SOLUTIONS FOR RAPID PROTOTYPING
Answering the Needs of Practicing Engineers

Analog Devices participates in many vibrant hardware and software ecosystems, from Arduino to Pmod. Rapidly make your prototype and test your concepts. ADI’s reference designs support many different applications and technologies, and include everything from hardware to embedded firmware that makes it easier for engineers to get their product concepts up and running fast.

Arduino Shields
Arduino shields are a popular hardware form factor that was first standardized by Arduino, and typically refer to being mechanically and electrically compatible with the Arduino Uno Rev 3 board. Many different FPGA, microprocessor, and DSP vendors provide plug and play connectivity into their development boards and environments using this form factor. Arduino shields provide analog and digital pins to configure devices and digitize signals coming from the real world. The digital communications protocols supported by Arduino shields are SPI, I2C, UART, PWM, and GPIO. All the below boards are compatible with either the EVAL-ADICUP360 or EVAL-ADICUP3029 and should work with any compatible Arduino form factor microcontroller platform. All software is open source and can be found on github.com/analogdevicesinc.

Water Quality Measurement System
- Measure from 1 to 4 sensor channels
- Selectable SPI, FC, or UART communication
- 10-pin JTAG/SWD connector for easy programming
- Visit analog.com/EVAL-CN0428-EBZ

Water Turbidity Measurement System
- 0 FTU to 1000 FTU measurement range
- ±0.5 FTU system accuracy (up to 1000 FTU)
- Integrated ambient light rejection
- Visit analog.com/EVAL-CN0409-ARDZ

Total Dissolved Solids Measurement System
- Temperature compensation
- 1 μs to 1 s measurement range
- Standard BNC conductivity probe connector
- Visit analog.com/EVAL-CN0411-ARDZ

Ultra Low Power Accelerometer with Display
- Ultra low power sleep and wake-up modes
- Programmable acceleration ranges
- Board mounted LCD display
- Visit analog.com/EVAL-ADXL362-ARDZ

Micropower, 3-Axis, ±200 g Digital Output MEMS
- Ultra low power sleep and wake-up modes
- ±200 g measurement range
- Adjustable high-pass filter
- Visit analog.com/EVAL-ADXL372-ARDZ

Dual Electrochemical Gas Detector
- Temperature compensation
- Work with industry-standard gas sensors
- Programmable for a variety of gases
- Visit analog.com/EVAL-CN0396-ARDZ

NDIR Thermopile-Based Gas Sensing Design
- Optimized for CO2 gas
- Single supply
- Visit analog.com/EVAL-CN0338-ARDZ

Electrochemical Toxic Gas Detection
- Programmable for multiple other gases
- Resolution down to 1 ppm
- Low power, single-supply operation
- Visit analog.com/EVAL-CN0357-ARDZ

Multichannel Electrochemical Gas Detector
- 3- or 4-wire electrochemical gas sensors
- Gas sensor diagnostics and life expectancy
- Temperature and humidity compensation
- Visit analog.com/EVAL-CN0429-EBZ

Volatile Organic Compound Gas Detection
- Temperature and humidity compensation
- Can be used with multiple sensor types
- Low power
- Visit analog.com/EVAL-CN0395-ARDZ

## Pmod

The Pmod™ (peripheral module)-compatible interface is an open standard by Digilent (a National Instruments Company) for peripherals used with FPGAs or microcontroller development boards.

The modules are available from simple push buttons to more complex modules with analog-to-digital converters (ADCs), digital-to-analog converters (DACs), or LCD displays. These modules can be used with a variety of FPGA or microcontroller development boards from different vendors and support major digital communication protocols such as SPI, I2C, and UART. Pmod-compatible interfaces normally have additional software drivers and configuration is required. All software is open source and can be found on [github.com/analogdevicesinc](github.com/analogdevicesinc).

