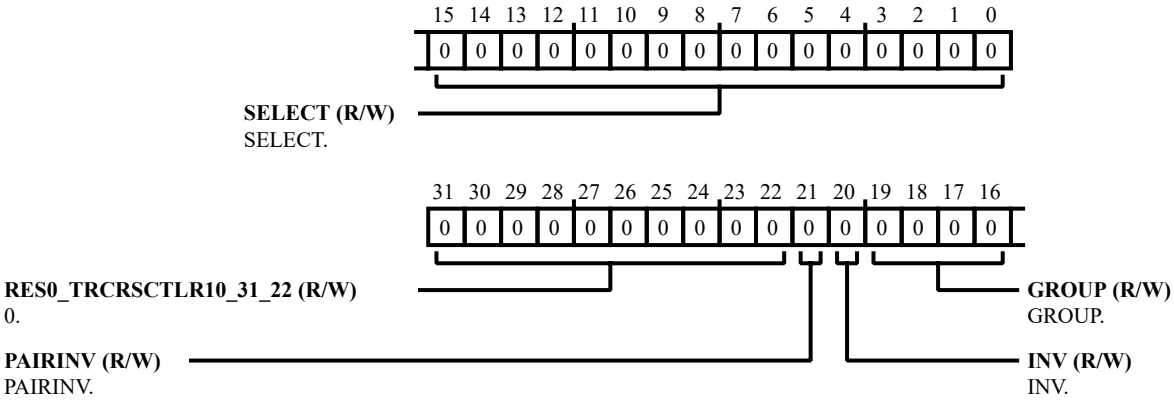

Figure 48-908: A55_C2_TRCRSCTLR10 Register Diagram

Table 48-916: A55_C2_TRCRSCTLR10 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR10_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-916: A55_C2_TRCRSCTLR10 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

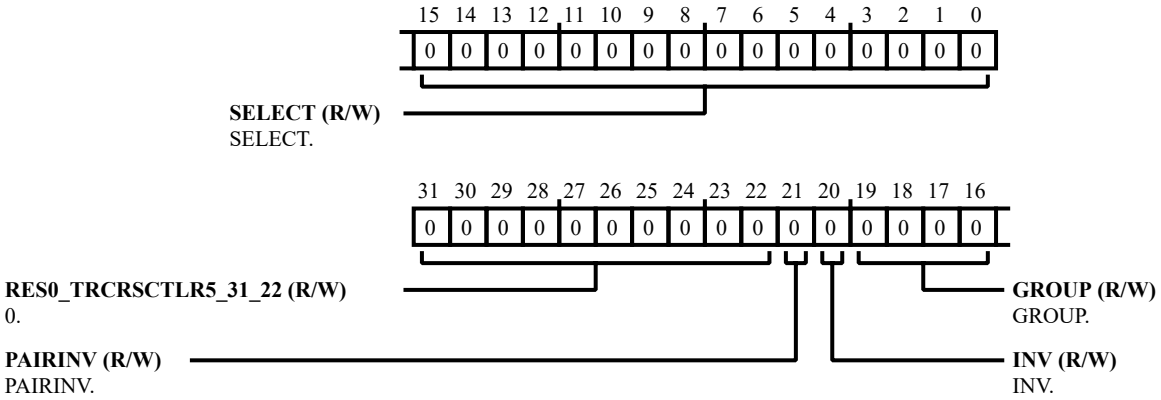

Figure 48-917: A55_C2_TRCRSCTLR5 Register Diagram

Table 48-925: A55_C2_TRCRSCTLR5 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR5_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-925: A55_C2_TRCRSCTLR5 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

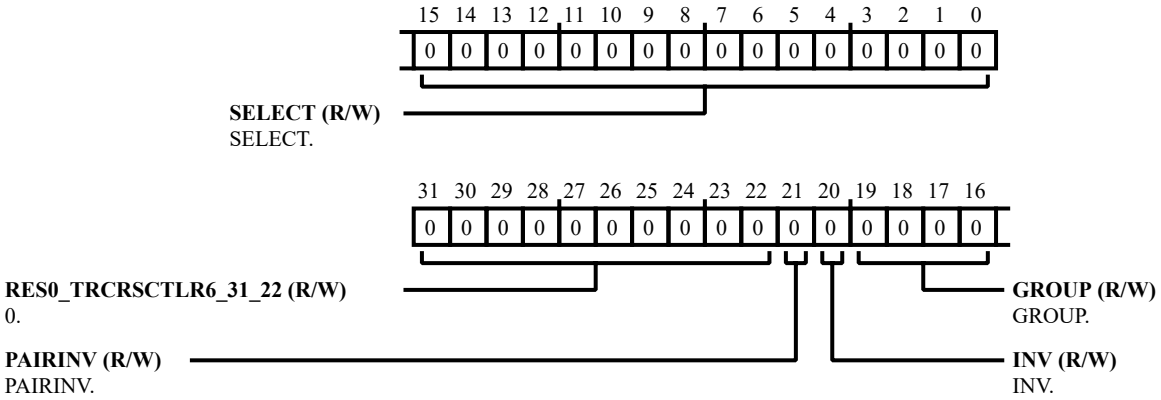

Figure 48-918: A55_C2_TRCRSCTLR6 Register Diagram

Table 48-926: A55_C2_TRCRSCTLR6 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR6_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-926: A55_C2_TRCRSCTLR6 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

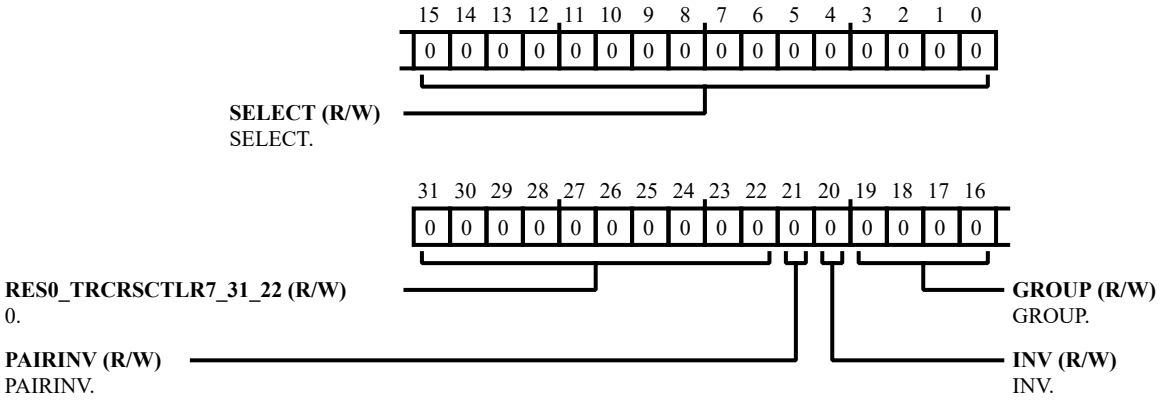

Figure 48-919: A55_C2_TRCRSCTLR7 Register Diagram

Table 48-928: A55_C2_TRCRSCTLR8 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Resource Selection Control Registers.

Controls the selection of the resources in the trace unit.

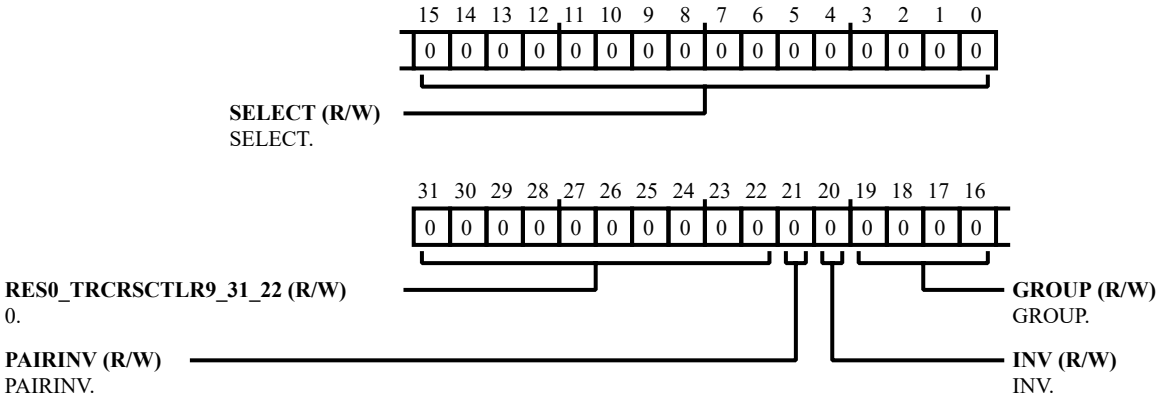

Figure 48-921: A55_C2_TRCRSCTLR9 Register Diagram

Table 48-929: A55_C2_TRCRSCTLR9 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:22 (R/W)	RES0_TRCRSCTLR9_31_22	0.. Reserved, RES0.	
21 (R/W)	PAIRINV	PAIRINV.. If n is an even number, controls whether the combined result from a resource pair is inverted: 0 The combined result is not inverted. 1 The combined result is inverted. If n is an odd number, this field is RES0.	
		0	The combined result is not inverted.
		1	The combined result is inverted.
20 (R/W)	INV	INV.. Controls whether the resource that GROUP and SELECT selects is inverted: 0 The selected resource is not inverted. 1 The selected resource is inverted.	
		0	The selected resource is not inverted.
		1	The selected resource is inverted.

Table 48-929: A55_C2_TRCRSCTLR9 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	GROUP	GROUP.. Selects a group of resources. Possible values are: 0000 For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved. 0001 For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved. 0010 For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved. 0011 For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved. 0100 For SELECT bits 0 to 15, selects single address comparator 0 to 15. 0101 For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved. 0110 For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved. 0111 For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved. All other values are reserved.	
		0	For SELECT bits 0 to 3, selects external input selector 0 to 3; other bits are reserved.
		1	For SELECT bits 0 to 7, selects processor comparator inputs 0 to 7; other bits are reserved.
		2	For SELECT bits 0 to 3, selects counter at zero 0 to 3; for SELECT bits 4 to 7, selects sequencer states 0 to 3; other bits are reserved.
		3	For SELECT bits 0 to 7, selects single-shot comparator control 0 to 7; other bits are reserved.
		4	For SELECT bits 0 to 15, selects single address comparator 0 to 15.
		5	For SELECT bits 0 to 7, selects address range comparator 0 to 7; other bits are reserved.
		6	For SELECT bits 0 to 7, selects Context ID comparator 0 to 7; other bits are reserved.
		7	For SELECT bits 0 to 7, selects VMID comparator 0 to 7; other bits are reserved.
15:0 (R/W)	SELECT	SELECT.. Selects one or more resources from the group that the GROUP field selects. Each bit represents a resource from the selected group.See the GROUP field description for details.	

Trace Sequencer State Transition Control Registers.

Moves the sequencer state backwards (from state n+1 to state n) when a programmed event occurs, and forwards (from state n to state n+1) when a programmed event occurs.

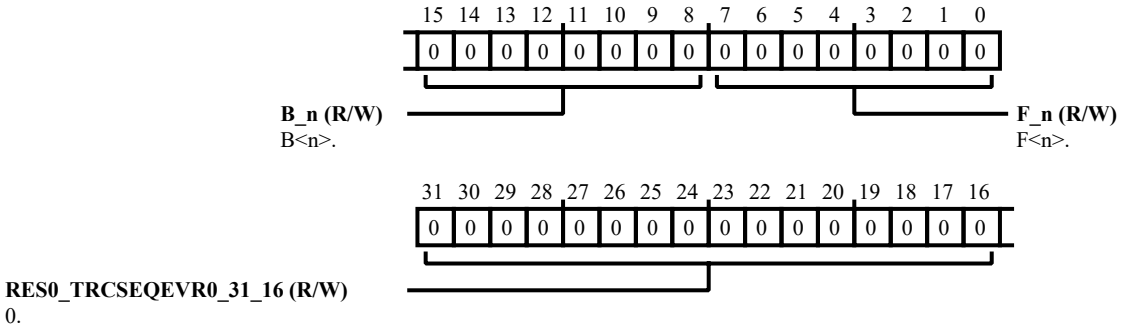

Figure 48-922: A55_C2_TRCSEQEVR0 Register Diagram

Table 48-930: A55_C2_TRCSEQEVR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCSE-QEVR0_31_16	0.. Reserved, RES0.
15:8 (R/W)	B_N	B<n>.. Backward field. Contains an event number. When the event occurs then the sequencer state moves from state n+1 to state n.For example, for TRCSEQEVR2, if B2==0x14 then when event 0x14 occurs, the sequencer moves from state 3 to state 2.
7:0 (R/W)	F_N	F<n>.. Forward field. Contains an event number. When the event occurs then the sequencer state moves from state n to state n+1.For example, for TRCSEQEVR1, if F1==0x12 then when event 0x12 occurs, the sequencer moves from state 1 to state 2.

Trace Sequencer State Transition Control Registers.

Moves the sequencer state backwards (from state n+1 to state n) when a programmed event occurs, and forwards (from state n to state n+1) when a programmed event occurs.

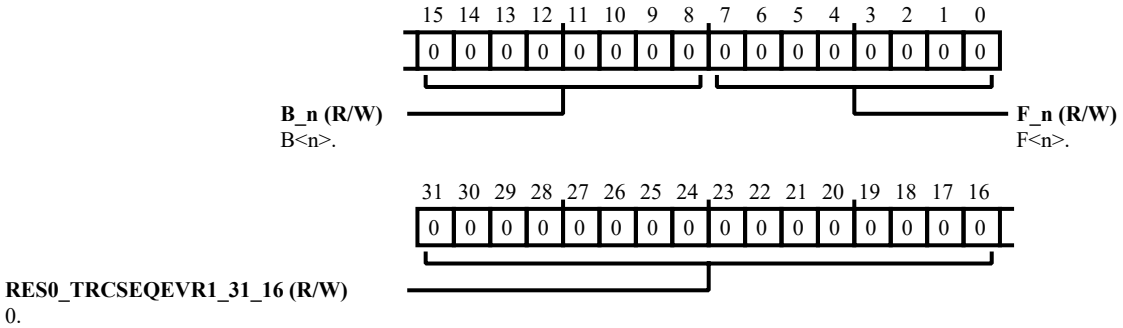

Figure 48-923: A55_C2_TRCSEQEVR1 Register Diagram

Table 48-931: A55_C2_TRCSEQEVR1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCSE-QEVR1_31_16	0.. Reserved, RES0.
15:8 (R/W)	B_N	B<n>.. Backward field. Contains an event number. When the event occurs then the sequencer state moves from state n+1 to state n.For example, for TRCSEQEVR2, if B2==0x14 then when event 0x14 occurs, the sequencer moves from state 3 to state 2.
7:0 (R/W)	F_N	F<n>.. Forward field. Contains an event number. When the event occurs then the sequencer state moves from state n to state n+1.For example, for TRCSEQEVR1, if F1==0x12 then when event 0x12 occurs, the sequencer moves from state 1 to state 2.

Trace Sequencer State Transition Control Registers.

Moves the sequencer state backwards (from state n+1 to state n) when a programmed event occurs, and forwards (from state n to state n+1) when a programmed event occurs.

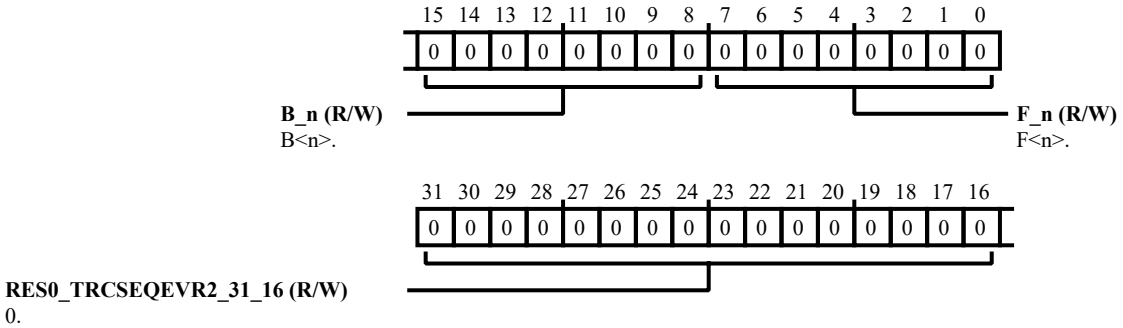

Figure 48-924: A55_C2_TRCSEQEVR2 Register Diagram

Table 48-932: A55_C2_TRCSEQEVR2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	RES0_TRCSE-QEVR2_31_16	0.. Reserved, RES0.
15:8 (R/W)	B_N	B<n>.. Backward field. Contains an event number. When the event occurs then the sequencer state moves from state n+1 to state n.For example, for TRCSEQEVR2, if B2==0x14 then when event 0x14 occurs, the sequencer moves from state 3 to state 2.
7:0 (R/W)	F_N	F<n>.. Forward field. Contains an event number. When the event occurs then the sequencer state moves from state n to state n+1.For example, for TRCSEQEVR1, if F1==0x12 then when event 0x12 occurs, the sequencer moves from state 1 to state 2.

Trace Sequencer Reset Control Register.

Moves the sequencer to state 0 when a programmed event occurs.

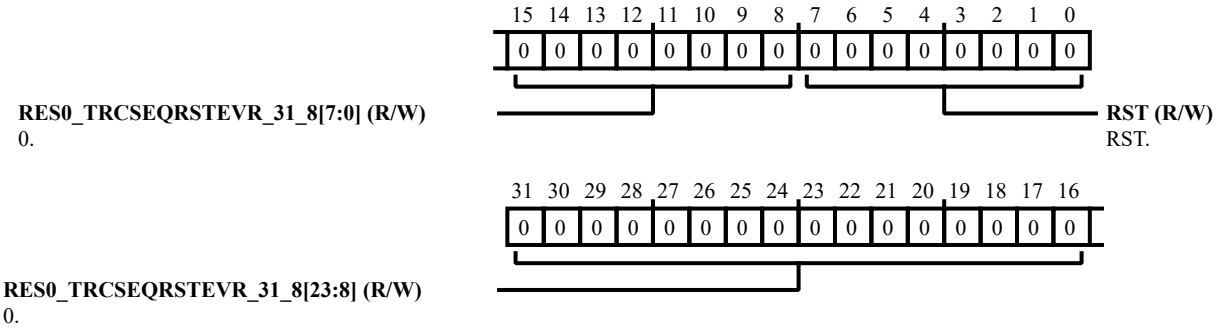

Figure 48-925: A55_C2_TRCSEQRSTEVR Register Diagram

Table 48-933: A55_C2_TRCSEQRSTEVR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_TRCSEQR-STEVR_31_8	0.. Reserved, RES0.
7:0 (R/W)	RST	RST.. Contains an event number. When the event occurs then the sequencer state moves to state 0.

Trace Sequencer State Register.

Use this to set, or read, the sequencer state.

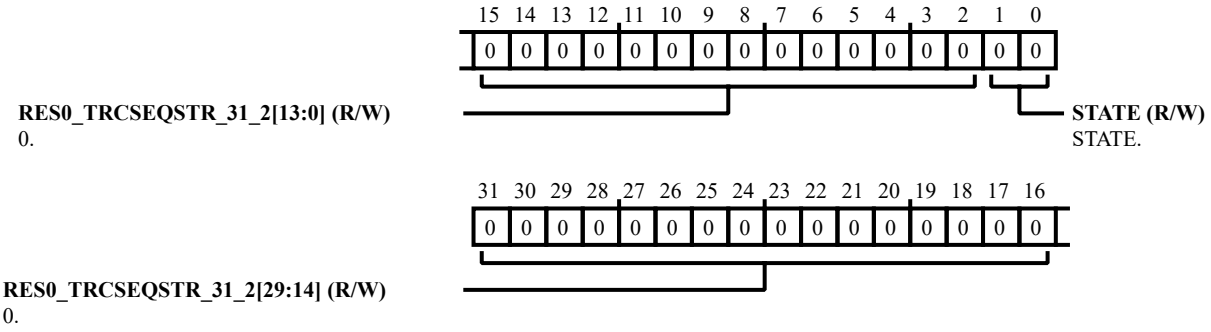

Figure 48-926: A55_C2_TRCSEQSTR Register Diagram

Table 48-934: A55_C2_TRCSEQSTR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:2 (R/W)	RES0_TRCSEQSTR_31_2	0.. Reserved, RES0.	
1:0 (R/W)	STATE	STATE.. Sets or returns the state of the sequencer: 00 State 0. 01 State 1. 10 State 2. 11 State 3.	
		0	State 0.
		1	State 1.
		2	State 2.
		3	State 3.

Trace Single-Shot Comparator Control Registers.

Controls the corresponding single-shot comparator resource.

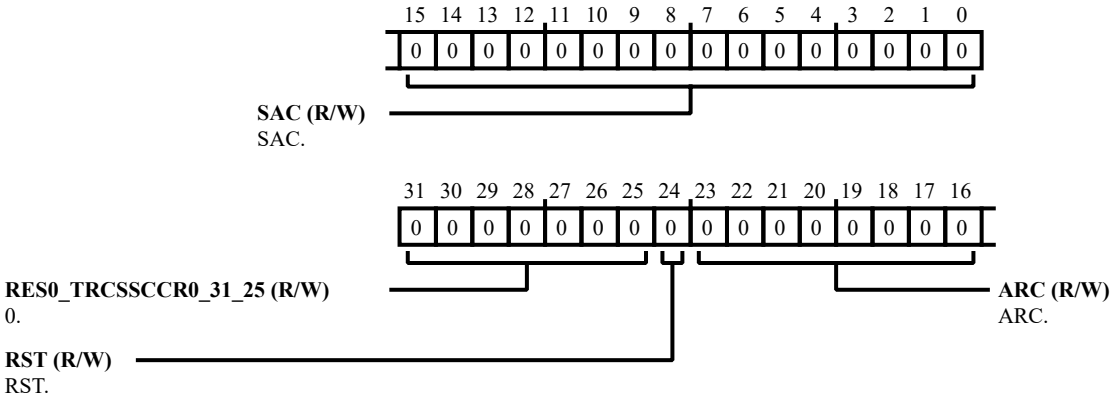

Figure 48-927: A55_C2_TRCSSCCR0 Register Diagram

Table 48-935: A55_C2_TRCSSCCR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:25 (R/W)	RES0_TRCSSCCR0_31_25	0.. Reserved, RES0.	
24 (R/W)	RST	RST.. Controls whether the single-shot comparator resource is reset when it fires. 0 When the single-shot comparator resource fires, it is not reset. 1 When the single-shot comparator resource fires, it is reset. This enables the single-shot comparator resource to fire multiple times.	
		0	When the single-shot comparator resource fires, it is not reset.
		1	When the single-shot comparator resource fires, it is reset. This enables the single-shot comparator resource to fire multiple times.

Table 48-935: A55_C2_TRCSSCCR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23:16 (R/W)	ARC	ARC.. Selects one or more address range comparators for single-shot control.Each bit represents an address range comparator pair, so bit[n-16] controls the selection of address range comparator pair n-16. If bit[n-16] is: 0 The address range comparator pair n-16 is not selected for single-shot control. 1 The address range comparator pair n-16 is selected for single-shot control. The width of this field is IMPLEMENTATION DEFINED. The field contains a number of implemented bits equal to TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The address range comparator pair n-16 is not selected for single-shot control.
		1	The address range comparator pair n-16 is selected for single-shot control.
15:0 (R/W)	SAC	SAC.. Selects one or more single address comparators for single-shot control.Each bit represents a single address comparator, so bit[n] controls the selection of single address comparator n. If bit[n] is: 0 The single address comparator n, is not selected for single-shot control. 1 The single address comparator n, is selected for single-shot control. The width of this field is IMPLEMENTATION DEFINED. The field contains a number of implemented bits equal to 2 x TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The single address comparator n, is not selected for single-shot control.
		1	The single address comparator n, is selected for single-shot control.

Trace Single-Shot Comparator Status Registers.

Returns the status of the corresponding single-shot comparator.

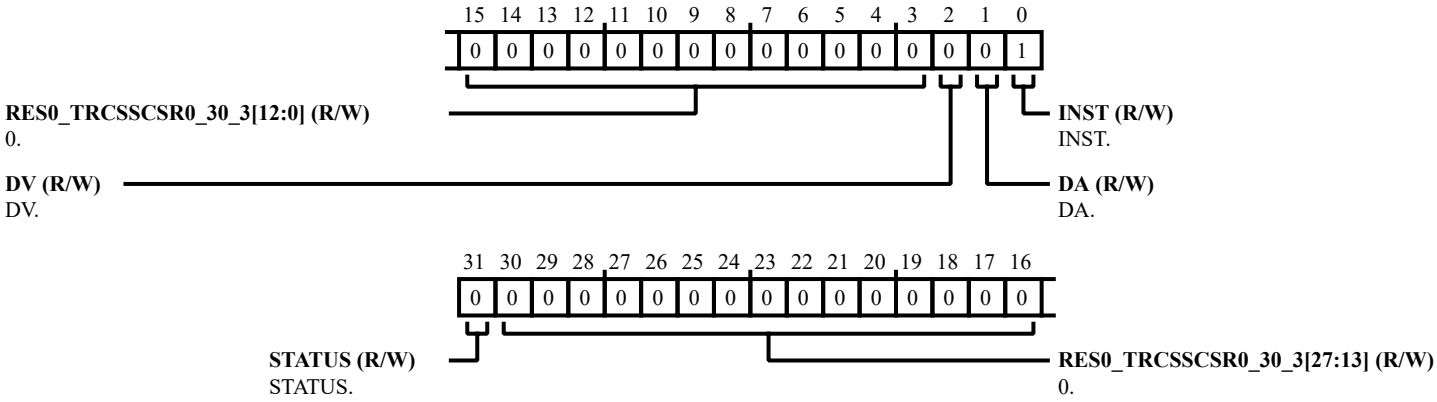

Figure 48-928: A55_C2_TRCSSCSR0 Register Diagram

Table 48-936: A55_C2_TRCSSCSR0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	STATUS	STATUS.. Single-shot status bit. Indicates if any of the comparators that TRCSSCCRn.SAC or TRCSSCCRn.ARC selects have matched: 0 No match has occurred. 1 One or more matches has occurred. If TRCSSCCRn.RST==0 then there is only one match and no more matches are possible, and software must reset this bit to 0 to re-enable the single-shot control. STATUS must be written to set an initial state when configuring the trace unit, if the single-shot comparator is to be used.	
		0	No match has occurred.
		1	One or more matches has occurred. If TRCSSCCRn.RST==0 then there is only one match and no more matches are possible, and software must reset this bit to 0 to re-enable the single-shot control.
30:3 (R/W)	RES0_TRCSSCSR0_30_3	0.. Reserved, RES0.	

Table 48-936: A55_C2_TRCSSCSR0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	DV	DV.. Data value comparator support bit. Indicates if the trace unit supports data address with data value comparisons: 0 Single-shot data address with data value comparisons are not supported. 1 Single-shot data address with data value comparisons are supported.	
		0	Single-shot data address with data value comparisons are not supported.
		1	Single-shot data address with data value comparisons are supported.
1 (R/W)	DA	DA.. Data address comparator support bit. Indicates if the trace unit supports data address comparisons: 0 Single-shot data address comparisons are not supported. 1 Single-shot data address comparisons are supported.	
		0	Single-shot data address comparisons are not supported.
		1	Single-shot data address comparisons are supported.
0 (R/W)	INST	INST.. Instruction address comparator support bit. Indicates if the trace unit supports instruction address comparisons: 0 Single-shot instruction address comparisons are not supported. 1 Single-shot instruction address comparisons are supported.	
		0	Single-shot instruction address comparisons are not supported.
		1	Single-shot instruction address comparisons are supported.

Trace Stall Control Register.

Trace Stall Control Register.

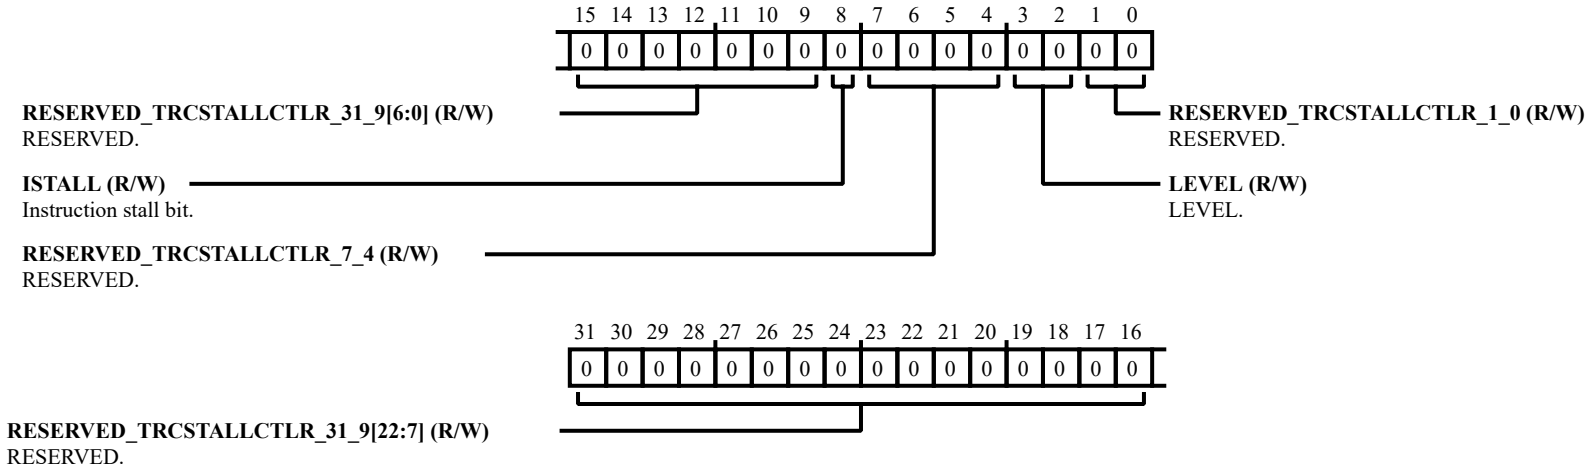

Figure 48-929: A55_C2_TRCSTALLCTLR Register Diagram

Table 48-937: A55_C2_TRCSTALLCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:9 (R/W)	RESERVED_TRCSTALLCTLR_31_9	RESERVED.. Reserved RES0.	
		0	Reserved.
8 (R/W)	ISTALL	Instruction stall bit.. Controls if the trace unit can stall the processor when the instruction trace buffer space is less than LEVEL.	
		0	The trace unit does not stall the processor.
		1	The trace unit can stall the processor.
7:4 (R/W)	RESERVED_TRCSTALLCTLR_7_4	RESERVED.. Reserved RES0.	
		0	Reserved.
3:2 (R/W)	LEVEL	LEVEL.. The field can support 4 monotonic levels from 0b00 to 0b11.	
		0	Minimum invasion. This setting has a greater risk of an ETM trace unit FIFO overflow.
		3	Maximum invasion occurs but there is less risk of a FIFO overflow.

Table 48-937: A55_C2_TRCSTALLCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
1:0 (R/W)	RESERVED_TRCSTALLCTLR_1_0	RESERVED.. Reserved RES0.	
		0	Reserved.

Trace Status Register.

Returns the trace unit status.

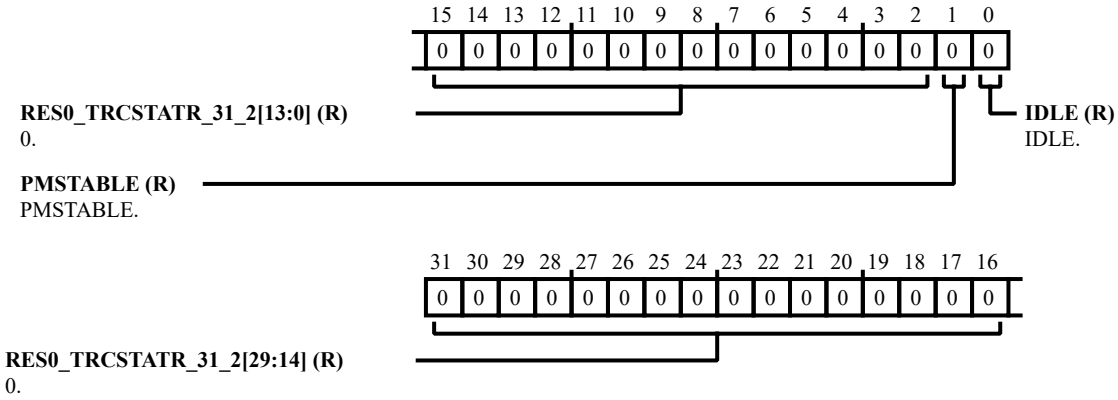

Figure 48-930: A55_C2_TRCSTATR Register Diagram

Table 48-938: A55_C2_TRCSTATR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:2 (R/NW)	RES0_TRCSTATR_31_2	0.. Reserved, RES0.	
1 (R/NW)	PMSTABLE	PMSTABLE.. Programmer's model stable bit: 0 The programmer's model is not stable. 1 The programmer's model is stable. When polled, the trace unit trace registers return stable data. The programmer's model is stable when all of the following are true:TRCPRGCTLR.EN==0 or the OS Lock is locked.Reads from trace unit registers return stable data.	
		0	The programmer's model is not stable.
		1	The programmer's model is stable. When polled, the trace unit trace registers return stable data.
0 (R/NW)	IDLE	IDLE.. Idle status bit: 0 The trace unit is not idle. 1 The trace unit is idle. The trace unit is idle when all of the following are true:TRCPRGCTLR.EN==0 or the OS Lock is locked.The trace unit is drained of any trace.With the exception of the programming interfaces, all external interfaces on the trace unit are quiescent.	
		0	The trace unit is not idle.
		1	The trace unit is idle.

Trace Synchronization Period Register.

Controls how often periodic trace synchronization requests occur.

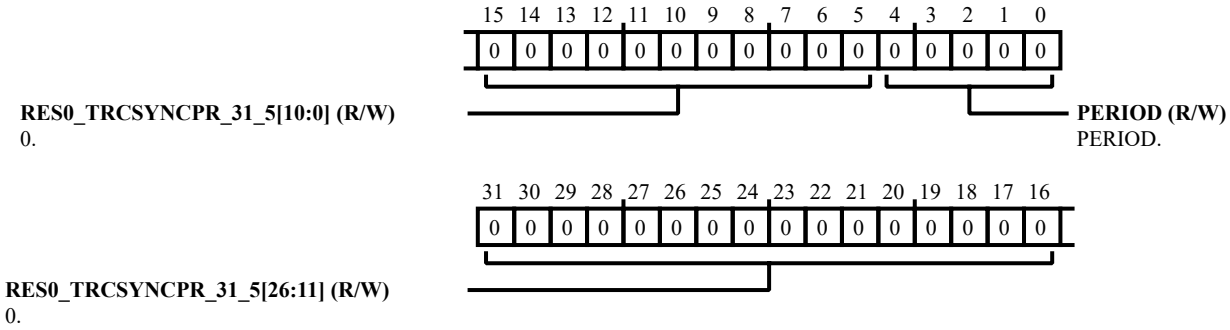

Figure 48-931: A55_C2_TRCSYNCPR Register Diagram

Table 48-939: A55_C2_TRCSYNCPR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:5 (R/W)	RES0_TRCSYNCPR_31_5	0.. Reserved, RES0.	
4:0 (R/W)	PERIOD	PERIOD.. Controls how many bytes of trace, the sum of instruction and data, that a trace unit can generate before a periodic trace synchronization request occurs. The number of bytes is always a power of two and the permitted values are: 00000 Periodic trace synchronization requests are disabled. This setting does not disable other types of trace synchronization request. 01000 Periodic trace synchronization request occurs after 2^8, or 256, bytes of trace. 01001 Periodic trace synchronization request occurs after 2^9, or 512, bytes of trace. 01010 Periodic trace synchronization request occurs after 2^10, or 1024, bytes of trace. and so on up to 0b10100, for which the request occurs after 2^20, or 1048576, bytes of trace.Values between 0b00001 and 0b001111 are reserved, as are values from 0b10101 onwards.	
		0	Periodic trace synchronization requests are disabled. This setting does not disable other types of trace synchronization request.
		8	Periodic trace synchronization request occurs after 2^8, or 256, bytes of trace.
		9	Periodic trace synchronization request occurs after 2^9, or 512, bytes of trace.
		10	Periodic trace synchronization request occurs after 2^10, or 1024, bytes of trace.

Trace Trace ID Register.

Sets the trace ID for instruction trace. If data trace is enabled then it also sets the trace ID for data trace, to (trace ID for instruction trace) + 1.

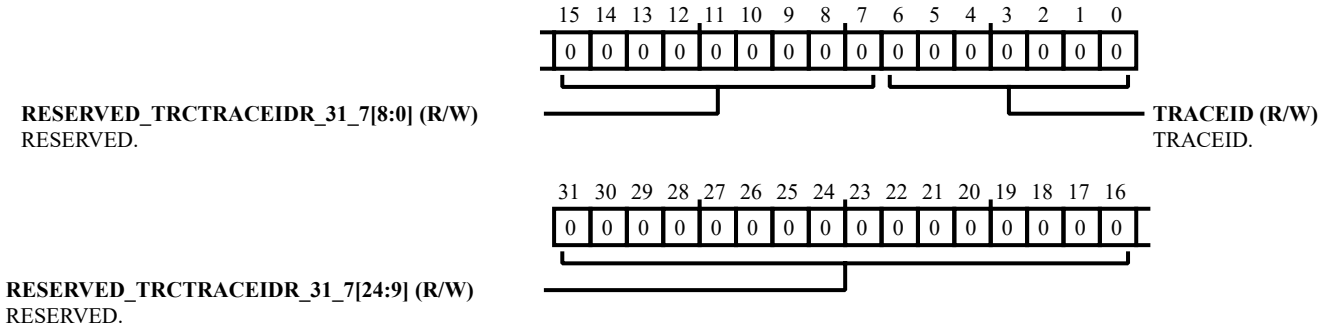

Figure 48-932: A55_C2_TRCTRACEIDR Register Diagram

Table 48-940: A55_C2_TRCTRACEIDR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:7 (R/W)	RESERVED_TRCTRA-CEIDR_31_7	RESERVED.. Reserved RES0.	
		0	Reserved.
6:0 (R/W)	TRACEID	TRACEID.. Trace ID value. When only instruction tracing is enabled this provides the trace ID.	

Trace Global Timestamp Control Register.

Controls the insertion of global timestamps in the trace streams.

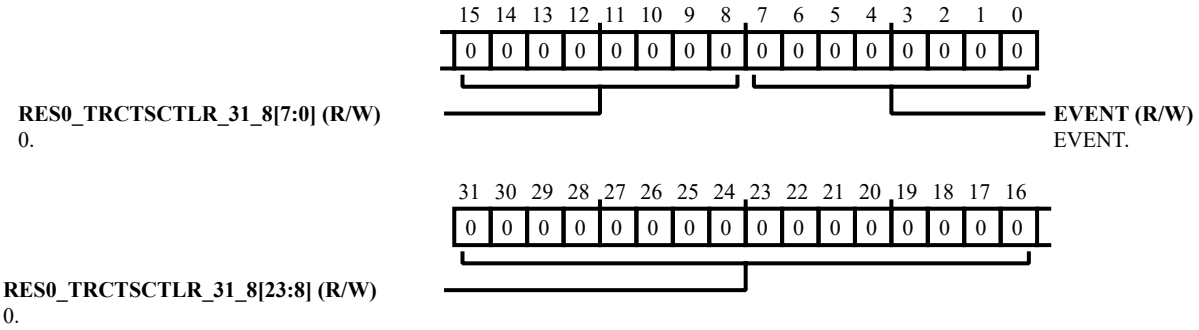

Figure 48-933: A55_C2_TRCTSCTLR Register Diagram

Table 48-941: A55_C2_TRCTSCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:8 (R/W)	RES0_TRCTSCTLR_31_8	0.. Reserved, RES0.
7:0 (R/W)	EVENT	EVENT.. An event selector. When the selected event is triggered, the trace unit inserts a global timestamp into the trace streams.

Trace ViewInst Main Control Register.

Controls instruction trace filtering.

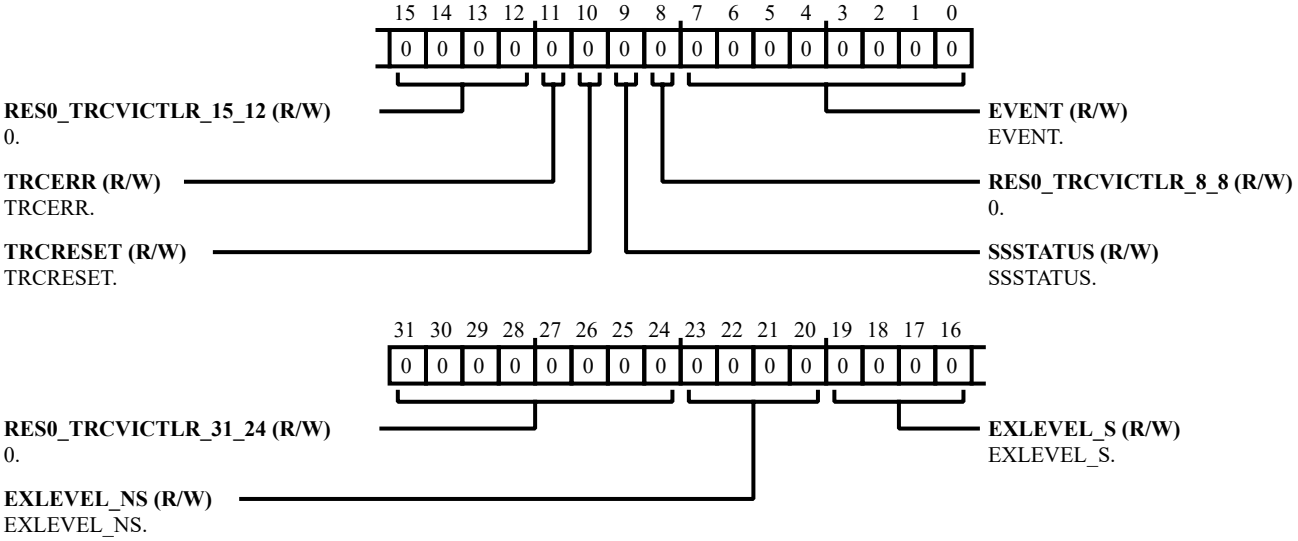

Figure 48-934: A55_C2_TRCVICTLR Register Diagram

Table 48-942: A55_C2_TRCVICTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/W)	RES0_TRCVICTLR_31_24	0.. Reserved, RES0.	
23:20 (R/W)	EXLEVEL_NS	EXLEVEL_NS.. In Non-secure state, each bit controls whether instruction tracing is enabled for the corresponding exception level: 0 The trace unit generates instruction trace, in Non-secure state, for exception level n. 1 The trace unit does not generate instruction trace, in Non-secure state, for exception level n. The exception levels are:Bit[20]Exception level 0.Bit[21]Exception level 1.Bit[22]Exception level 2.Bit[23]RAZ/WI. EXLEVEL_NS[3] is never implemented.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_NS. If instruction tracing is not implemented for a given exception level, the corresponding bit in this field is not implemented. Unimplemented bits are RAZ/WI.	
		0	The trace unit generates instruction trace, in Non-secure state, for exception level n.
		1	The trace unit does not generate instruction trace, in Non-secure state, for exception level n.

Table 48-942: A55_C2_TRCVICTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19:16 (R/W)	EXLEVEL_S	EXLEVEL_S.. In Secure state, each bit controls whether instruction tracing is enabled for the corresponding exception level: 0 The trace unit generates instruction trace, in Secure state, for exception level n. 1 The trace unit does not generate instruction trace, in Secure state, for exception level n. The exception levels are:Bit[16]Exception level 0.Bit[17]Exception level 1.Bit[18]RAZ/WI. EXLEVEL_S[2] is never implemented.Bit[19]Exception level 3.The content of the field is IMPLEMENTATION DEFINED and is set by the value of TRCIDR3.EXLEVEL_S. If instruction tracing is not implemented for a given exception level, the corresponding bit in this field is not implemented. Unimplemented bits are RAZ/WI.	
		0	The trace unit generates instruction trace, in Secure state, for exception level n.
		1	The trace unit does not generate instruction trace, in Secure state, for exception level n.
15:12 (R/W)	RES0_TRCVICTLR_15_12	0.. Reserved, RES0.	
11 (R/W)	TRCERR	TRCERR.. If TRCIDR3.TRCERR==1, this bit controls whether a trace unit must trace a system error exception: 0 The trace unit does not trace a system error exception unless it traces the exception or instruction immediately prior to the system error exception. 1 The trace unit always traces a system error exception. If TRCIDR3.TRCERR==0, this bit is RES0.	
		0	The trace unit does not trace a system error exception unless it traces the exception or instruction immediately prior to the system error exception.
		1	The trace unit always traces a system error exception.
10 (R/W)	TRCRESET	TRCRESET.. Controls whether a trace unit must trace a Reset exception: 0 The trace unit does not trace a Reset exception unless it traces the exception or instruction immediately prior to the Reset exception. 1 The trace unit always traces a Reset exception.	
		0	The trace unit does not trace a Reset exception unless it traces the exception or instruction immediately prior to the Reset exception.
		1	The trace unit always traces a Reset exception.