---

**Low Power, Low Noise 3-Axis Digital Output Accelerometer**

- 20-bit ADC resolution
- Programmable high- and low-pass digital filters
- Low power (200 µA in measurement mode and 21 µA in standby mode)
- Visit [analog.com/EVAL-ADXL355-PMDZ](analog.com/EVAL-ADXL355-PMDZ)

**±0.25°C Accurate Digital Temperature Sensor**

- 16-bit digital temperature resolution
- PC interface for up to 4 nodes on a single bus
- Low power (700 µW at 3.3 V normal mode, 7 µW at 3.3 V in shutdown mode)
- Visit [analog.com/EVAL-ADT7420-PMDZ](analog.com/EVAL-ADT7420-PMDZ)
PMOD (Continued)

Programmable 4 mA to 20 mA Current Loop Transmitter
- Low power
- 12-, 14-, 16-bit resolution control
- Visit analog.com/EVAL-CN0179-PMDZ

Fully Isolated, ±10 V Data Acquisition System
- Galvanically isolated from processor
- Standard ±10 V industrial input
- Works from single 3.3 V supply
- Visit analog.com/EVAL-CN0335-PMDZ

Fully Isolated, 4 mA to 20 mA Data Acquisition System
- Galvanically isolated from processor
- Standard 4 mA to 20 mA industrial input
- Works from single 3.3 V supply
- Visit analog.com/EVAL-CN0336-PMDZ

Fully Isolated, 3-Wire RTD Temperature Measurement System
- Galvanically isolated from processor
- Uses standard 3-wire RTD sensors
- Includes lead wire temperature compensation
- Visit analog.com/EVAL-CN0337-PMDZ

Precision Weigh Scale/Load Cell Design
- High gain, low noise
- 4- or 6-wire load cell compatible
- Full scale sensor output up to 10 mV
- Visit analog.com/EVAL-CN0216-PMDZ

Temperature Compensated Bridge Signal Conditioner and Driver Design
- Connect pressure sensor or load cells
- Drive voltage range 5 V to 15 V
- Full scale sensor output from 10 mV to 1 V
- Visit analog.com/EVAL-CN0335-PMDZ

Isolated pH Monitor Temperature Compensation
- ±0.5% accurate with temperature compensation
- Works with pH sensors 1 M to 1 G output impedance
- Uses standard connectors (BNC for pH and RCA for temperature)
- Visit analog.com/EVAL-CN0336-PMDZ

Electrochemical Toxic Gas Measurement System
- Measures a wide variety of gases
- Sensor sensitivity can be programmed
- Can use three or four electrode sensors
- Visit analog.com/EVAL-CN0337-PMDZ

Accurate Relative Humidity Measurement System
- Contactless humidity measurement
- Highly accurate
- Visit analog.com/EVAL-CN0346-PMDZ

Full scale sensor output from 10 mV to 1 V

Piezoelectric Vibration Measurement System
- Vibration measurements up to 500 kHz
- Use wide variety of charge crystal sensors
- Low power
- Visit analog.com/EVAL-CN0363-PMDZ

Multichannel Thermocouple Measurement System with Cold Junction Compensation
- Measure up to 4 channels
- Overall power consumption of <8 mW
- <2°C error from −25°C to +400°C
- Visit analog.com/EVAL-CN0365-PMDZ

Dual-Channel Colorimeter
- Red, green, blue LED absorption
- Vial holder and diffusor glass included
- Digital synchronization between channels
- Visit analog.com/EVAL-CN0350-PMDZ

Single Supply LED Current Driver
- Programmable output current
- Range from 0 mA to 20 mA
- Low power
- Visit analog.com/EVAL-CN0370-PMDZ

High Temperature 16-Bit Data Acquisition System
- Entire board can work up to 175°C
- Low power for battery applications
- 16-bit, 600 KSPS DAQ
- Visit analog.com/EVAL-CN0365-PMDZ

Ultra Low Power, Multichannel Data Acquisition with Energy Harvesting
- Low power (100 μA at 22 KSPS)
- Photovoltaic or thermoelectric energy
- 4-channel 16-bit DAQ
- Visit analog.com/EVAL-CN0372-PMDZ

Low Power 2.4 GHz ISM Band Radio
- Global ISM band
- High sensitivity
- Programmable output power
- Visit analog.com/EVAL-ADF7242-PMDZ