Table 48-942: A55_C2_TRCVICTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
9 (R/W)	SSSTATUS	SSSTATUS.. IF TRCIDR4.NUMACPAIRS>0 or TRCIDR.NUMPC>0, this bit returns the status of the start-stop logic: 0 The start-stop logic is in the stopped state. 1 The start-stop logic is in the started state. The bit only returns stable data when TRCSTATR.PMSTABLE==1.Before software enables the trace unit, TRCPRGCTLR.EN==1, it must write to this bit to set the initial state of the start-stop logic. If the start-stop logic is not used then set this bit to 1. ARM recommends that the value of this bit is set before each trace run begins.If TRCIDR4.NUMACPAIRS==0 and TRCIDR4.NUMPC==0, this bit is RES0, indicating that the start-stop logic is not implemented.	
		0	The start-stop logic is in the stopped state.
		1	The start-stop logic is in the started state.
8 (R/W)	RES0_TRCVICTLR_8_8	0.. Reserved, RES0.	
7:0 (R/W)	EVENT	EVENT.. An event selector. [TODO: Add the bit assignments for EVENT fields into the descriptions directly?].	

Trace ViewInst Include/Exclude Control Register.

Use this to set or read the address range comparators for the ViewInst include and exclude controls.

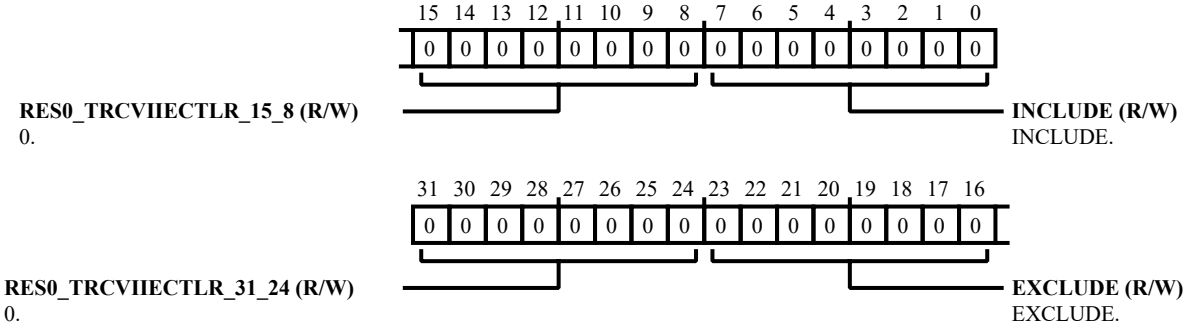

Figure 48-935: A55_C2_TRCVIIECTLR Register Diagram

Table 48-943: A55_C2_TRCVIIECTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:24 (R/W)	RES0_TRCVIIECTLR_31_24	0.. Reserved, RES0.	
23:16 (R/W)	EXCLUDE	EXCLUDE.. 0 1 The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	
		1	
15:8 (R/W)	RES0_TRCVIIECTLR_15_8	0.. Reserved, RES0.	

Table 48-943: A55_C2_TRCVIIECTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
7:0 (R/W)	INCLUDE	INCLUDE.. Include range field. Selects which address range comparator pairs are in use with ViewInst include control. Each bit represents an address range comparator pair, so bit[m] controls the selection of address range comparator pair m. If bit[m] is: 0 The address range that address range comparator pair m defines is not selected for ViewInst include control. 1 The address range that address range comparator pair m defines is selected for ViewInst include control. The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.Selecting no include comparators indicates that all instructions are included by default. The exclude control then indicates which ranges are excluded.	
		0	The address range that address range comparator pair m defines is not selected for ViewInst include control.
		1	The address range that address range comparator pair m defines is selected for ViewInst include control.

Trace ViewInst Start/Stop Control Register.

Use this to set, or read, the single address comparators that control the ViewInst start-stop logic. The start-stop logic is active for an instruction which causes a start and remains active up to and including an instruction which causes a stop, and then the start-stop logic becomes inactive.

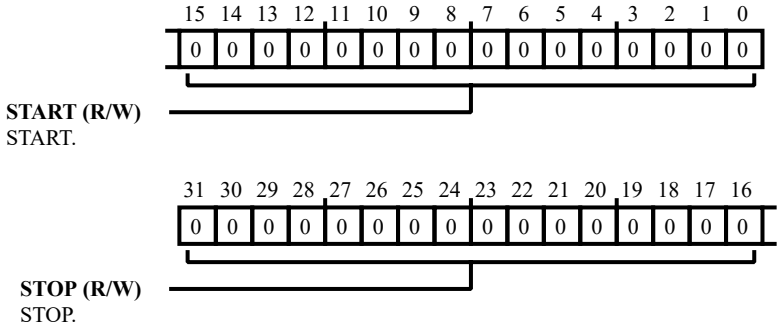

Figure 48-936: A55_C2_TRCVISSCTLR Register Diagram

Table 48-944: A55_C2_TRCVISSCTLR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:16 (R/W)	STOP	STOP.. Selects which single address comparators are in use with ViewInst start-stop control, for the purpose of stopping trace. Each bit represents a single address comparator, so bit[m] controls the selection of single address comparator m-16. If bit[m] is: 0 The single address comparator m-16 is not selected as a stop resource. 1 The single address comparator m-16 is selected as a stop resource. The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of 2 x TRCIDR4.NUMACPAIRS. Unimplemented bits are RAZ/WI.	
		0	The single address comparator m-16 is not selected as a stop resource.
		1	The single address comparator m-16 is selected as a stop resource.

Table 48-944: A55_C2_TRCVISSCTLR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15:0 (R/W)	START	START.. Selects which single address comparators are in use with ViewInst start-stop control, for the purpose of starting trace. Each bit represents a single address comparator, so bit[n] controls the selection of single address comparator n. If bit[n] is: 0 The single address comparator n is not selected as a start resource. 1 The single address comparator n is selected as a start resource. The implemented width of the field, n, is IMPLEMENTATION DEFINED and is set by the value of 2 x TRCIDR4.NUMAC-PAIRS. Unimplemented bits are RAZ/WI.	
		0	The single address comparator n is not selected as a start resource.
		1	The single address comparator n is selected as a start resource.

Trace VMID Comparator Value Registers.

Contains a VMID value.

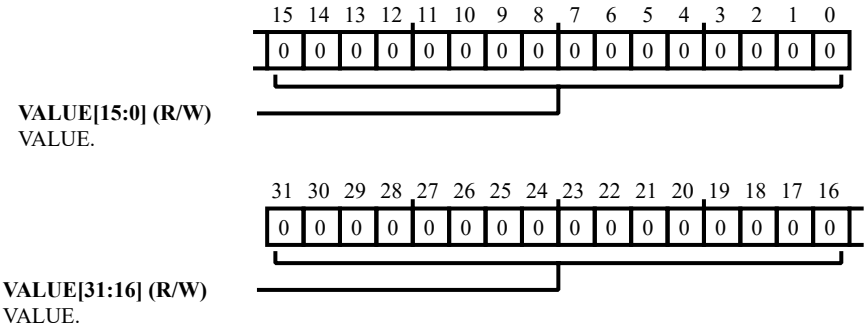

Figure 48-937: A55_C2_TRCVMIDCVR0_31_0 Register Diagram

Table 48-945: A55_C2_TRCVMIDCVR0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. VMID value. The implemented width of this field is IMPLEMENTATION DEFINED, and is set by TRCIDR2.VMIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the VMID is zero until the processor updates the VMID.

Trace VMID Comparator Value Registers.

Contains a VMID value.

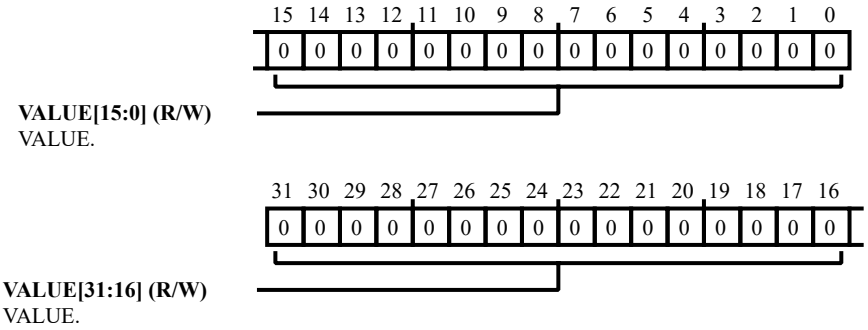

Figure 48-938: A55_C2_TRCVMIDCVR0_63_32 Register Diagram

Table 48-946: A55_C2_TRCVMIDCVR0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	VALUE	VALUE.. VMID value. The implemented width of this field is IMPLEMENTATION DEFINED, and is set by TRCIDR2.VMIDSIZE. Unimplemented bits are RAZ/WI.After a processor reset, the ETM architecture assumes that the VMID is zero until the processor updates the VMID.

Performance Monitors Cycle Counter Filter Register.

Determines the modes in which the Cycle Counter, PMCCNTR_EL0, increments.

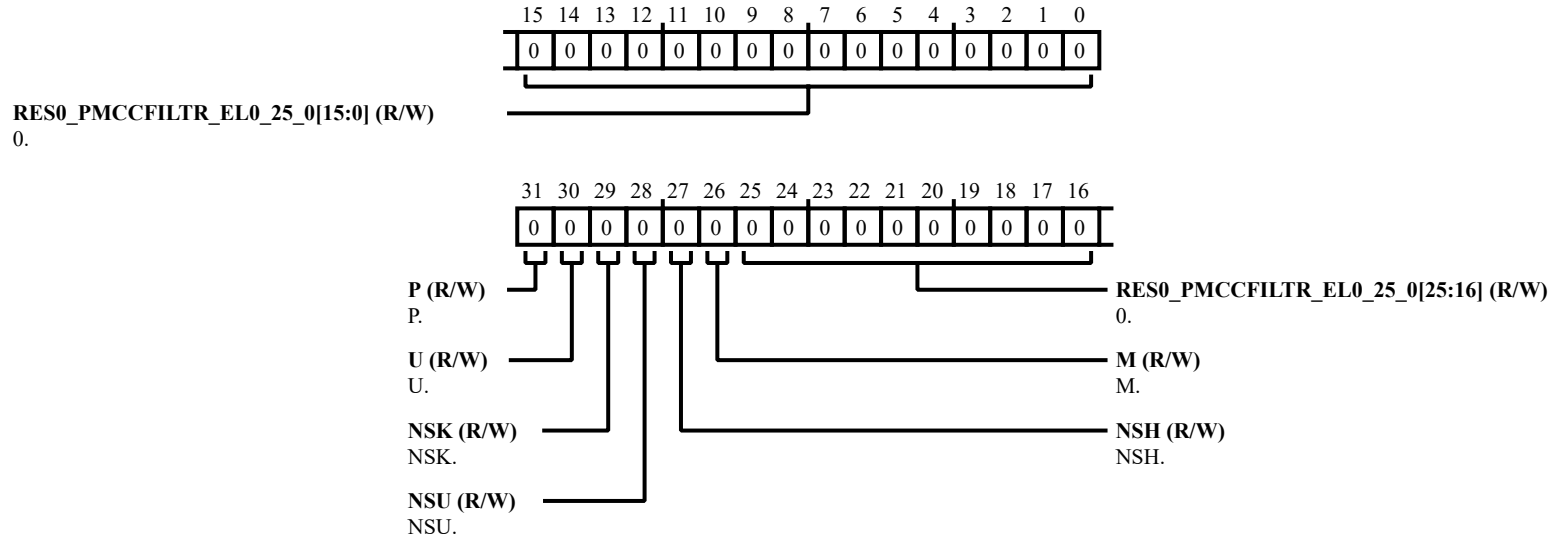

Figure 48-939: A55_C2_PMCCFILTR_EL0 Register Diagram

Table 48-947: A55_C2_PMCCFILTR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	P	P.. Privileged modes filtering bit. Controls counting in EL1. If EL3 is implemented, then counting in Non-secure EL1 is further controlled by the NSK bit. The possible values of this bit are: 0 Count cycles in EL1. 1 Do not count cycles in EL1.	
		0	Count cycles in EL1.
		1	Do not count cycles in EL1.
30 (R/W)	U	U.. User filtering bit. Controls counting in EL0. If EL3 is implemented, then counting in Non-secure EL0 is further controlled by the NSU bit. The possible values of this bit are: 0 Count cycles in EL0. 1 Do not count cycles in EL0.	
		0	Count cycles in EL0.
		1	Do not count cycles in EL0.
29 (R/W)	NSK	NSK.. Non-secure EL1 (kernel) modes filtering bit. Controls counting in Non-secure EL1. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Non-secure EL1 are counted. Otherwise, cycles in Non-secure EL1 are not counted.	

Table 48-947: A55_C2_PMCCFILTR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	NSU	NSU.. Non-secure EL0 (Unprivileged) filtering. Controls counting in Non-secure EL0. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of U, cycles in Non-secure EL0 are counted. Otherwise, cycles in Non-secure EL0 are not counted.	
27 (R/W)	NSH	NSH.. Non-secure EL2 (Hypervisor) filtering bit. Controls counting in Non-secure EL2. If EL2 is not implemented, this bit is RES0. 0 Do not count cycles in EL2. 1 Count cycles in EL2.	
		0	Do not count cycles in EL2.
		1	Count cycles in EL2.
26 (R/W)	M	M.. Secure EL3 filtering bit. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Otherwise, cycles in Secure EL3 are not counted. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Most applications can ignore this field and set its value to 0. This field is not visible in the AArch32 PMCCFILTR System register.	
25:0 (R/W)	RES0_PMCCFILTR_EL0_25_0	0.. Reserved, RES0.	

Performance Monitors Cycle Counter.

Holds the value of the processor Cycle Counter, CCNT, that counts processor clock cycles. See for more information.

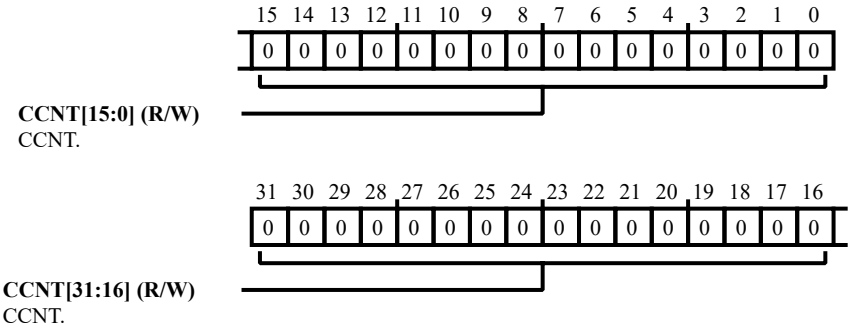

Figure 48-940: A55_C2_PMCCNTR_EL0_31_0 Register Diagram

Table 48-948: A55_C2_PMCCNTR_EL0_31_0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	CCNT	CCNT.. Cycle count. Depending on the values of PMCR_EL0.{LC,D}, the cycle count increments in one of the following ways: Every processor clock cycle. Every 64th processor clock cycle. Writing 1 to PMCR_EL0.C sets this field to 0.

Performance Monitors Cycle Counter.

Holds the value of the processor Cycle Counter, CCNT, that counts processor clock cycles. See for more information.

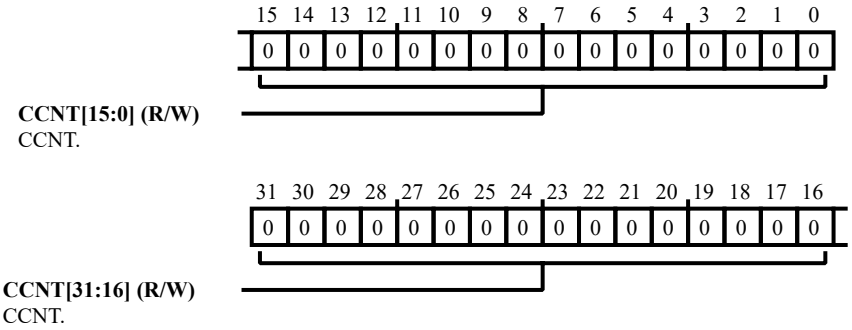

Figure 48-941: A55_C2_PMCCNTR_EL0_63_32 Register Diagram

Table 48-949: A55_C2_PMCCNTR_EL0_63_32 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	CCNT	CCNT.. Cycle count. Depending on the values of PMCR_EL0.{LC,D}, the cycle count increments in one of the following ways: Every processor clock cycle. Every 64th processor clock cycle. Writing 1 to PMCR_EL0.C sets this field to 0.

Performance Monitors Common Event Identification register 0.

Defines which common architectural and common microarchitectural feature events in the range 0x000 to 0x01F are implemented. If a particular bit is set to 1, then the event for that bit is implemented. This view of the register has previously been called PMCEID0_EL0.

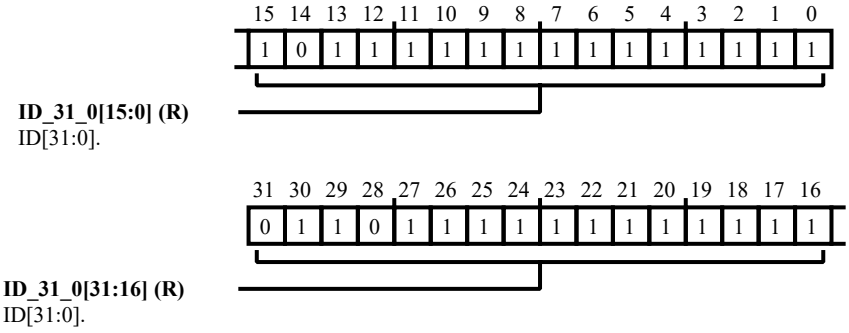

Figure 48-942: A55_C2_PMCEID0 Register Diagram

Table 48-950: A55_C2_PMCEID0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_31_0	ID[31:0].. PMCEID0[n] maps to event n. For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Common Event Identification register 1.

Defines which common architectural and common microarchitectural feature events in the range 0x020 to 0x03F are implemented. If a particular bit is set to 1, then the event for that bit is implemented. This view of the register has previously been called PMCEID1_EL0.

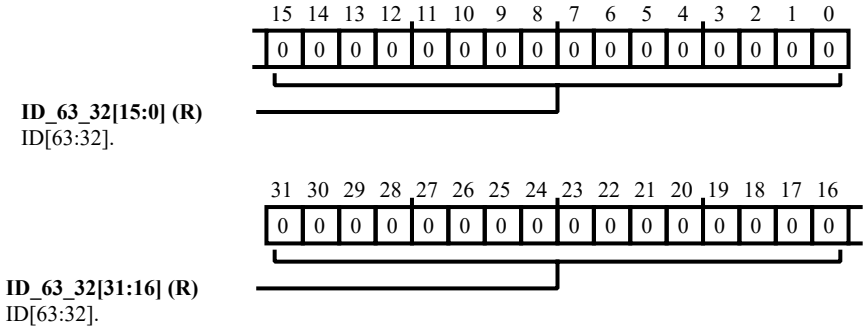

Figure 48-943: A55_C2_PMCEID1 Register Diagram

Table 48-951: A55_C2_PMCEID1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_63_32	ID[63:32].. PMCEID1[n] maps to event (n + 32). For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Common Event Identification register 2.

Defines which common architectural and common microarchitectural feature events in the range 0x4000 to 0x401F are implemented. If a particular bit is set to 1, then the event for that bit is implemented.

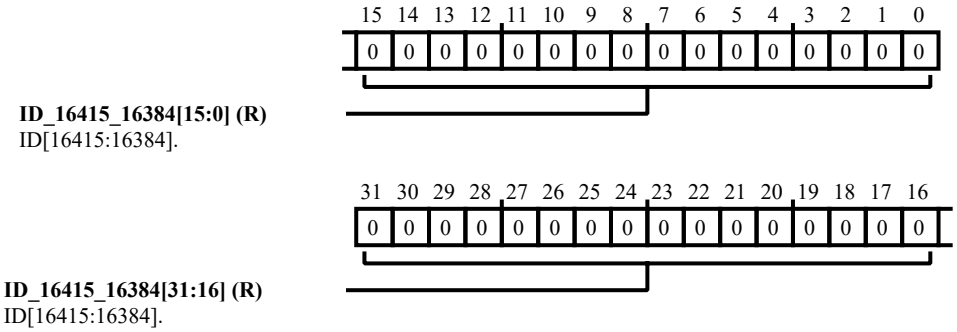

Figure 48-944: A55_C2_PMCEID2 Register Diagram

Table 48-952: A55_C2_PMCEID2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_16415_16384	ID[16415:16384].. PMCEID2[31:0] maps to common events 0x4000 to 0x401F. For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Common Event Identification register 3.

Defines which common architectural and common microarchitectural feature events in the range 0x4020 to 0x403F are implemented. If a particular bit is set to 1, then the event for that bit is implemented.

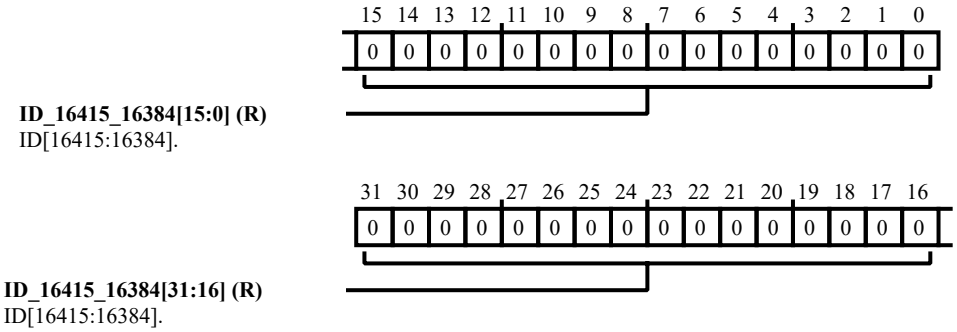

Figure 48-945: A55_C2_PMCEID3 Register Diagram

Table 48-953: A55_C2_PMCEID3 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:0 (R/NW)	ID_16415_16384	ID[16415:16384].. PMCEID2[31:0] maps to common events 0x4000 to 0x401F. For a list of event numbers and descriptions, see . For each bit: 0 The common event is not implemented. 1 The common event is implemented. Bits that map to reserved event numbers are reserved to identify events that might be defined in future revisions to the architecture. Events that do not require additional features in the PMU can be defined retrospectively, meaning that they can be implemented as part of a PMUv3 implementation.	
		0	The common event is not implemented.
		1	The common event is implemented.

Performance Monitors Configuration Register.

Contains PMU-specific configuration data.

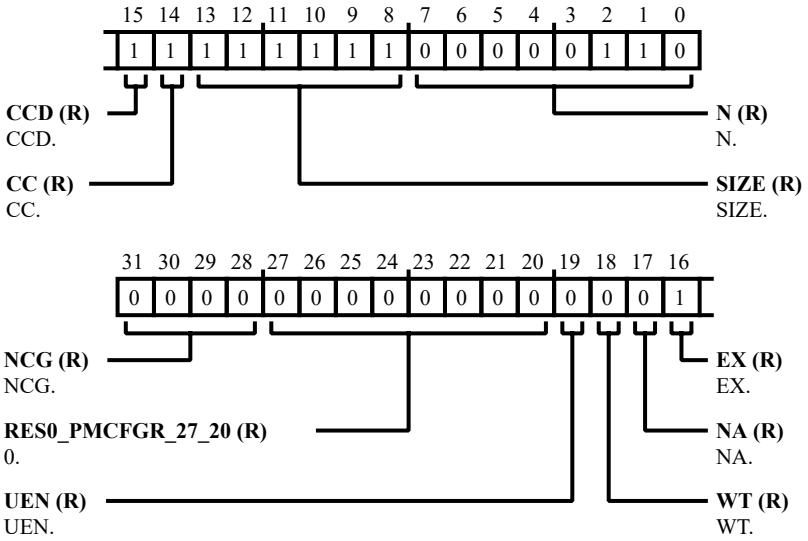

Figure 48-946: A55_C2_PMCFGR Register Diagram

Table 48-954: A55_C2_PMCFGR Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:28 (R/NW)	NCG	NCG.. This feature is not supported, so this field is RAZ.	
27:20 (R/NW)	RES0_PMCFGR_27_20	0.. Reserved, RES0.	
19 (R/NW)	UEN	UEN.. User-mode Enable Register supported. PMUSERENR_EL0 is not visible in the external debug interface, so this bit is RAZ.	
18 (R/NW)	WT	WT.. This feature is not supported, so this bit is RAZ.	
17 (R/NW)	NA	NA.. This feature is not supported, so this bit is RAZ.	
16 (R/NW)	EX	EX.. Export supported. Value is IMPLEMENTATION DEFINED. 0 PMCR_EL0.X is RES0. 1 PMCR_EL0.X is read/write.	
		0	PMCR_EL0.X is RES0.
		1	PMCR_EL0.X is read/write.

Table 48-954: A55_C2_PMCFGR Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
15 (R/NW)	CCD	CCD.. Cycle counter has prescale. This is RES1 if AArch32 is supported at any EL, and RAZ otherwise. 0 PMCR_EL0.D is RES0. 1 PMCR_EL0.D is read/write.	
		0	PMCR_EL0.D is RES0.
		1	PMCR_EL0.D is read/write.
14 (R/NW)	CC	CC.. Dedicated cycle counter (counter 31) supported. This bit is RAO.	
13:8 (R/NW)	SIZE	SIZE.. Size of counters. This field determines the spacing of counters in the memory-map. In ARMv8 the counters are at doubleword-aligned addresses, and the largest counter is 64-bits, so this field is 0b111111.	
7:0 (R/NW)	N	N.. Number of counters implemented in addition to the cycle counter, PMCCNTR_EL0. The maximum number of event counters is 31. 00000000 Only PMCCNTR_EL0 implemented. 00000001 PMCCNTR_EL0 plus one event counter implemented. and so on up to 0b00011111, which indicates PMCCNTR_EL0 and 31 event counters implemented.	
		0	Only PMCCNTR_EL0 implemented.
		1	PMCCNTR_EL0 plus one event counter implemented.

Performance Monitors Count Enable Clear register.

Disables the Cycle Count Register, PMCCNTR_EL0, and any implemented event counters PMEVCNTR0. Reading this register shows which counters are enabled.

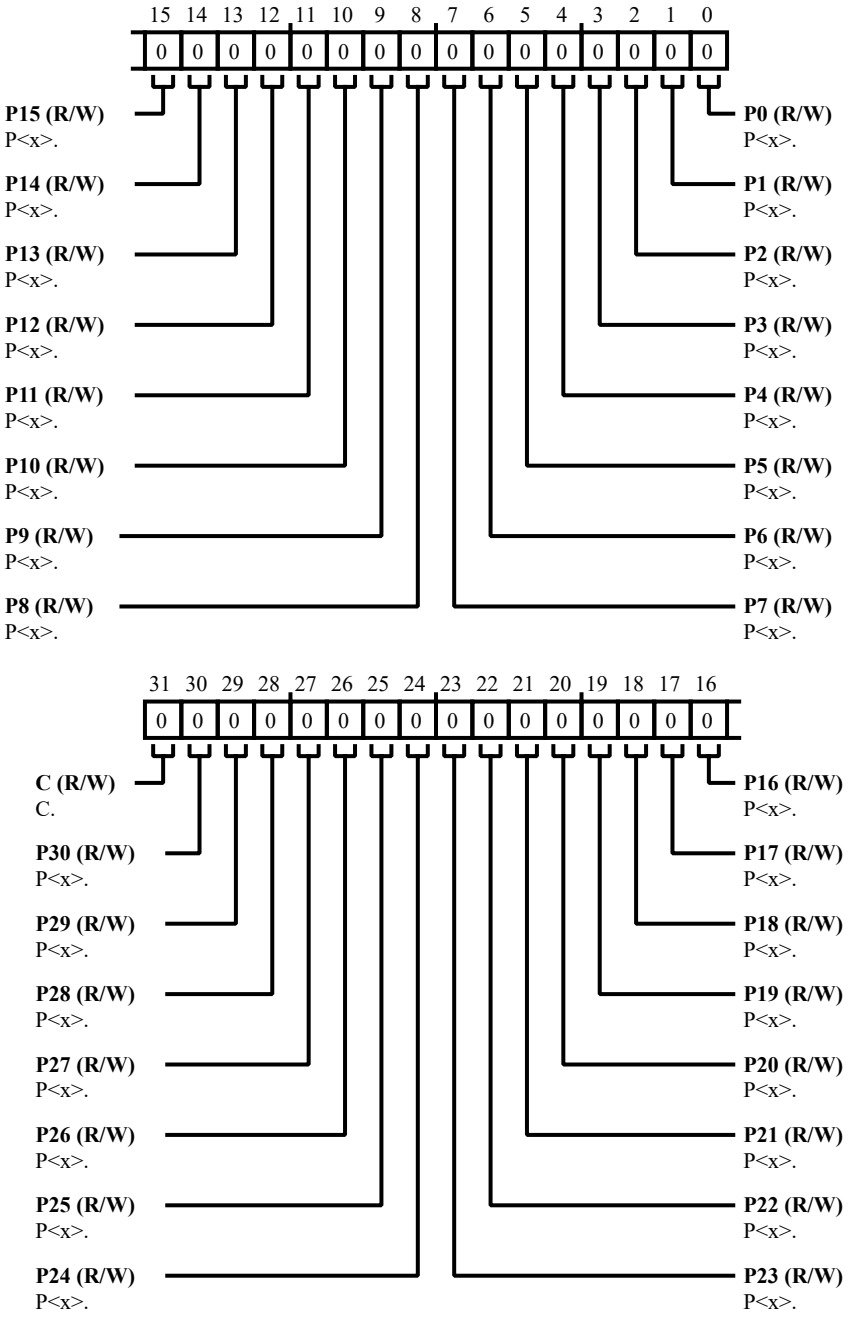

Figure 48-947: A55_C2_PMCNTENCLR_EL0 Register Diagram

Table 48-955: A55_C2_PMCNTENCLR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 disable bit. Disables the cycle counter register. Possible values are: 0 When read, means the cycle counter is disabled. When written, has no effect. 1 When read, means the cycle counter is enabled. When written, disables the cycle counter.	
		0	When read, means the cycle counter is disabled. When written, has no effect.
		1	When read, means the cycle counter is enabled. When written, disables the cycle counter.
30 (R/W)	P30	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
29 (R/W)	P29	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
28 (R/W)	P28	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-955: A55_C2_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
27 (R/W)	P27	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
26 (R/W)	P26	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
25 (R/W)	P25	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
24 (R/W)	P24	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-955: A55_C2_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
23 (R/W)	P23	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
22 (R/W)	P22	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
21 (R/W)	P21	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
20 (R/W)	P20	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Table 48-955: A55_C2_PMCNTENCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19 (R/W)	P19	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
18 (R/W)	P18	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
17 (R/W)	P17	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
16 (R/W)	P16	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
2 (R/W)	P2	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
1 (R/W)	P1	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.
0 (R/W)	P0	P<x>.. Event counter disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> is enabled. When written, disables PMEVCNTR<x>.

Performance Monitors Count Enable Set register.

Enables the Cycle Count Register, PMCCNTR_EL0, and any implemented event counters PMEVCNTR0. Reading this register shows which counters are enabled.

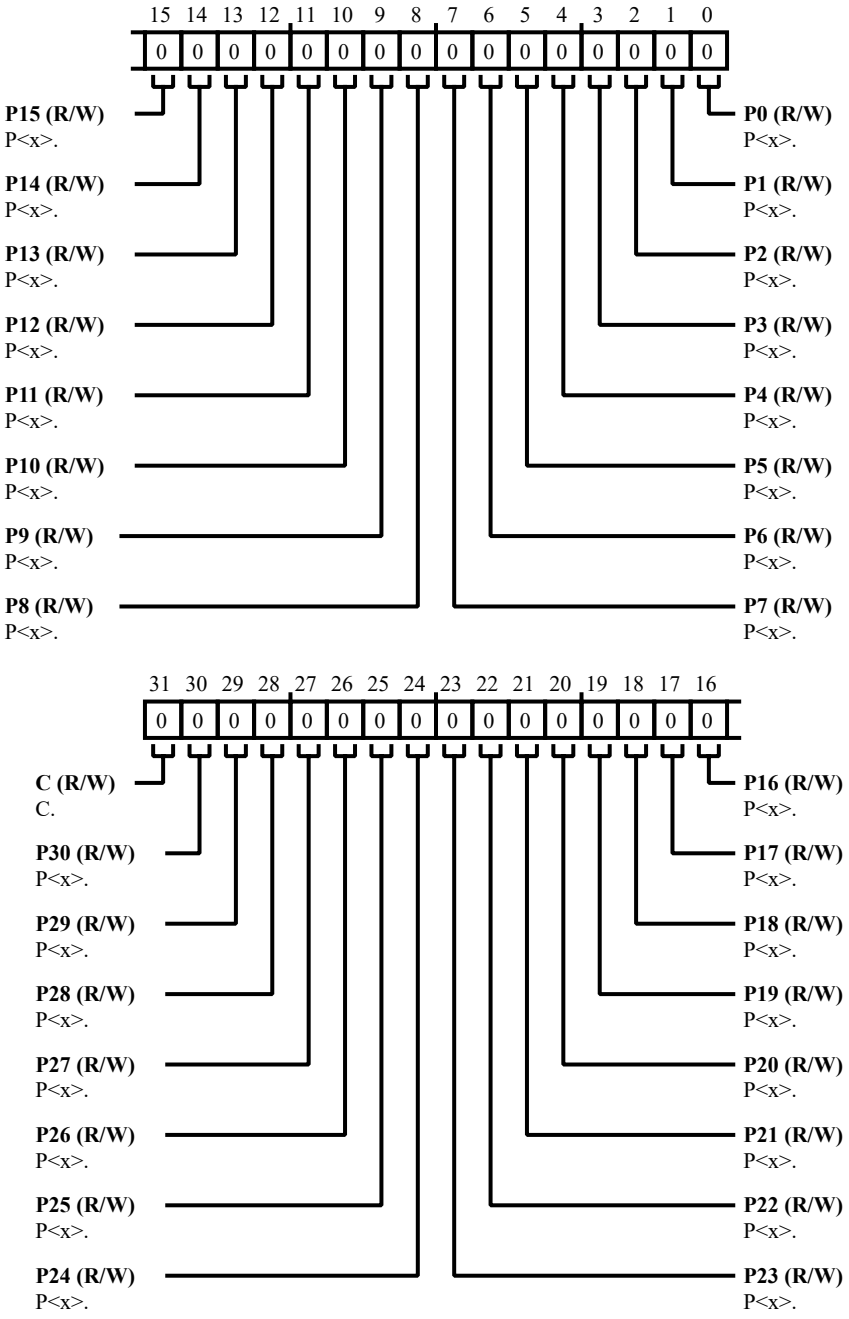

Figure 48-948: A55_C2_PMCNTENSET_EL0 Register Diagram

Table 48-956: A55_C2_PMCNTENSET_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 enable bit. Enables the cycle counter register. Possible values are: 0 When read, means the cycle counter is disabled. When written, has no effect. 1 When read, means the cycle counter is enabled. When written, enables the cycle counter.	
		0	When read, means the cycle counter is disabled. When written, has no effect.
		1	When read, means the cycle counter is enabled. When written, enables the cycle counter.
30 (R/W)	P30	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
29 (R/W)	P29	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
28 (R/W)	P28	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.

Table 48-956: A55_C2_PMCNTENSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
27 (R/W)	P27	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
26 (R/W)	P26	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
25 (R/W)	P25	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
24 (R/W)	P24	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.

1 (R/W)	P1	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.
0 (R/W)	P0	P<x>.. Event counter enable bit for PMEVCNTR<x>. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<x> is disabled. When written, has no effect. 1 When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.	
		0	When read, means that PMEVCNTR<x> is disabled. When written, has no effect.
		1	When read, means that PMEVCNTR<x> event counter is enabled. When written, enables PMEVCNTR<x>.

Performance Monitors Control Register.

Provides details of the Performance Monitors implementation, including the number of counters implemented, and configures and controls the counters.

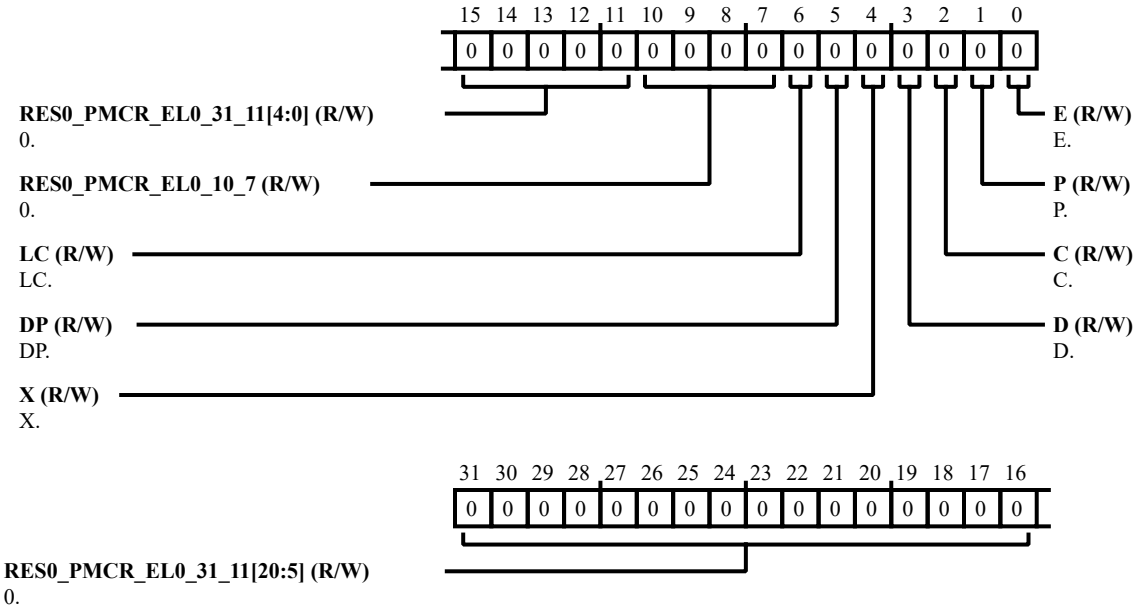

Figure 48-949: A55_C2_PMCR_EL0 Register Diagram

Table 48-957: A55_C2_PMCR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:11 (R/W)	RES0_PMCR_EL0_31_11	0.. Reserved, RAZ/WI.	
10:7 (R/W)	RES0_PMCR_EL0_10_7	0.. Reserved, RES0.	
6 (R/W)	LC	LC.. Long cycle counter enable. Determines which PMCCNTR_EL0 bit generates an overflow recorded by PMOVSR[31]. 0 Cycle counter overflow on increment that changes PMCCNTR_EL0[31] from 1 to 0. 1 Cycle counter overflow on increment that changes PMCCNTR_EL0[63] from 1 to 0. ARM deprecates use of PMCR_EL0.LC = 0. In an AArch64-only implementation, this field is RES1.	
		0	Cycle counter overflow on increment that changes PMCCNTR_EL0[31] from 1 to 0.
		1	Cycle counter overflow on increment that changes PMCCNTR_EL0[63] from 1 to 0.

Table 48-957: A55_C2_PMCR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
5 (R/W)	DP	DP.. Disable cycle counter when event counting is prohibited. The possible values of this bit are: 0 PMCCNTR_EL0, if enabled, counts when event counting is prohibited. 1 PMCCNTR_EL0 does not count when event counting is prohibited. Event counting is prohibited when ProfilingProhibited(IsSecure(),PSTATE.EL) == TRUE. When EL3 is not implemented, this field is RES0: In ARMv8.0. In ARMv8.1, only if EL2 is not implemented. Otherwise this field is RW.	
		0	PMCCNTR_EL0, if enabled, counts when event counting is prohibited.
		1	PMCCNTR_EL0 does not count when event counting is prohibited.
4 (R/W)	X	X.. Enable export of events in an IMPLEMENTATION DEFINED event stream. The possible values of this bit are: 0 Do not export events. 1 Export events where not prohibited. This field enables the exporting of events over an event bus to another device, for example to an OPTIONAL trace macrocell. If the implementation does not include such an event bus then this field is RAZ/WI, otherwise it is an RW field. In an implementation that includes an event bus, no events are exported when counting is prohibited. This field does not affect the generation of Performance Monitors overflow interrupt requests or signaling to a cross-trigger interface (CTI) that can be implemented as signals exported from the PE.	
		0	Do not export events.
		1	Export events where not prohibited.
3 (R/W)	D	D.. Clock divider. The possible values of this bit are: 0 When enabled, PMCCNTR_EL0 counts every clock cycle. 1 When enabled, PMCCNTR_EL0 counts once every 64 clock cycles. In an AArch64-only implementation this field is RES0, otherwise it is an RW field.If PMCR_EL0.LC == 1, this bit is ignored and the cycle counter counts every clock cycle.	
		0	When enabled, PMCCNTR_EL0 counts every clock cycle.
		1	When enabled, PMCCNTR_EL0 counts once every 64 clock cycles.

Table 48-957: A55_C2_PMCR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	C	C.. Cycle counter reset. This bit is WO. The effects of writing to this bit are: 0 No action. 1 Reset PMCCNTR_EL0 to zero. This bit is always RAZ. Resetting PMCCNTR_EL0 does not clear the PMCCNTR_EL0 overflow bit to 0.	
		0	No action.
		1	Reset PMCCNTR_EL0 to zero.
1 (R/W)	P	P.. Event counter reset. This bit is WO. The effects of writing to this bit are: 0 No action. 1 Reset all event counters, not including PMCCNTR_EL0, to zero. This bit is always RAZ. Resetting the event counters does not clear any overflow bits to 0.	
		0	No action.
		1	Reset all event counters, not including PMCCNTR_EL0, to zero.
0 (R/W)	E	E.. Enable. The possible values of this bit are: 0 All counters, including PMCCNTR_EL0, are disabled. 1 All counters are enabled by PMCNTENSET_EL0. This bit is RW.	
		0	All counters, including PMCCNTR_EL0, are disabled.
		1	All counters are enabled by PMCNTENSET_EL0.

Performance Monitors Event Count Registers.

Holds event counter n, which counts events, where n is 0 to 30.

31:0 (R/W)	EVENT_COUNTER_N	Event counter n.. Event counter n. Value of event counter n, where n is the number of this register and is a number from 0 to 30.

Performance Monitors Event Type Registers.

Configures event counter n, where n is 0 to 30.

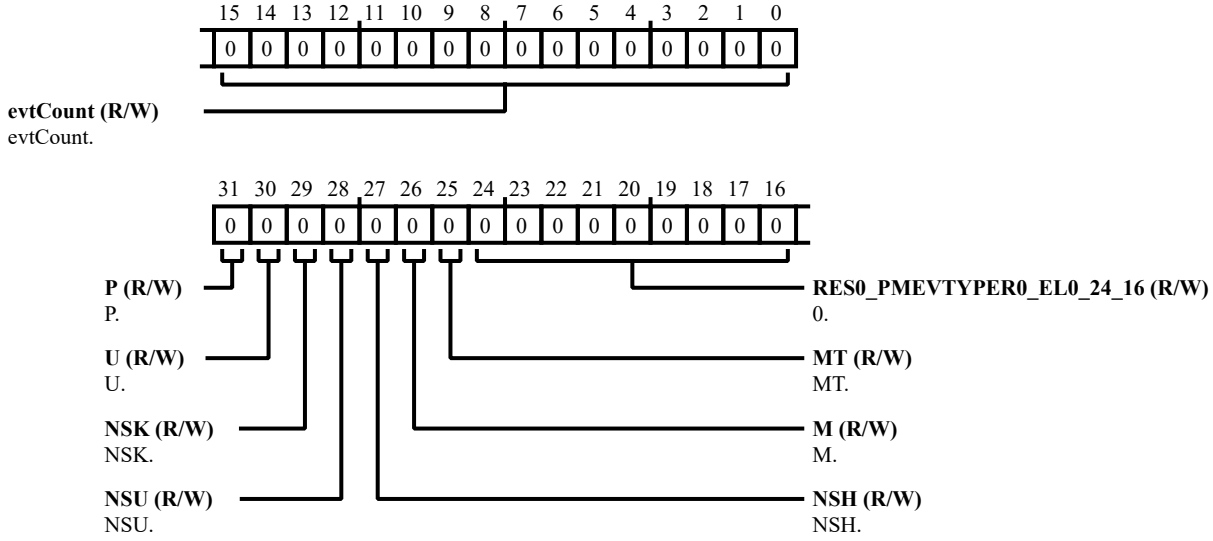

Figure 48-956: A55_C2_PMEVTYPER0_EL0 Register Diagram

Table 48-964: A55_C2_PMEVTYPER0_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	P	P.. Privileged filtering bit. Controls counting in EL1. If EL3 is implemented, then counting in Non-secure EL1 is further controlled by the NSK bit. The possible values of this bit are: 0 Count events in EL1. 1 Do not count events in EL1.	
		0	Count events in EL1.
		1	Do not count events in EL1.
30 (R/W)	U	U.. User filtering bit. Controls counting in EL0. If EL3 is implemented, then counting in Non-secure EL0 is further controlled by the NSU bit. The possible values of this bit are: 0 Count events in EL0. 1 Do not count events in EL0.	
		0	Count events in EL0.
		1	Do not count events in EL0.
29 (R/W)	NSK	NSK.. Non-secure EL1 (kernel) modes filtering bit. Controls counting in Non-secure EL1. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, events in Non-secure EL1 are counted. Otherwise, events in Non-secure EL1 are not counted.	

Table 48-964: A55_C2_PMEVTYPER0_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	NSU	NSU.. Non-secure EL0 (Unprivileged) filtering. Controls counting in Non-secure EL0. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of U, events in Non-secure EL0 are counted. Otherwise, events in Non-secure EL0 are not counted.	
27 (R/W)	NSH	NSH.. Non-secure EL2 (Hypervisor) filtering. Controls counting in Non-secure EL2. If EL2 is not implemented, this bit is RES0. 0 Do not count events in EL2. 1 Count events in EL2.	
		0	Do not count events in EL2.
		1	Count events in EL2.
26 (R/W)	M	M.. Secure EL3 filtering bit. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Otherwise, cycles in Secure EL3 are not counted. Most applications can ignore this field and set its value to 0. This field is not visible in the AArch32 PMEVTYPER System register.	
25 (R/W)	MT	MT.. Multithreading. When the implementation is multi-threaded, the valid values for this bit are: 0 Count events only on controlling PE. 1 Count events from any PE with the same affinity at level 1 and above as this PE. When the implementation is not multi-threaded, this bit is RES0. An implementation is described as multi-threaded when the lowest level of affinity consists of logical PEs that are implemented using a multi-threading type approach. That is, the performance of PEs at the lowest affinity level is highly interdependent. On such an implementation, the value of MPIDR_EL1.MT, when read at the highest implemented Exception level, is 1. Events from a different thread of a multithreaded implementation are not Attributable to the thread counting the event.	
		0	Count events only on controlling PE.
		1	Count events from any PE with the same affinity at level 1 and above as this PE.
24:16 (R/W)	RES0_PMEVTYP-ER0_EL0_24_16	0.. Reserved, RES0.	

Table 48-964: A55_C2_PMEVTYPER0_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
15:0 (R/W)	EVTCOUNT	evtCount.. Event to count. The event number of the event that is counted by event counter PMEVCNTR<n>_EL0. Software must program this field with an event that is supported by the PE being programmed. There are three ranges of event numbers: Event numbers in the range 0x0000 to 0x003F are common architectural and microarchitectural events. Event numbers in the range 0x0040 to 0x00BF are ARM recommended common architectural and microarchitectural events. Event numbers in the range 0x0C0 to 0x3FF are IMPLEMENTATION DEFINED events. If evtCount is programmed to an event that is reserved or not supported by the PE, the behavior depends on the event type: For the range 0x000 to 0x03F, no events are counted, and the value returned by a read of the evtCount field is the value written to the field. For IMPLEMENTATION DEFINED events, it is UNPREDICTABLE what event, if any, is counted, and the value returned by a read of the evtCount field is UNKNOWN. UNPREDICTABLE in this case means the event must not expose privileged information. UNPREDICTABLE means the event must not expose privileged information. For IMPLEMENTATION DEFINED events: It is UNPREDICTABLE what event, if any, is counted. UNPREDICTABLE in this case means the event must not expose privileged information. The value read back from evtCount is UNKNOWN. ARM recommends that the behavior across a family of implementations is defined such that if a given implementation does not include an event from a set of common IMPLEMENTATION DEFINED events, then no event is counted and the value read back on evtCount is the value written.

Performance Monitors Event Type Registers.

Configures event counter n, where n is 0 to 30.

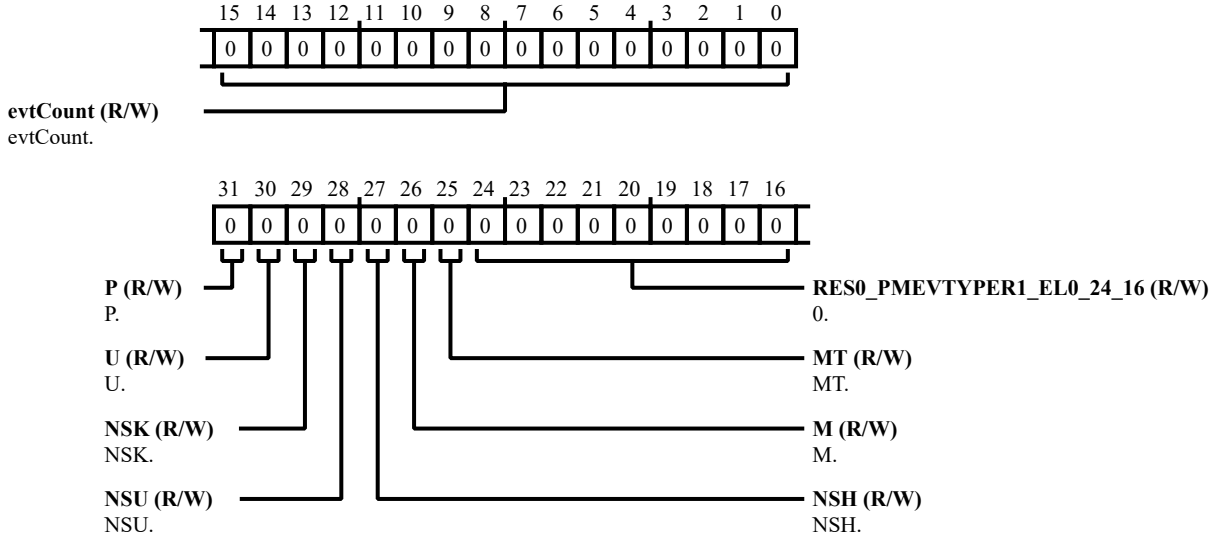

Figure 48-957: A55_C2_PMEVTYPER1_EL0 Register Diagram

Table 48-965: A55_C2_PMEVTYPER1_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	P	P.. Privileged filtering bit. Controls counting in EL1. If EL3 is implemented, then counting in Non-secure EL1 is further controlled by the NSK bit. The possible values of this bit are: 0 Count events in EL1. 1 Do not count events in EL1.	
		0	Count events in EL1.
		1	Do not count events in EL1.
30 (R/W)	U	U.. User filtering bit. Controls counting in EL0. If EL3 is implemented, then counting in Non-secure EL0 is further controlled by the NSU bit. The possible values of this bit are: 0 Count events in EL0. 1 Do not count events in EL0.	
		0	Count events in EL0.
		1	Do not count events in EL0.
29 (R/W)	NSK	NSK.. Non-secure EL1 (kernel) modes filtering bit. Controls counting in Non-secure EL1. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, events in Non-secure EL1 are counted. Otherwise, events in Non-secure EL1 are not counted.	

Table 48-965: A55_C2_PMEVTYPER1_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	NSU	NSU.. Non-secure EL0 (Unprivileged) filtering. Controls counting in Non-secure EL0. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of U, events in Non-secure EL0 are counted. Otherwise, events in Non-secure EL0 are not counted.	
27 (R/W)	NSH	NSH.. Non-secure EL2 (Hypervisor) filtering. Controls counting in Non-secure EL2. If EL2 is not implemented, this bit is RES0. 0 Do not count events in EL2. 1 Count events in EL2.	
		0	Do not count events in EL2.
		1	Count events in EL2.
26 (R/W)	M	M.. Secure EL3 filtering bit. If EL3 is not implemented, this bit is RES0. If the value of this bit is equal to the value of P, cycles in Secure EL3 are counted. Otherwise, cycles in Secure EL3 are not counted. Most applications can ignore this field and set its value to 0. This field is not visible in the AArch32 PMEVTYPER System register.	
25 (R/W)	MT	MT.. Multithreading. When the implementation is multi-threaded, the valid values for this bit are: 0 Count events only on controlling PE. 1 Count events from any PE with the same affinity at level 1 and above as this PE. When the implementation is not multi-threaded, this bit is RES0. An implementation is described as multi-threaded when the lowest level of affinity consists of logical PEs that are implemented using a multi-threading type approach. That is, the performance of PEs at the lowest affinity level is highly interdependent. On such an implementation, the value of MPIDR_EL1.MT, when read at the highest implemented Exception level, is 1. Events from a different thread of a multithreaded implementation are not Attributable to the thread counting the event.	
		0	Count events only on controlling PE.
		1	Count events from any PE with the same affinity at level 1 and above as this PE.
24:16 (R/W)	RES0_PMEVTYP-ER1_EL0_24_16	0.. Reserved, RES0.	

Table 48-965: A55_C2_PMEVTYPER1_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
15:0 (R/W)	EVTCOUNT	evtCount.. Event to count. The event number of the event that is counted by event counter PMEVCNTR<n>_EL0. Software must program this field with an event that is supported by the PE being programmed. There are three ranges of event numbers: Event numbers in the range 0x0000 to 0x003F are common architectural and microarchitectural events. Event numbers in the range 0x0040 to 0x00BF are ARM recommended common architectural and microarchitectural events. Event numbers in the range 0x0C0 to 0x3FF are IMPLEMENTATION DEFINED events. If evtCount is programmed to an event that is reserved or not supported by the PE, the behavior depends on the event type: For the range 0x000 to 0x03F, no events are counted, and the value returned by a read of the evtCount field is the value written to the field. For IMPLEMENTATION DEFINED events, it is UNPREDICTABLE what event, if any, is counted, and the value returned by a read of the evtCount field is UNKNOWN. UNPREDICTABLE in this case means the event must not expose privileged information. UNPREDICTABLE means the event must not expose privileged information. For IMPLEMENTATION DEFINED events: It is UNPREDICTABLE what event, if any, is counted. UNPREDICTABLE in this case means the event must not expose privileged information. The value read back from evtCount is UNKNOWN. ARM recommends that the behavior across a family of implementations is defined such that if a given implementation does not include an event from a set of common IMPLEMENTATION DEFINED events, then no event is counted and the value read back on evtCount is the value written.

Performance Monitors Event Type Registers.

Configures event counter n, where n is 0 to 30.

When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-970: A55_C2_PMINTENCLR_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
24 (R/W)	P24	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.
23 (R/W)	P23	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-970: A55_C2_PMINTENCLR_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
22 (R/W)	P22	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.
21 (R/W)	P21	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-970: A55_C2_PMINTENCLR_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	P20	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.
19 (R/W)	P19	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	P2	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.
1 (R/W)	P1	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-970: A55_C2_PMINTENCLR_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	P0	P<x>.. Event counter overflow interrupt request disable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, disables the PMEVCNTR<x>_EL0 interrupt request.

Performance Monitors Interrupt Enable Set register.

Enables the generation of interrupt requests on overflows from the Cycle Count Register, PMCCNTR_EL0, and the event counters PMEVCNTR0_EL0. Reading the register shows which overflow interrupt requests are enabled.

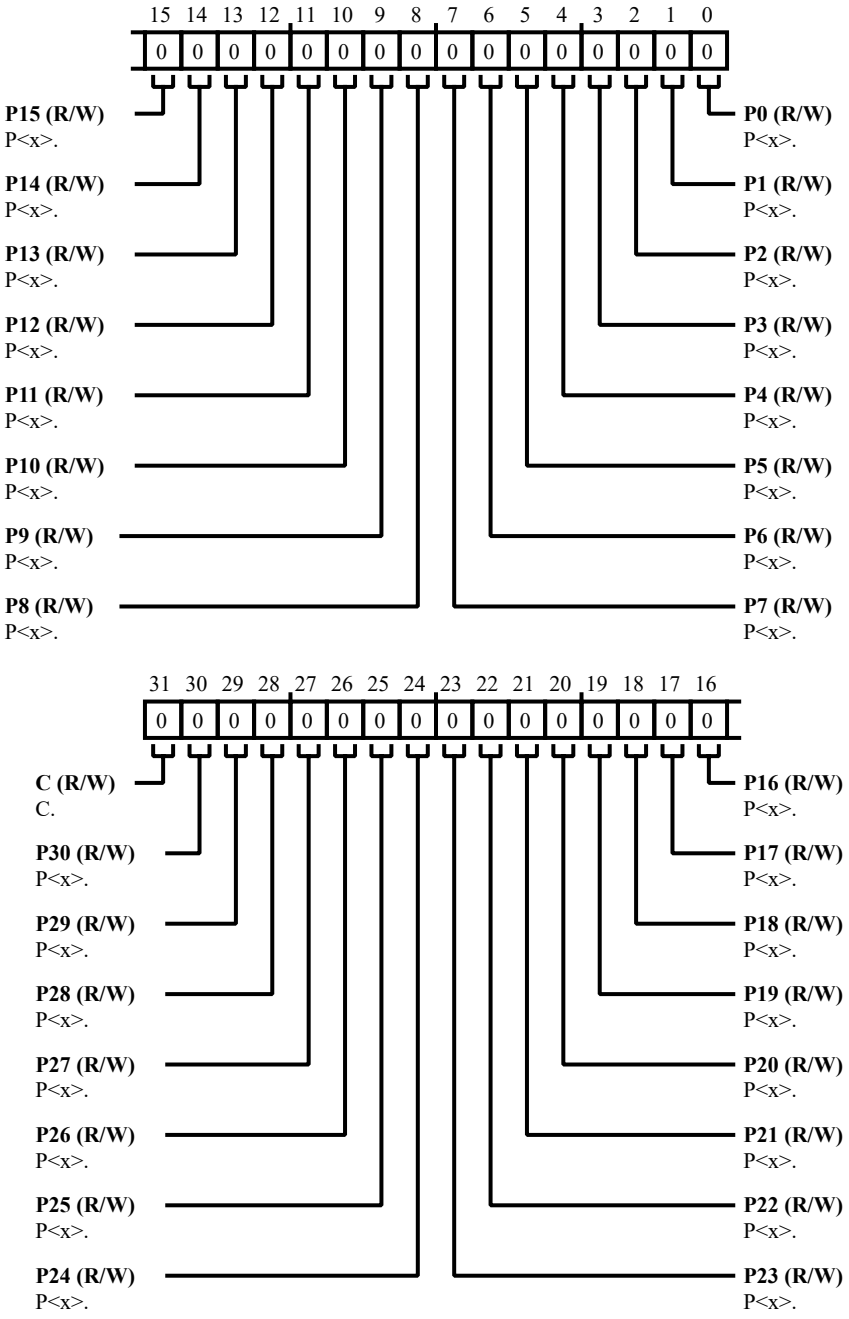

Figure 48-963: A55_C2_PMINTENSET_EL1 Register Diagram

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow interrupt request enable bit. Possible values are: 0 When read, means the cycle counter overflow interrupt request is disabled. When written, has no effect. 1 When read, means the cycle counter overflow interrupt request is enabled. When written, enables the cycle count overflow interrupt request.	
		0	When read, means the cycle counter overflow interrupt request is disabled. When written, has no effect.
		1	When read, means the cycle counter overflow interrupt request is enabled. When written, enables the cycle count overflow interrupt request.
30 (R/W)	P30	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
29 (R/W)	P29	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	P28	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
27 (R/W)	P27	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

26 (R/W)	P26	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
25 (R/W)	P25	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
24 (R/W)	P24	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
23 (R/W)	P23	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
22 (R/W)	P22	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
21 (R/W)	P21	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
20 (R/W)	P20	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
19 (R/W)	P19	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
18 (R/W)	P18	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
17 (R/W)	P17	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Bit No. (Access)	Bit Name	Description/Enumeration	
2 (R/W)	P2	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.
1 (R/W)	P1	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Table 48-971: A55_C2_PMINTENSET_EL1 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
0 (R/W)	P0	P<x>.. Event counter overflow interrupt request enable bit for PMEVCNTR<x>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect. 1 When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.	
		0	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is disabled. When written, has no effect.
		1	When read, means that the PMEVCNTR<x>_EL0 event counter interrupt request is enabled. When written, enables the PMEVCNTR<x>_EL0 interrupt request.

Performance Monitors Integration mode Control register.

Enables the Performance Monitors to switch from default mode into integration mode, where test software can control directly the inputs and outputs of the PE, for integration testing or topology detection.

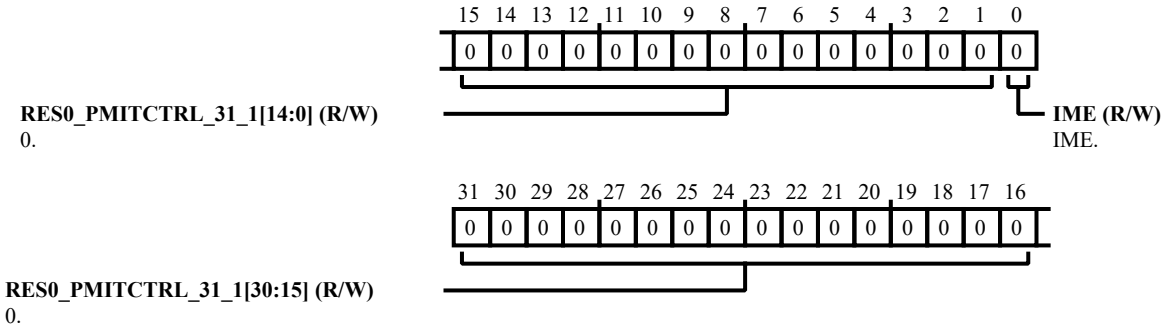

Figure 48-964: A55_C2_PMITCTRL Register Diagram

Table 48-972: A55_C2_PMITCTRL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:1 (R/W)	RES0_PMITCTRL_31_1	0.. Reserved, RES0.	
0 (R/W)	IME	IME.. Integration mode enable. When IME == 1, the device reverts to an integration mode to enable integration testing or topology detection. The integration mode behavior is IMPLEMENTATION DEFINED. 0 Normal operation. 1 Integration mode enabled.	
		0	Normal operation.
		1	Integration mode enabled.

Performance Monitors Overflow Flag Status Clear register.

Contains the state of the overflow bit for the Cycle Count Register, PMCCNTR_EL0, and each of the implemented event counters PMEVCNTR0. Writing to this register clears these bits.

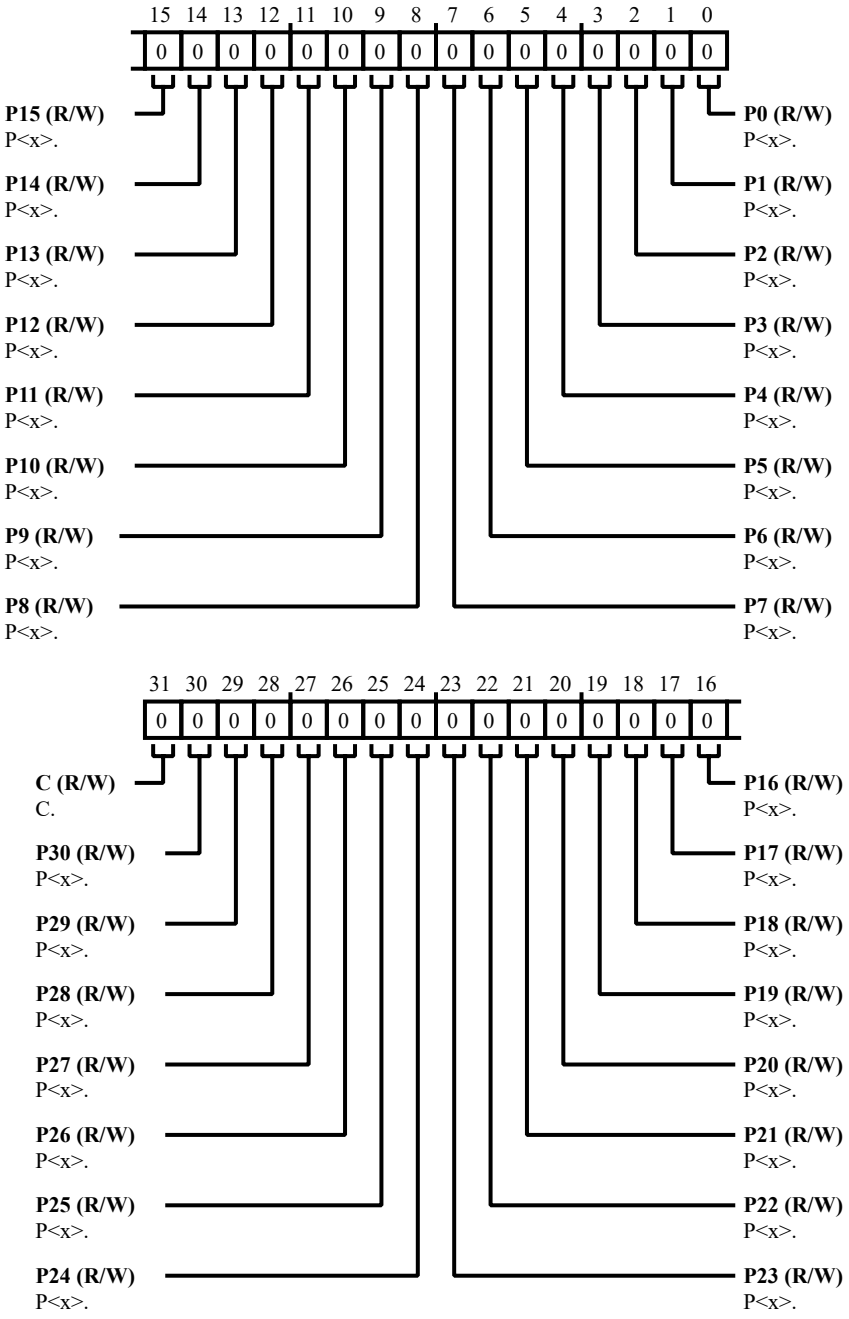

Figure 48-965: A55_C2_PMOVSCLR_EL0 Register Diagram

Table 48-973: A55_C2_PMOVSCLR_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow bit. Possible values are: 0 When read, means the cycle counter has not overflowed. When written, has no effect. 1 When read, means the cycle counter has overflowed. When written, clears the overflow bit to 0. PMCR_EL0.LC controls whether an overflow is detected from PMCCNTR_EL0[31] or from PMCCNTR_EL0[63].	
		0	When read, means the cycle counter has not overflowed. When written, has no effect.
		1	When read, means the cycle counter has overflowed. When written, clears the overflow bit to 0.
30 (R/W)	P30	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
29 (R/W)	P29	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-973: A55_C2_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	P28	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
27 (R/W)	P27	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
26 (R/W)	P26	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-973: A55_C2_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
25 (R/W)	P25	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
24 (R/W)	P24	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
23 (R/W)	P23	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Table 48-973: A55_C2_PMOVSCLR_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
22 (R/W)	P22	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
21 (R/W)	P21	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
20 (R/W)	P20	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/W)	P1	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.
0 (R/W)	P0	P<x>.. Event counter overflow clear bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values of each bit are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<n>_EL0 has overflowed. When written, clears the PMEVCNTR<x> overflow bit to 0.

Performance Monitors Overflow Flag Status Set register.

Sets the state of the overflow bit for the Cycle Count Register, PMCCNTR_EL0, and each of the implemented event counters PMEVCNTR0.

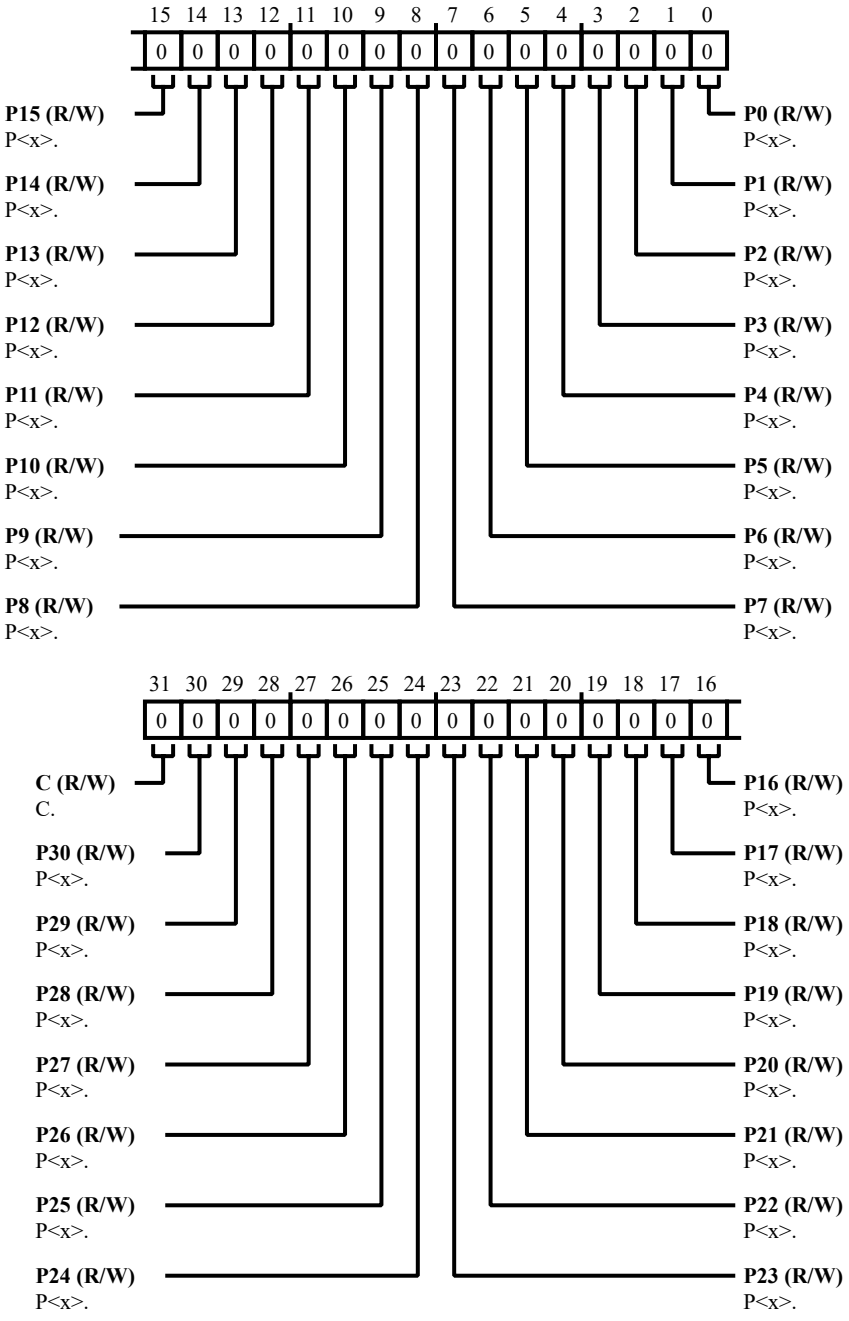

Figure 48-966: A55_C2_PMOVSSET_EL0 Register Diagram

Table 48-974: A55_C2_PMOVSSET_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31 (R/W)	C	C.. PMCCNTR_EL0 overflow bit. Possible values are: 0 When read, means the cycle counter has not overflowed. When written, has no effect. 1 When read, means the cycle counter has overflowed. When written, sets the overflow bit to 1.	
		0	When read, means the cycle counter has not overflowed. When written, has no effect.
		1	When read, means the cycle counter has overflowed. When written, sets the overflow bit to 1.
30 (R/W)	P30	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
29 (R/W)	P29	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-974: A55_C2_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28 (R/W)	P28	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
27 (R/W)	P27	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
26 (R/W)	P26	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

22 (R/W)	P22	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
21 (R/W)	P21	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
20 (R/W)	P20	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Table 48-974: A55_C2_PMOVSSET_EL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
19 (R/W)	P19	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
18 (R/W)	P18	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
17 (R/W)	P17	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Bit No. (Access)	Bit Name	Description/Enumeration	
1 (R/W)	P1	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.
0 (R/W)	P0	P<x>.. Event counter overflow set bit for PMEVCNTR<n>_EL0. Bits [30:N] are RAZ/WI. N is the value in PMCFGR.N. Possible values are: 0 When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect. 1 When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.	
		0	When read, means that PMEVCNTR<n>_EL0 has not overflowed. When written, has no effect.
		1	When read, means that PMEVCNTR<x>_EL0 has overflowed. When written, sets the PMEVCNTR<x> overflow bit to 1.

Performance Monitors Software Increment register.

Increments a counter that is configured to count the Software increment event, event 0x00. For more information, see .

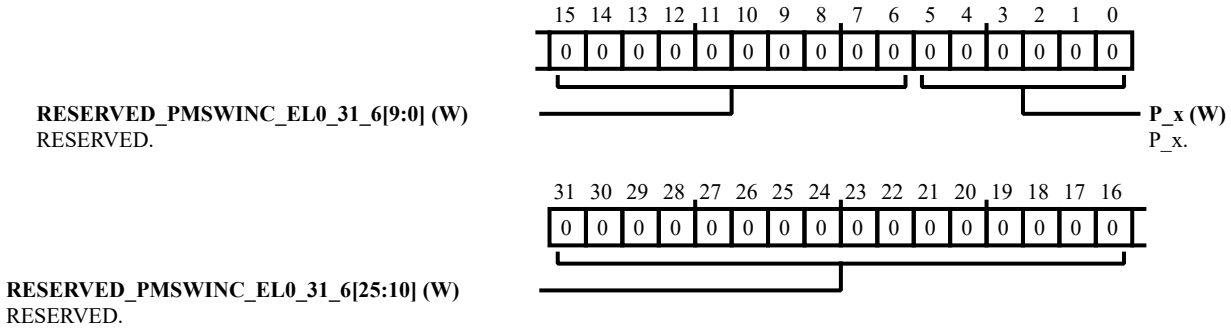

Figure 48-967: A55_C2_PMSWINC_EL0 Register Diagram

Table 48-975: A55_C2_PMSWINC_EL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration	
31:6 (RX/W)	RESERVED_PMSWINC_EL0_31_6	RESERVED.. Reserved RES0.	
		0	Reserved.
5:0 (RX/W)	P_X	P_x.. Event counter software increment bit for PMEVCNTR<x>.	
		0	No action. The write to this bit is ignored.
		1	It is CONSTRAINED UNPREDICTABLE whether a SW_INCR event is generated for event counter x.

49 ADSP-2184x MISCREG Register Descriptions

Misc registers for module are for integration purpose (MISCREG) contains the following registers.

Table 49-1: ADSP-2184x MISCREG Register List

Name	Description
MISCREG_CAN_SYSCTL	CANFD Low Power Selection Mode
MISCREG_CLK_MUX_SEL	Miscellaneous Clock Multiplexer Selection Register
MISCREG_CLK_MUX_SEL1	Miscellaneous Clock Multiplexer Selection 1 Register
MISCREG_ECO_REG1	LPDDR Miscellaneous Register
MISCREG_ECO_REG9	EMAC Error Register
MISCREG_EMAC_MISC_REG	EMAC Miscellaneous Register
MISCREG_EMAC_MISC_REG2	EMAC Miscellaneous Register 2
MISCREG_EMMC_MISC_REG	EMMC MISC Register
MISCREG_MINI_CGU0	MINI CGU0 MISC Register
MISCREG_MINI_CGU1	MINI CGU0 MISC Register
MISCREG_SH0_PFB_RANGE_SELECT	SH0 Prefetch Range Selection Register
MISCREG_SH1_PFB_RANGE_SELECT	SH1 Prefetch Range Selection Register
MISCREG_SHARC_BRIDGE_REMAP	SPORT Direct Interrupt Enable for SH0 and SH1
MISCREG_XSPI1_CTL0	XSPI1 Boot/Init Control Register 0
MISCREG_XSPI1_CTL1	XSPI1 Boot/Init Control Register 1
MISCREG_XSPI1_CTL2	XSPI1 Boot/Init Control Register 2
MISCREG_XSPI1_CTL3	XSPI1 Boot/Init Control Register 3
MISCREG_XSPI1_CTL4	XSPI1 Boot/Init Control Register 4
MISCREG_XSPI1_CTL5	XSPI1 Boot/Init Control Register 5
MISCREG_XSPI1_CTL6	XSPI1 Boot/Init Control Register 6

Table 49-1: ADSP-2184x MISCREG Register List (Continued)

Name	Description
MISCREG_XSPI1_CTL7	XSPI1 Boot/Init Control Register 7
MISCREG_XSPI1_CTL8	XSPI1 Boot/Init Control Register 8
MISCREG_XSPI1_RSTCTL	XSPI1 Boot/Init Reset Control Register
MISCREG_XSPI1_STAT0	XSPI1 Boot/Init Status Register
MISCREG_XSPI_CTL0	XSPI Boot/Init Control Register 0
MISCREG_XSPI_CTL1	XSPI Boot/Init Control Register 1
MISCREG_XSPI_CTL2	XSPI Boot/Init Control Register 2
MISCREG_XSPI_CTL3	XSPI Boot/Init Control Register 3
MISCREG_XSPI_CTL4	XSPI Boot/Init Control Register 4
MISCREG_XSPI_CTL5	XSPI Boot/Init Control Register 5
MISCREG_XSPI_CTL6	XSPI Boot/Init Control Register 6
MISCREG_XSPI_CTL7	XSPI Boot/Init Control Register 7
MISCREG_XSPI_CTL8	XSPI Boot/Init Control Register 8
MISCREG_XSPI_RSTCTL	XSPI Boot/Init Reset Control Register
MISCREG_XSPI_STAT0	XSPI Boot/Init Status Register

CANFD Low Power Selection Mode

The MISCREG_CAN_SYSCTL register contains the control bits for the different low power modes supported in the CANFD module.

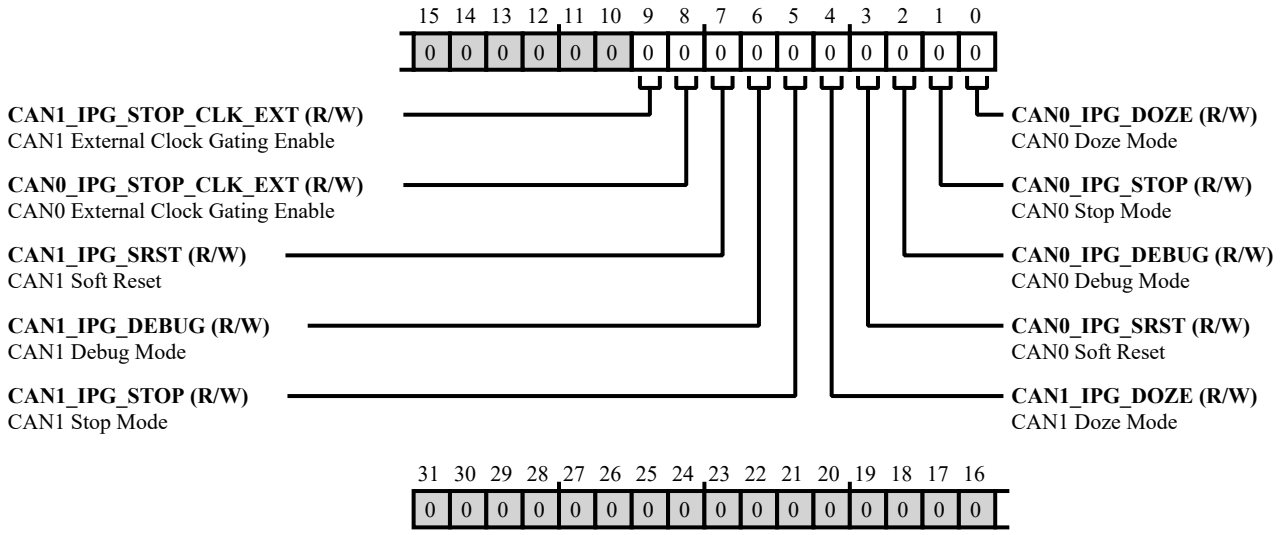

Figure 49-1: MISCREG_CAN_SYSCTL Register Diagram

Table 49-2: MISCREG_CAN_SYSCTL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
9 (R/W)	CAN1_IPG_STOP_CLK_EXT	CAN1 External Clock Gating Enable. When set (=1), the MISCREG_CAN_SYSCTL.CAN1_IPG_STOP_CLK_EXT bit enables external clock gating for stop mode for CAN1.
8 (R/W)	CAN0_IPG_STOP_CLK_EXT	CAN0 External Clock Gating Enable. When set (=1), the MISCREG_CAN_SYSCTL.CAN0_IPG_STOP_CLK_EXT bit enables external clock gating for stop mode for CAN0.
7 (R/W)	CAN1_IPG_SRST	CAN1 Soft Reset. When set (=1), the MISCREG_CAN_SYSCTL.CAN1_IPG_SRST bit enables a soft reset request to CAN1.
6 (R/W)	CAN1_IPG_DEBUG	CAN1 Debug Mode. When set (=1), the MISCREG_CAN_SYSCTL.CAN1_IPG_DEBUG bit enables a debug mode request to CAN1.
5 (R/W)	CAN1_IPG_STOP	CAN1 Stop Mode. When set (=1), the MISCREG_CAN_SYSCTL.CAN1_IPG_STOP bit enables a stop mode request to CAN1.

Table 49-2: MISCREG_CAN_SYSCTL Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
4 (R/W)	CAN1_IPG_DOZE	CAN1 Doze Mode. When set (=1), the `MISCREG_CAN_SYSCTL.CAN1_IPG_DOZE` bit enables a doze mode request to CAN1.
3 (R/W)	CAN0_IPG_SRST	CAN0 Soft Reset. When set (=1), the `MISCREG_CAN_SYSCTL.CAN0_IPG_SRST` bit enables a soft reset request to CAN0.
2 (R/W)	CAN0_IPG_DEBUG	CAN0 Debug Mode. When set (=1), the `MISCREG_CAN_SYSCTL.CAN0_IPG_DEBUG` bit enables a debug mode request to CAN0.
1 (R/W)	CAN0_IPG_STOP	CAN0 Stop Mode. When set (=1), the `MISCREG_CAN_SYSCTL.CAN0_IPG_STOP` bit enables a stop mode request to CAN0.
0 (R/W)	CAN0_IPG_DOZE	CAN0 Doze Mode. When set (=1), the `MISCREG_CAN_SYSCTL.CAN0_IPG_DOZE` bit enables a doze mode request to CAN0.

Miscellaneous Clock Multiplexer Selection Register

The MISCREG_CLK_MUX_SEL register contain the clock multiplex selections.

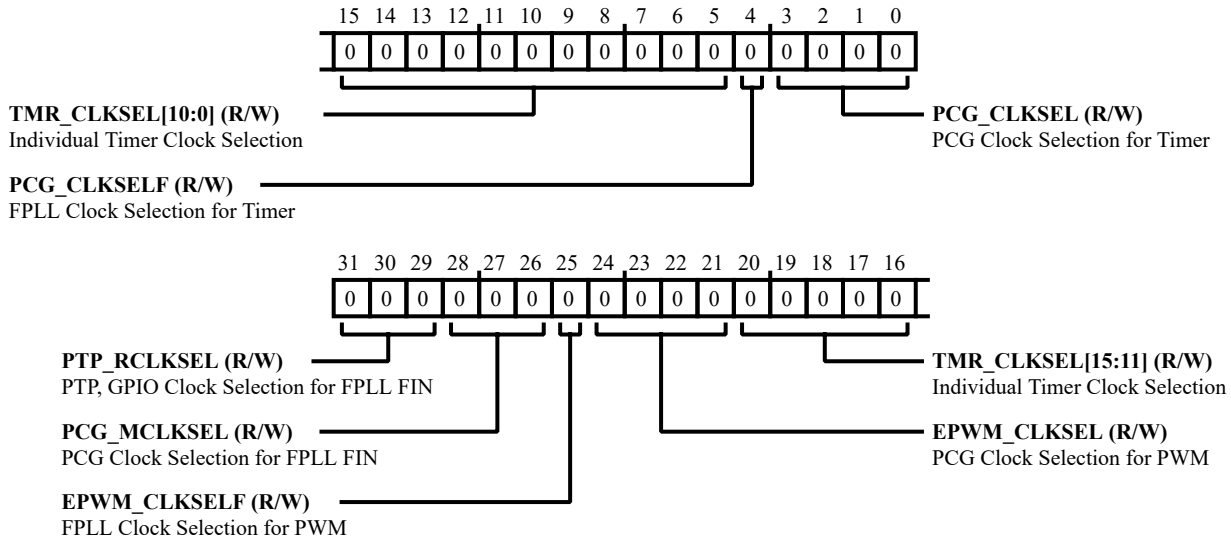

Figure 49-2: MISCREG_CLK_MUX_SEL Register Diagram

Table 49-3: MISCREG_CLK_MUX_SEL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:29 (R/W)	PTP_RCLKSEL	PTP, GPIO Clock Selection for FPLL FIN. The MISCREG_CLK_MUX_SEL.PTP_RCLKSEL bit field indicates the PTP GPIO clock selection for FPLL FIN. 3'b000 - Ext Sync over PA[15] 3'b001 - ETH0 PTPPPS[0] ... 3'b101 - ETH0 PTPPPS[3] 3'b110 - N/A ... 3'b111 - N/A

Table 49-3: MISCREG_CLK_MUX_SEL Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
28:26 (R/W)	PCG_MCLKSEL	PCG Clock Selection for FPLL FIN. The `MISCREG_CLK_MUX_SEL.PCG_MCLKSEL` bit field indicates the PCG clock selection for FPLL FIN. 3'b000 - Ext Clk over DAI0- PCGA 3'b001 - Ext Clk over DAI0- PCGB 3'b010 - Ext Clk over DAI0- PCGE 3'b011 - Ext Clk over DAI0- PCGF 3'b100 - Ext Clk over DAI1- PCGC 3'b101 - Ext Clk over DAI1- PCGD 3'b110 - Ext Clk over DAI1- PCGG 3'b111 - Ext Clk over DAI1- PCGH	
25 (R/W)	EPWM_CLKSELF	FPLL Clock Selection for PWM. The `MISCREG_CLK_MUX_SEL.EPWM_CLKSELF` bit field indicates the FPLL clock selection for PWM.	
		0	FPLL Output Clock
		1	Muxed PCG Clock

Table 49-3: MISCREG_CLK_MUX_SEL Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration	
24:21 (R/W)	EPWM_CLKSEL	PCG Clock Selection for PWM. The `MISCREG_CLK_MUX_SEL.EPWM_CLKSEL` bit field indicates the PCG clock selection for PWM. 4'b0000 - Clock from DAI0- PCGA 4'b0001 - Clock from DAI0- PCGB 4'b0010 - Clock from DAI0- PCGE 4'b0011 - Clock from DAI0- PCGF 4'b0100 - Inverted Clock from DAI0- PCGA 4'b0101 - Inverted Clock from DAI0- PCGB 4'b0110 - Inverted Clock from DAI0- PCGE 4'b0111 - Inverted Clock from DAI0- PCGF 4'b1000 - Clock from DAI1- PCGC 4'b1001 - Clock from DAI1- PCGD 4'b1010 - Clock from DAI1- PCGG 4'b1011 - Clock from DAI1- PCGH 4'b1100 - Inverted Clock from DAI1- PCGC 4'b1101 - Inverted Clock from DAI1- PCGD 4'b1110 - Inverted Clock from DAI1- PCGG 4'b1111 - Inverted Clock from DAI1- PCGH	
20:5 (R/W)	TMR_CLKSEL	Individual Timer Clock Selection. The `MISCREG_CLK_MUX_SEL.TMR_CLKSEL` bit field indicates the input clock for Timer(n) between TM0_ACLK(0) and FPLL output clock or Muxed PCG clock (1), where n = 0 to 15.	
4 (R/W)	PCG_CLKSELF	FPLL Clock Selection for Timer. The `MISCREG_CLK_MUX_SEL.PCG_CLKSELF` bit field indicates the FPLL clock selection for the timer.	
		0	Muxed PCG clock
		1	FPLL Output Clock

Table 49-3: MISCREG_CLK_MUX_SEL Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
3:0 (R/W)	PCG_CLKSEL	PCG Clock Selection for Timer. The `MISCREG_CLK_MUX_SEL.PCG_CLKSEL` bit field indicates the PCG clock selection for the timer. 4'b0000 - Clock from DAI0- PCGA 4'b0001 - Clock from DAI0- PCGB 4'b0010 - Clock from DAI0- PCGE 4'b0011 - Clock from DAI0- PCGF 4'b0100 - Inverted Clock from DAI0- PCGA 4'b0101 - Inverted Clock from DAI0- PCGB 4'b0110 - Inverted Clock from DAI0- PCGE 4'b0111 - Inverted Clock from DAI0- PCGF 4'b1000 - Clock from DAI1- PCGC 4'b1001 - Clock from DAI1- PCGD 4'b1010 - Clock from DAI1- PCGG 4'b1011 - Clock from DAI1- PCGH 4'b1100 - Inverted Clock from DAI1- PCGC 4'b1101 - Inverted Clock from DAI1- PCGD 4'b1110 - Inverted Clock from DAI1- PCGG 4'b1111 - Inverted Clock from DAI1- PCGH

Miscellaneous Clock Multiplexer Selection 1 Register

The MISCREG_CLK_MUX_SEL1 register contain the clock multiplex selections.

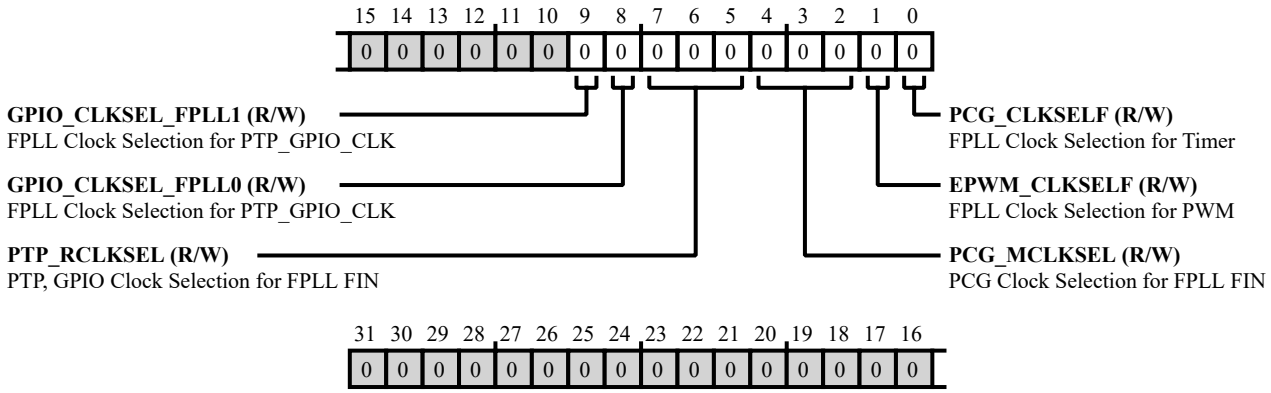

Figure 49-3: MISCREG_CLK_MUX_SEL1 Register Diagram

Table 49-4: MISCREG_CLK_MUX_SEL1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
9 (R/W)	GPIO_CLKSEL_FPLL1	FPLL Clock Selection for PTP_GPIO_CLK. 1'b0 - Muxed PCG clock 1'b1 - FPLL output clock
8 (R/W)	GPIO_CLKSEL_FPLL0	FPLL Clock Selection for PTP_GPIO_CLK. 1'b0 - Muxed PCG clock 1'b1 - FPLL output clock
7:5 (R/W)	PTP_RCLKSEL	PTP, GPIO Clock Selection for FPLL FIN. 3'b000 - Ext Sync over PA[15] 3'b001 - ETH0 PTPPPS[0] ... 3'b101 - ETH0 PTPPPS[3] 3'b110 - N/A ... 3'b111 - N/A
4:2 (R/W)	PCG_MCLKSEL	PCG Clock Selection for FPLL FIN. 3'b000 - Ext Clk over DAI0- PCGA 3'b001 - Ext Clk over DAI0- PCGB 3'b010 - Ext Clk over DAI0- PCGE 3'b011 - Ext Clk over DAI0- PCGF 3'b100 - Ext Clk over DAI1- PCGC 3'b101 - Ext Clk over DAI1- PCGD 3'b110 - Ext Clk over DAI1- PCGG 3'b111 - Ext Clk over DAI1- PCGH
1 (R/W)	EPWM_CLKSELF	FPLL Clock Selection for PWM. 1'b0 - FPLL output clock 1'b1 - Muxed PCG clock
0 (R/W)	PCG_CLKSELF	FPLL Clock Selection for Timer. 1'b0 - Muxed PCG clock 1'b1 - FPLL output clock

LPDDR Miscellaneous Register

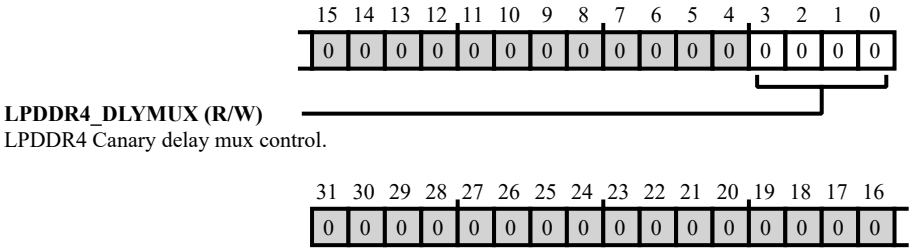

Figure 49-4: MISCREG_ECO_REG1 Register Diagram

Table 49-5: MISCREG_ECO_REG1 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
3:0 (R/W)	LPDDR4_DLYMUX	LPDDR4 Canary delay mux control..

EMAC Error Register

The MISCREG_ECO_REG9 register contains eight Tx channels, eight Rx channels, and DMA errors for the EMAC.

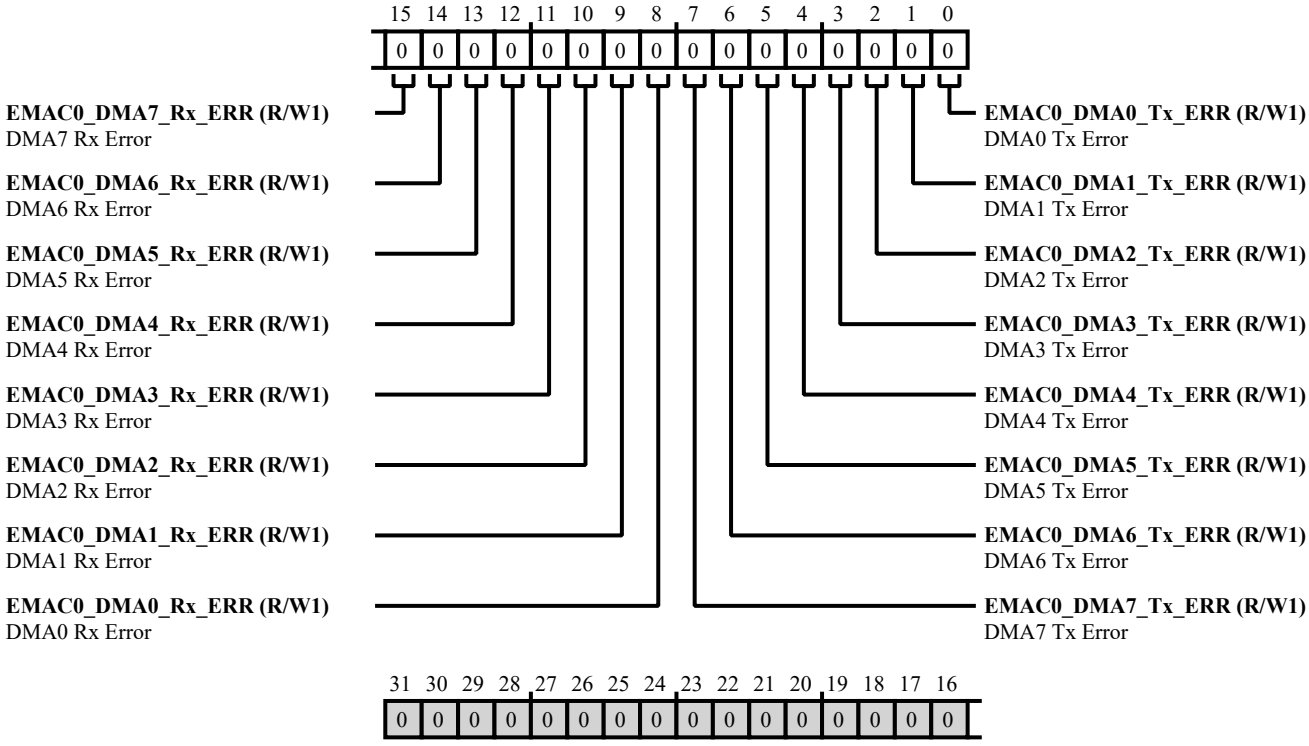

Figure 49-5: MISCREG_ECO_REG9 Register Diagram

Table 49-6: MISCREG_ECO_REG9 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
15 (R/W1)	EMAC0_DMA7_RX_ERR	DMA7 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
14 (R/W1)	EMAC0_DMA6_RX_ERR	DMA6 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
13 (R/W1)	EMAC0_DMA5_RX_ERR	DMA5 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
12 (R/W1)	EMAC0_DMA4_RX_ERR	DMA4 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
11 (R/W1)	EMAC0_DMA3_RX_ERR	DMA3 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.

Table 49-6: MISCREG_ECO_REG9 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
10 (R/W1)	EMAC0_DMA2_RX_ERR	DMA2 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
9 (R/W1)	EMAC0_DMA1_RX_ERR	DMA1 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
8 (R/W1)	EMAC0_DMA0_RX_ERR	DMA0 Rx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
7 (R/W1)	EMAC0_DMA7_TX_ERR	DMA7 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
6 (R/W1)	EMAC0_DMA6_TX_ERR	DMA6 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
5 (R/W1)	EMAC0_DMA5_TX_ERR	DMA5 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
4 (R/W1)	EMAC0_DMA4_TX_ERR	DMA4 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
3 (R/W1)	EMAC0_DMA3_TX_ERR	DMA3 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
2 (R/W1)	EMAC0_DMA2_TX_ERR	DMA2 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
1 (R/W1)	EMAC0_DMA1_TX_ERR	DMA1 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.
0 (R/W1)	EMAC0_DMA0_TX_ERR	DMA0 Tx Error. DMA received a 2nd start (stop) trigger before a stop (start) trigger.

EMAC Miscellaneous Register

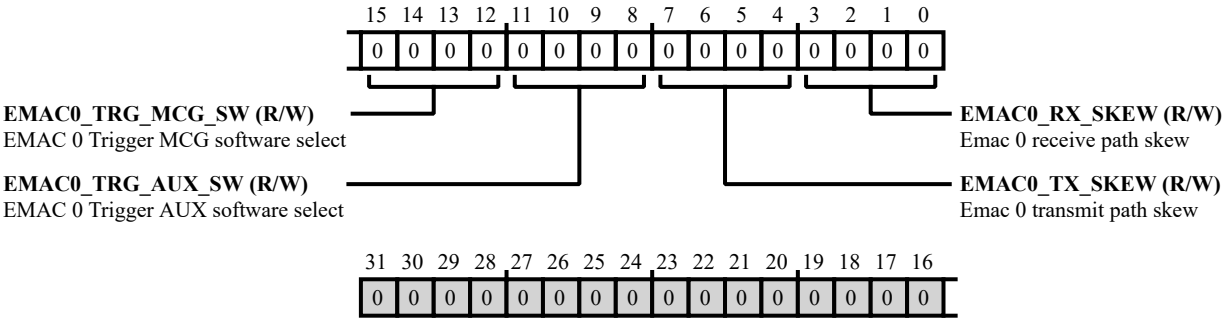

Figure 49-6: MISCREG_EMAC_MISC_REG Register Diagram

Table 49-7: MISCREG_EMAC_MISC_REG Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
15:12 (R/W)	EMAC0_TRG_MCG_SW	EMAC 0 Trigger MCG software select.
11:8 (R/W)	EMAC0_TRG_AUX_SW	EMAC 0 Trigger AUX software select.
7:4 (R/W)	EMAC0_TX_SKEW	Emac 0 transmit path skew.
3:0 (R/W)	EMAC0_RX_SKEW	Emac 0 receive path skew.

EMAC Miscellaneous Register 2

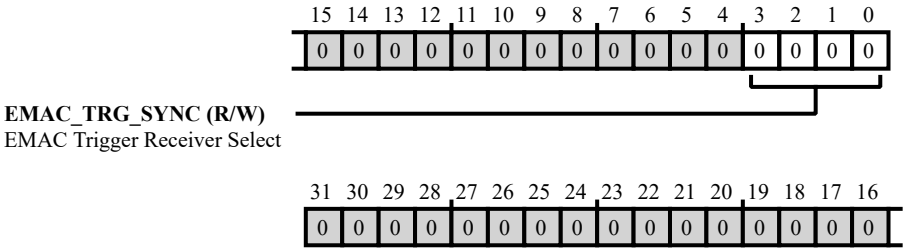

Figure 49-7: MISCREG_EMAC_MISC_REG2 Register Diagram

Table 49-8: MISCREG_EMAC_MISC_REG2 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
3:0 (R/W)	EMAC_TRG_SYNC	EMAC Trigger Receiver Select.

EMMC MISC Register

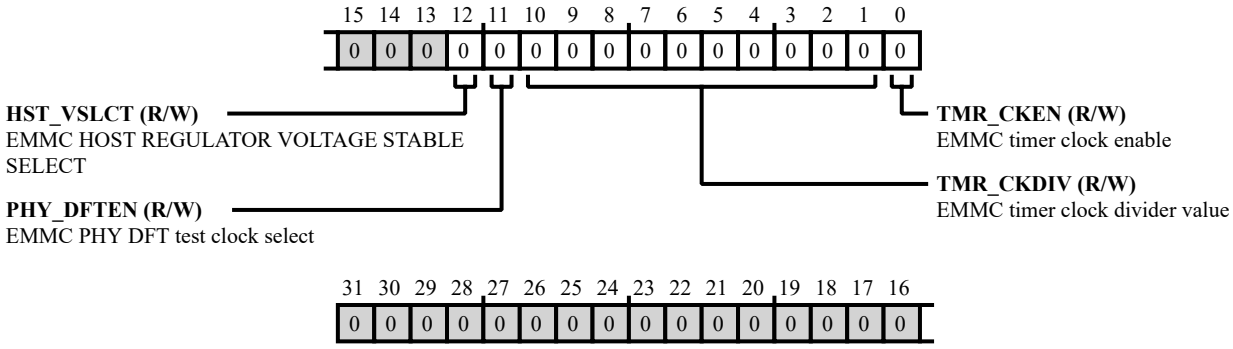

Figure 49-8: MISCREG_EMMC_MISC_REG Register Diagram

Table 49-9: MISCREG_EMMC_MISC_REG Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
12 (R/W)	HST_VSLCT	EMMC HOST REGULATOR VOLTAGE STABLE SELECT.
11 (R/W)	PHY_DFTEN	EMMC PHY DFT test clock select.
10:1 (R/W)	TMR_CKDIV	EMMC timer clock divider value.
0 (R/W)	TMR_CKEN	EMMC timer clock enable.

MINI CGU0 MISC Register

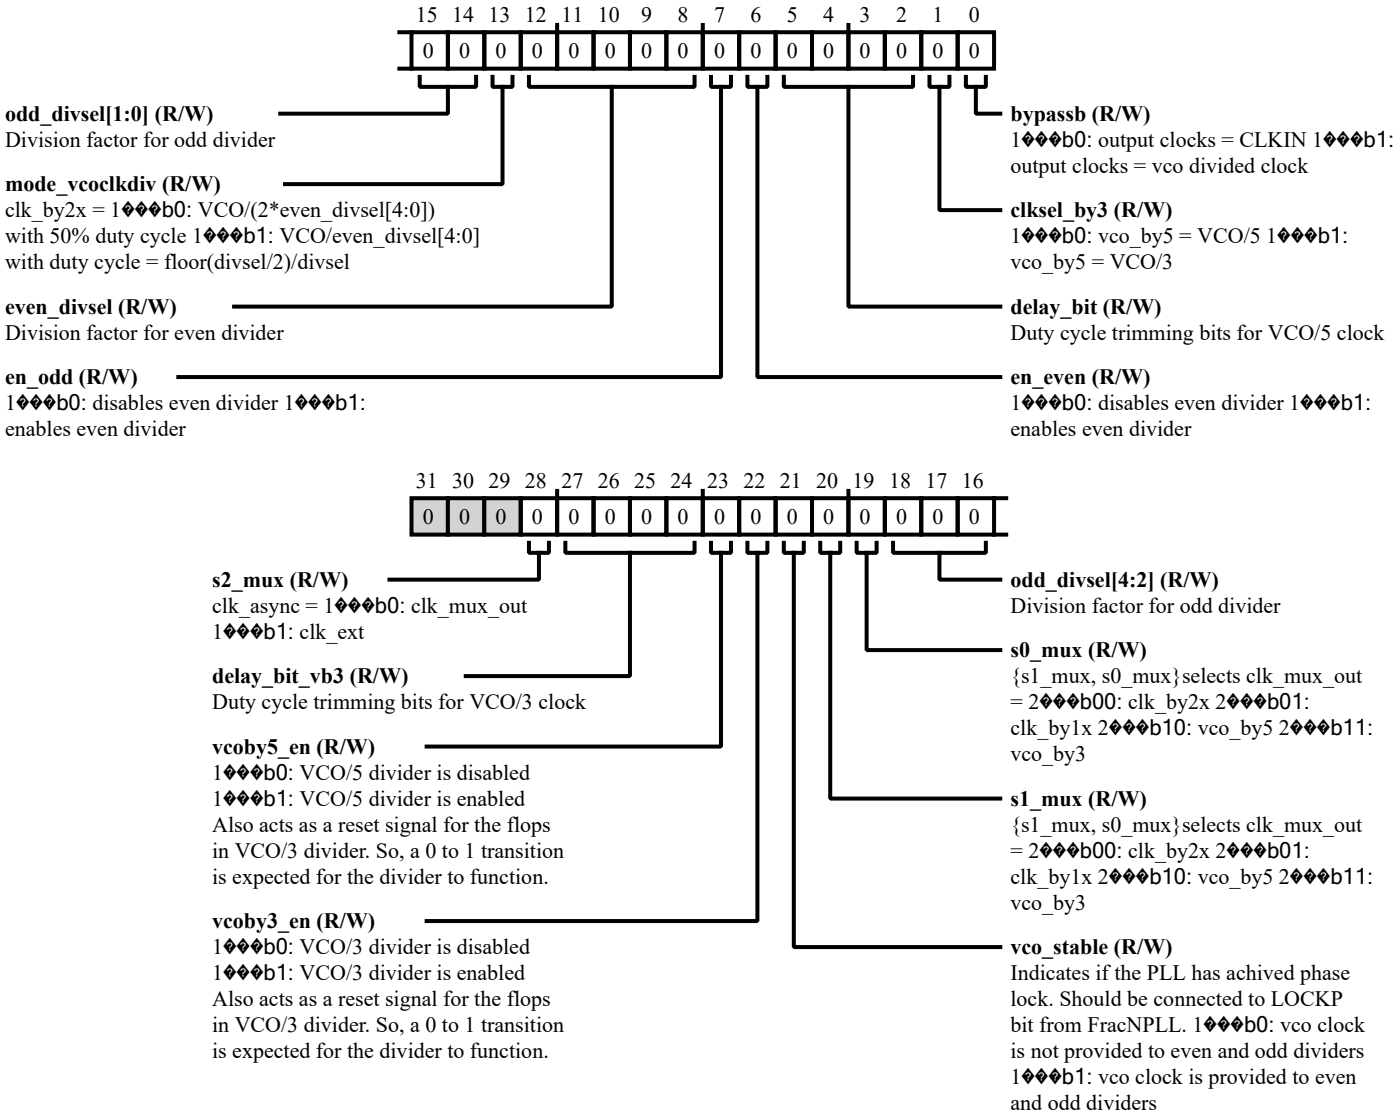

Figure 49-9: MISCREG_MINI_CGU0 Register Diagram

Table 49-10: MISCREG_MINI_CGU0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
28 (R/W)	S2_MUX	clk_async = 1b0: clk_mux_out 1b1: clk_ext.
27:24 (R/W)	DELAY_BIT_VB3	Duty cycle trimming bits for VCO/3 clock.

Table 49-10: MISCREG_MINI_CGU0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
23 (R/W)	VCOBY5_EN	1b0: VCO/5 divider is disabled 1b1: VCO/5 divider is enabled Also acts as a reset signal for the flops in VCO/3 divider. So, a 0 to 1 transition is expected for the divider to function..
22 (R/W)	VCOBY3_EN	1b0: VCO/3 divider is disabled 1b1: VCO/3 divider is enabled Also acts as a reset signal for the flops in VCO/3 divider. So, a 0 to 1 transition is expected for the divider to function..
21 (R/W)	VCO_STABLE	Indicates if the PLL has achived phase lock. Should be connected to LOCKP bit from FracNPLL. 1b0: vco clock is not provided to even and odd dividers 1b1: vco clock is provided to even and odd dividers.
20 (R/W)	S1_MUX	{s1_mux, s0_mux}selects clk_mux_out = 2b00: clk_by2x 2b01: clk_by1x 2b10: vco_by5 2b11: vco_by3.
19 (R/W)	S0_MUX	{s1_mux, s0_mux}selects clk_mux_out = 2b00: clk_by2x 2b01: clk_by1x 2b10: vco_by5 2b11: vco_by3.
18:14 (R/W)	ODD_DIVSEL	Division factor for odd divider.
13 (R/W)	MODE_VCOCLKDIV	clk_by2x = 1b0: VCO/(2*even_divsel[4:0]) with 50% duty cycle 1b1: VCO/even_divsel[4:0] with duty cycle = floor(divsel/2)/divsel.
12:8 (R/W)	EVEN_DIVSEL	Division factor for even divider.
7 (R/W)	EN_ODD	1b0: disables even divider 1b1: enables even divider.
6 (R/W)	EN_EVEN	1b0: disables even divider 1b1: enables even divider.
5:2 (R/W)	DELAY_BIT	Duty cycle trimming bits for VCO/5 clock.
1 (R/W)	CLKSEL_BY3	1b0: vco_by5 = VCO/5 1b1: vco_by5 = VCO/3.
0 (R/W)	BYPASSB	1b0: output clocks = CLKIN 1b1: output clocks = vco divided clock.

1 (R/W)	CLKSEL_BY3	1b0: vco_by5 = VCO/5 1b1: vco_by5 = VCO/3.
0 (R/W)	BYPASSB	1b0: output clocks = CLKIN 1b1: output clocks = vco divided clock.

SH0 Prefetch Range Selection Register

In the MISCREG_SH0_PFB_RANGE_SELECT register, each bit field controls if the corresponding address range will be prefetched. When an address range is set it is prefetched and when it is zero there is no prefetch.

The MISCREG_SH0_PFB_RANGE_SELECT[31:16] bits control the range selection for the instruction cache, and MISCREG_SH0_PFB_RANGE_SELECT[15:0] bits control the range selection for the data cache.

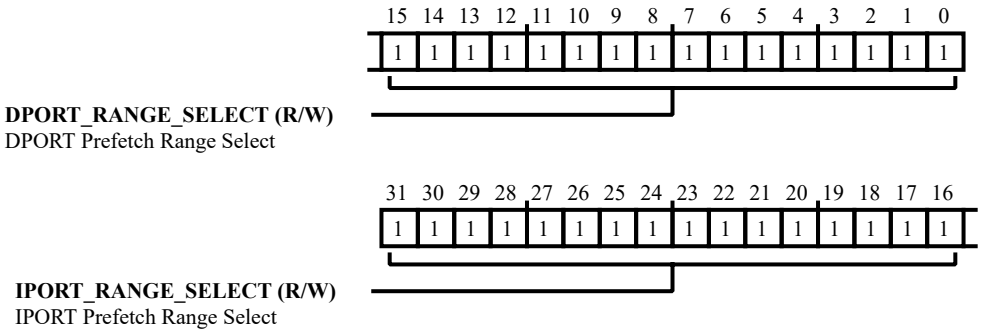

Figure 49-11: MISCREG_SH0_PFB_RANGE_SELECT Register Diagram

Table 49-12: MISCREG_SH0_PFB_RANGE_SELECT Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	IPORT_RANGE_SELECT	IPORT Prefetch Range Select. The MISCREG_SH0_PFB_RANGE_SELECT.IPORT_RANGE_SELECT bit field indicates the prefetch range selection for IPORT.
15:0 (R/W)	DPORT_RANGE_SELECT	DPORT Prefetch Range Select. The MISCREG_SH0_PFB_RANGE_SELECT.DPORT_RANGE_SELECT bit field indicates the prefetch range selection for DPORT.

SH1 Prefetch Range Selection Register

Each bit field controls if the corresponding address range will be prefetched. When an address range is set it is prefetched an when it is zero there is no prefetch.

The MISCREG_SH1_PFB_RANGE_SELECT[31:16] bits control the range selection for the instruction cache, and MISCREG_SH1_PFB_RANGE_SELECT[15:0] bits control the range selection for the data cache.

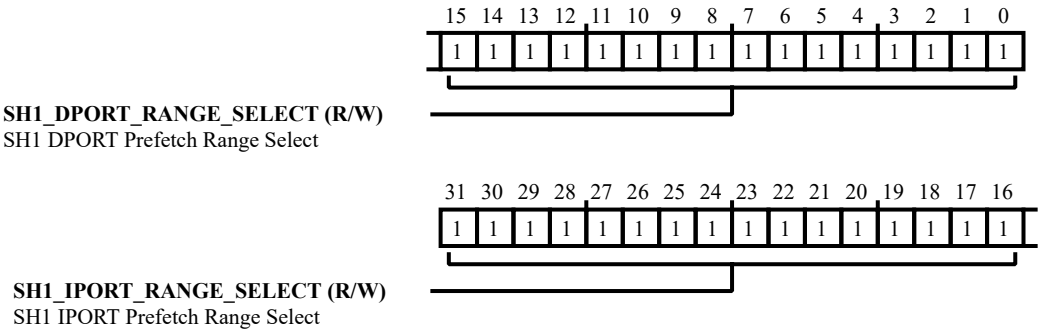

Figure 49-12: MISCREG_SH1_PFB_RANGE_SELECT Register Diagram

Table 49-13: MISCREG_SH1_PFB_RANGE_SELECT Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:16 (R/W)	SH1_IPORT_RANGE_SELECT	SH1 IPORT Prefetch Range Select. The MISCREG_SH1_PFB_RANGE_SELECT.SH1_IPORT_RANGE_SELECT bit field indicates the prefetch range selection for IPORT.
15:0 (R/W)	SH1_DPORT_RANGE_SELECT	SH1 DPORT Prefetch Range Select. The MISCREG_SH1_PFB_RANGE_SELECT.SH1_DPORT_RANGE_SELECT bit field indicates the prefetch range selection for DPORT.

SPORT Direct Interrupt Enable for SH0 and SH1

The bits in the MISCREG_SHARC_BRIDGE_REMAP register control the direct connection of SPORT interrupts to the SHARC core.

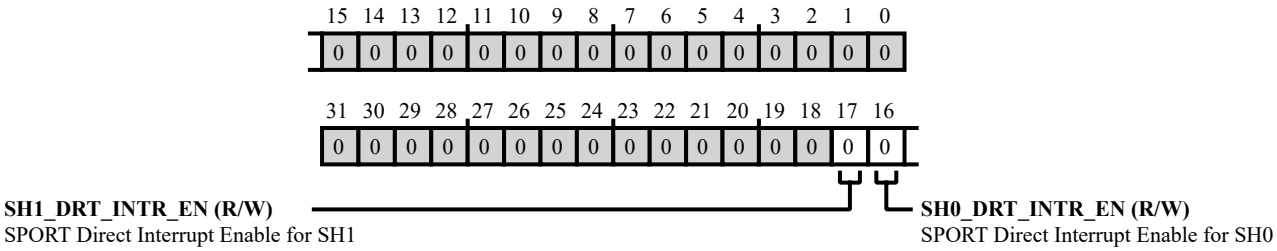

Figure 49-13: MISCREG_SHARC_BRIDGE_REMAP Register Diagram

Table 49-14: MISCREG_SHARC_BRIDGE_REMAP Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
17 (R/W)	SH1_DRT_INTR_EN	SPORT Direct Interrupt Enable for SH1. If the MISCREG_SHARC_BRIDGE_REMAP.SH1_DRT_INTR_EN bit is set a direct connection is enabled for SH1. Do not set the MISCREG_SHARC_BRIDGE_REMAP.SH1_DRT_INTR_EN bit when IIR1 of the SH1 is in use. If this bit is zero the direct connection is disabled.
16 (R/W)	SH0_DRT_INTR_EN	SPORT Direct Interrupt Enable for SH0. If the MISCREG_SHARC_BRIDGE_REMAP.SH0_DRT_INTR_EN bit is set a direct connection is enabled for SH0. Do not set the MISCREG_SHARC_BRIDGE_REMAP.SH0_DRT_INTR_EN bit when IIR1 of the SH0 is in use. If this bit is zero the direct connection is disabled.

XSPI1 Boot/Init Control Register 0

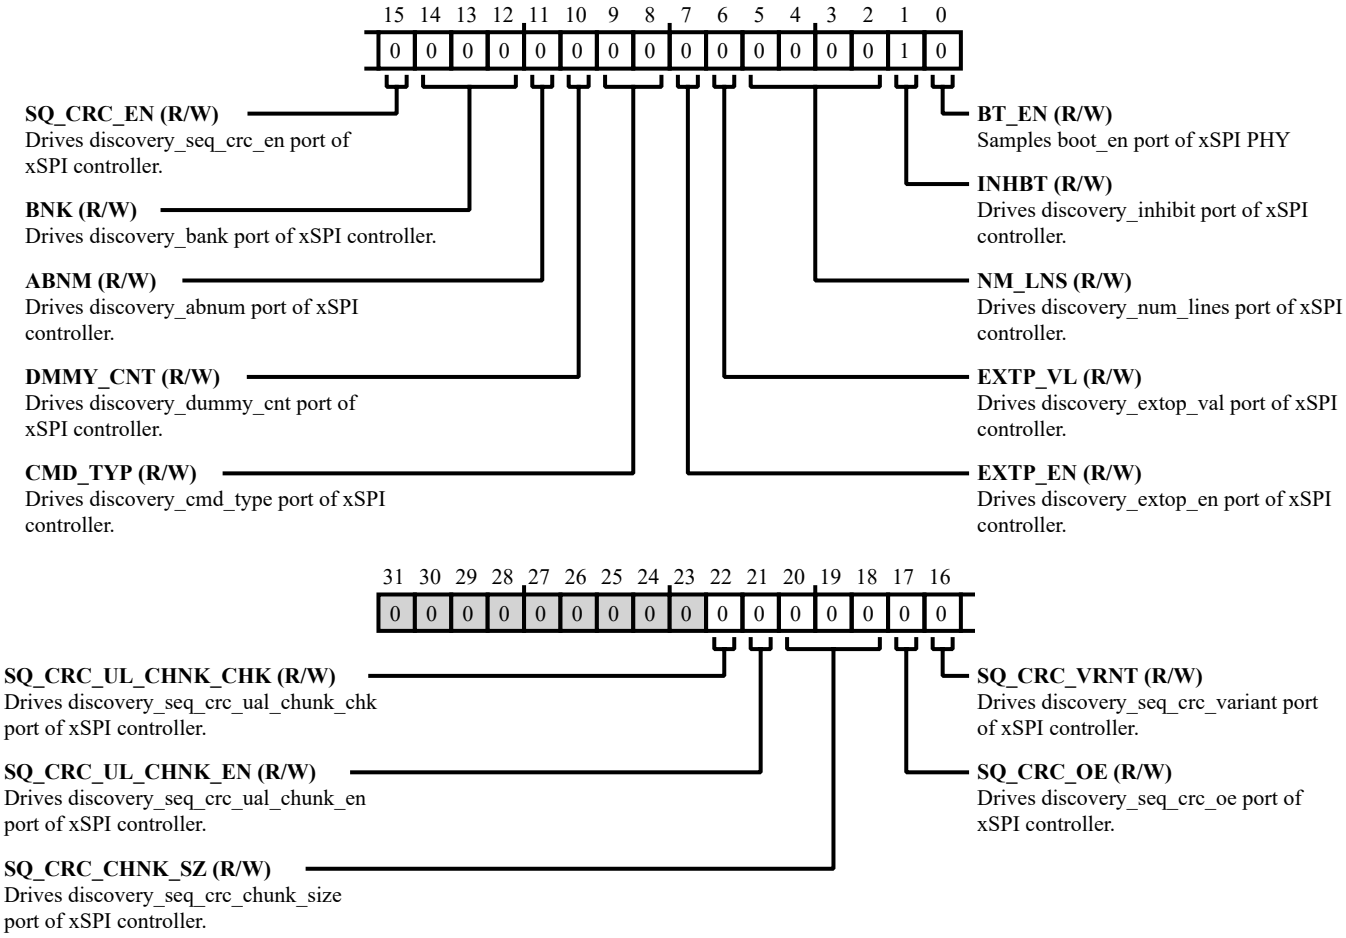

Figure 49-14: MISCREG_XSPI1_CTL0 Register Diagram

Table 49-15: MISCREG_XSPI1_CTL0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
22 (R/W)	SQ_CRC_UL_CHNK_CHK	Drives discovery_seq_crc_ual_chunk_chk port of xSPI controller..
21 (R/W)	SQ_CRC_UL_CHNK_EN	Drives discovery_seq_crc_ual_chunk_en port of xSPI controller..
20:18 (R/W)	SQ_CRC_CHNK_SZ	Drives discovery_seq_crc_chunk_size port of xSPI controller..
17 (R/W)	SQ_CRC_OE	Drives discovery_seq_crc_oe port of xSPI controller..

Table 49-15: MISCREG_XSPI1_CTL0 Register Fields (Continued)

Bit No. (Access)	Bit Name	Description/Enumeration
16 (R/W)	SQ_CRC_VRNT	Drives discovery_seq_crc_variant port of xSPI controller..
15 (R/W)	SQ_CRC_EN	Drives discovery_seq_crc_en port of xSPI controller..
14:12 (R/W)	BNK	Drives discovery_bank port of xSPI controller..
11 (R/W)	ABNM	Drives discovery_abnum port of xSPI controller..
10 (R/W)	DMMY_CNT	Drives discovery_dummy_cnt port of xSPI controller..
9:8 (R/W)	CMD_TYP	Drives discovery_cmd_type port of xSPI controller..
7 (R/W)	EXTP_EN	Drives discovery_extop_en port of xSPI controller..
6 (R/W)	EXTP_VL	Drives discovery_extop_val port of xSPI controller..
5:2 (R/W)	NM_LNS	Drives discovery_num_lines port of xSPI controller..
1 (R/W)	INHBT	Drives discovery_inhibit port of xSPI controller..
0 (R/W)	BT_EN	Samples boot_en port of xSPI PHY.

Table 49-32: MISCREG_XSPI_CTL6 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
31:0 (R/W)	PHY_DLL_COMP_CTRL	Drives init_phy_dll_comp_ctrl_reg Port of xSPI Controller.

XSPI Boot/Init Control Register 7

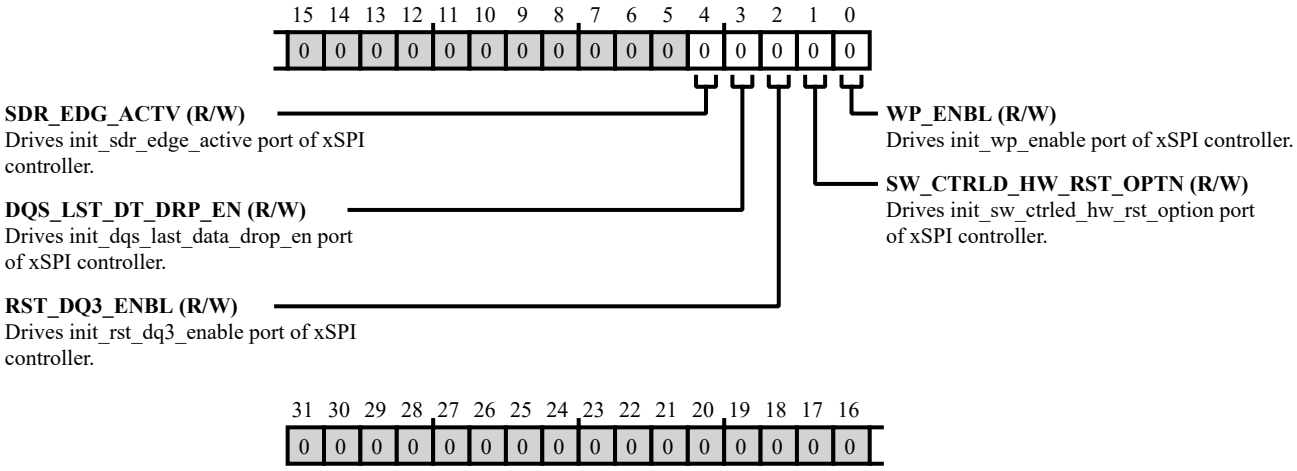

Figure 49-32: MISCREG_XSPI_CTL7 Register Diagram

Table 49-33: MISCREG_XSPI_CTL7 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
4 (R/W)	SDR_EDG_ACTV	Drives init_sdr_edge_active port of xSPI controller..
3 (R/W)	DQS_LST_DT_DRP_EN	Drives init_dqs_last_data_drop_en port of xSPI controller..
2 (R/W)	RST_DQ3_ENBL	Drives init_rst_dq3_enable port of xSPI controller..
1 (R/W)	SW_CTRLD_HW_RST_OPTN	Drives init_sw_ctrled_hw_rst_option port of xSPI controller..
0 (R/W)	WP_ENBL	Drives init_wp_enable port of xSPI controller..

XSPI Boot/Init Control Register 8

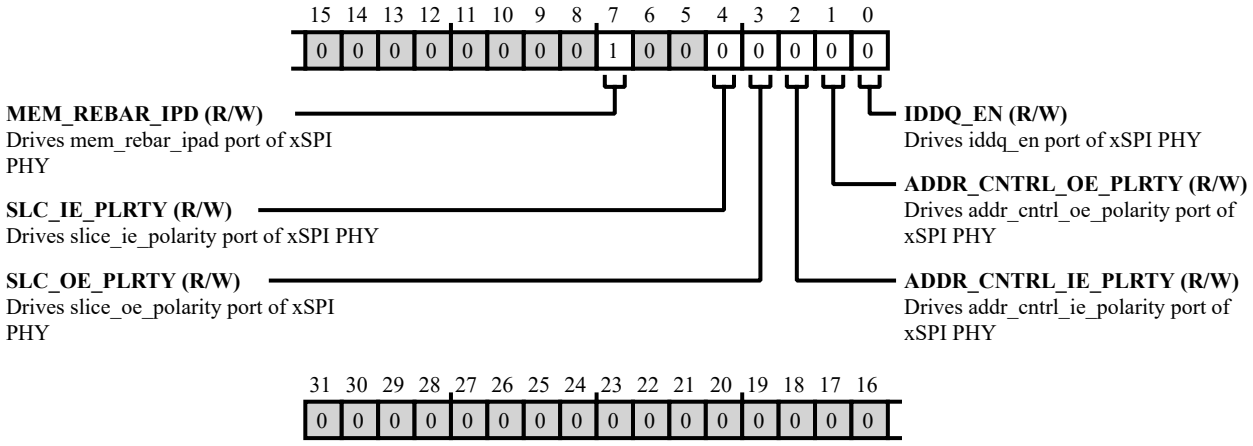

Figure 49-33: MISCREG_XSPI_CTL8 Register Diagram

Table 49-34: MISCREG_XSPI_CTL8 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
7 (R/W)	MEM_REBAR_IPD	Drives mem_rebar_ipad port of xSPI PHY.
4 (R/W)	SLC_IE_PLRTY	Drives slice_ie_polarity port of xSPI PHY.
3 (R/W)	SLC_OE_PLRTY	Drives slice_oe_polarity port of xSPI PHY.
2 (R/W)	ADDR_CNTRL_IE_PLRTY	Drives addr_cntrl_ie_polarity port of xSPI PHY.
1 (R/W)	ADDR_CNTRL_OE_PLRTY	Drives addr_cntrl_oe_polarity port of xSPI PHY.
0 (R/W)	IDDQ_EN	Drives iddq_en port of xSPI PHY.

XSPI Boot/Init Reset Control Register

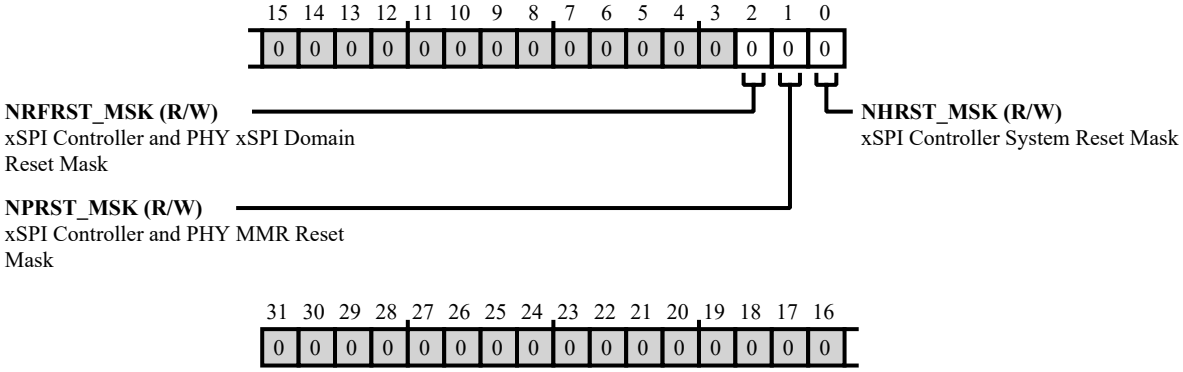

Figure 49-34: MISCREG_XSPI_RSTCTL Register Diagram

Table 49-35: MISCREG_XSPI_RSTCTL Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
2 (R/W)	NRFRST_MSK	xSPI Controller and PHY xSPI Domain Reset Mask.
1 (R/W)	NPRST_MSK	xSPI Controller and PHY MMR Reset Mask.
0 (R/W)	NHRST_MSK	xSPI Controller System Reset Mask.

XSPI Boot/Init Status Register

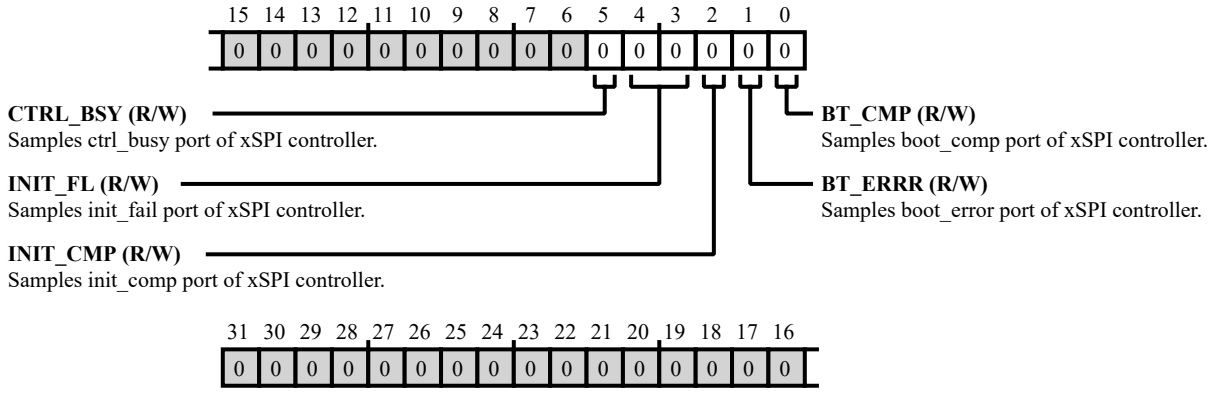

Figure 49-35: MISCREG_XSPI_STAT0 Register Diagram

Table 49-36: MISCREG_XSPI_STAT0 Register Fields

Bit No. (Access)	Bit Name	Description/Enumeration
5 (R/W)	CTRL_BSY	Samples ctrl_busy port of xSPI controller..
4:3 (R/W)	INIT_FL	Samples init_fail port of xSPI controller..
2 (R/W)	INIT_CMP	Samples init_comp port of xSPI controller..
1 (R/W)	BT_ERRR	Samples boot_error port of xSPI controller..
0 (R/W)	BT_CMP	Samples boot_comp port of xSPI controller..

Appendix A ADSP-2184x Register List

This appendix lists Memory-Mapped Register address and register names. The modules are presented in alphabetical order.

Table A-1: ADSP-2184x A55_CLUSTER MMR Register Addresses

Memory Mapped Address	Register Name	Description	Reset Value
0x31110000	A55_CLUSTER_ROMENTRY0	A55_CLUSTER ROM Table Entry 0 Register	0x00001002
0x31110004	A55_CLUSTER_ROMENTRY1	A55_CLUSTER ROM Table Entry 1 Register	0x00002002
0x31110008	A55_CLUSTER_ROMENTRY2	A55_CLUSTER ROM Table Entry 2 Register	0x00004003
0x3111000C	A55_CLUSTER_ROMENTRY3	A55_CLUSTER ROM Table Entry 3 Register	0x00005003
0x31110010	A55_CLUSTER_ROMENTRY4	A55_CLUSTER ROM Table Entry 4 Register	0x00000002
0x31110014	A55_CLUSTER_ROMENTRY5	A55_CLUSTER ROM Table Entry 5 Register	0x00000002
0x31110018	A55_CLUSTER_ROMENTRY6	A55_CLUSTER ROM Table Entry 6 Register	0x00008002
0x3111001C	A55_CLUSTER_ROMENTRY7	A55_CLUSTER ROM Table Entry 7 Register	0x00009002
0x31110020	A55_CLUSTER_ROMENTRY8	A55_CLUSTER ROM Table Entry 8 Register	0x00000002
0x31110024	A55_CLUSTER_ROMENTRY9	A55_CLUSTER ROM Table Entry 9 Register	0x00000002
0x31110028	A55_CLUSTER_ROMENTRY10	A55_CLUSTER ROM Table Entry 10 Register	0x0000C003
0x3111002C	A55_CLUSTER_ROMENTRY11	A55_CLUSTER ROM Table Entry 11 Register	0x0000D003
0x31110030	A55_CLUSTER_ROMENTRY12	A55_CLUSTER ROM Table Entry 12 Register	0x00000002
