Linear Technology Corporation
1630 McCarthy Boulevard
Milpitas, CA 95035-7417

Dear David Ng,

Enclosed is the EMC test report for compliance testing of the Linear Technology Corporation, LTM8031, tested to the requirements of EN 55022 (CISPR 22): 2006 for a Class B Device.

Thank you for using the services of MET Laboratories, Inc. If you have any questions regarding these results or if MET can be of further service to you, please feel free to contact me.

Sincerely yours,
MET LABORATORIES, INC.

Kanesa Pogi
Documentation Department

Engineering Statement: The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the applicable limits. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurements made, the equipment tested is capable of operation in accordance with the requirements of EN 55022 (CISPR 22): 2006 under normal use and maintenance.

1.0 Testing Summary

The following tests specified by EN 55022 were performed with the following results.

Specification	Test Description	Compliance
EN 55022 (CISPR 22): 2006	Radiated Emissions - Class B	Compliant

Table 1. Summary of EMC EN 55022 (CISPR 22): 2006 Compliance Testing

2.0 Equipment Configuration

2.1 Overview

MET Laboratories, Inc. was contracted by Linear Technology Corporation to perform testing on the LTM8031, under Linear Technology Corporation purchase order number 14297T.

This document describes the test setups, test methods, required test equipment, and the test limit criteria used to perform compliance testing of the Linear Technology Corporation, LTM8031 with the requirements of EN 55022 limits and Methods of Radio Disturbance characteristic of Information Technology Equipment.

The results obtained relate only to the item(s) tested.

Model(s) Tested:	LTM8031
Model(s) Covered:	LTM8031
EUT Specifications:	Primary Power: 3.6V to 36V
	Equipment Emissions Class: B
Evaluated by:	Minh Ly
Date(s):	July 2, 2009

2.2 Test Site

All testing was performed at MET Laboratories, Inc., 3162 Belick St. Santa Clara, CA 95054. All equipment used in making physical determinations is accurate and bears recent traceability to the National Institute of Standards and Technology.

2.3 Measurement Uncertainty

Test Method	Typical Expanded Uncertainty (dB)	K	Confidence Level
Radiated Emissions	±3.45	2	95%
Conducted Emission	±3.75	2	95%
CEV Telecom Port	±2.75	2	95%

Table 2: Uncertainty Calculations Summary

2.4 Description of Test Sample

The LTM8031, Equipment Under Test (EUT), is a 36Vin, 1A step down switching power converter. There will be three configurations: (a.) 10Vout (maximum output voltage) (b.) 5Vout (c.) 2.5Vout

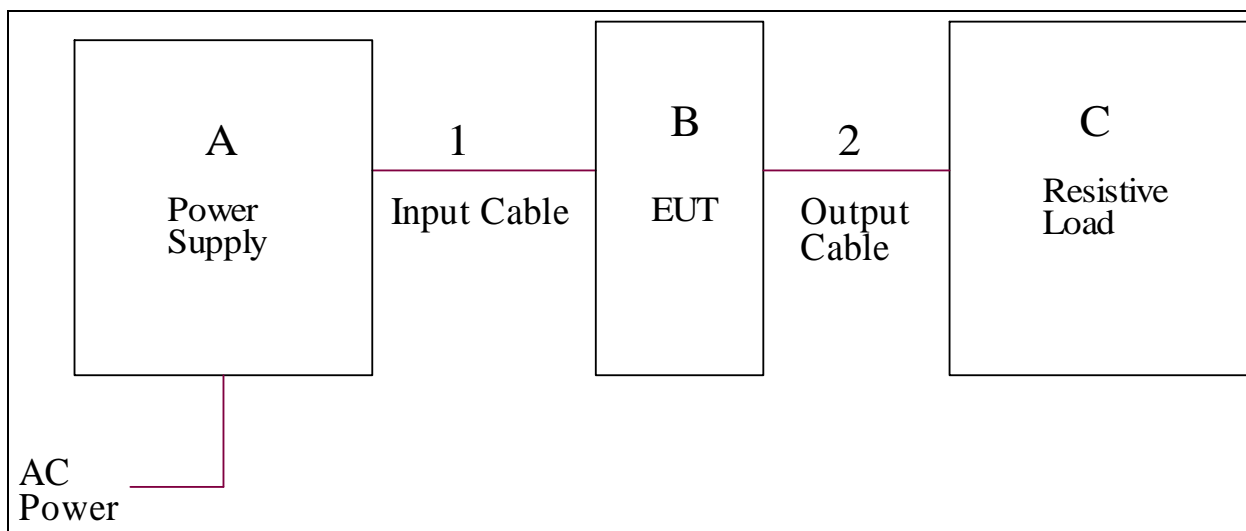

Figure 1. Block Diagram of Test Configuration

2.5 Equipment Configuration

The EUT was set up as outlined in Figure 1. All equipment incorporated as part of the EUT is included in the following list.

Ref. ID	Slot #	Name / Description	Model Number	Part Number	Serial Number
B	N/A	Ultralow Noise EMC Compliant 36V, 1A DC/DC μ Module	LTM8031	LTM8031EV	N/A

Table 3. Equipment Configuration

2.6 Support Equipment

Support equipment necessary for the operation and testing of the EUT is included in the following list.

Ref. ID	Name / Description	Manufacturer	Model Number	*Customer Supplied Calibration Data
A	Power Supply	Power Designs	TPS343B	Not required
C	Resistive Load	N/A	N/A	Not required

Table 4. Support Equipment

* All 'customer supplied' support equipment will include the equipments calibration data. This column will be marked as either not applicable, not available, or will contain the calibration date supplied by the customer.

2.7 Ports and Cabling Information

Ref. ID	Port name on EUT	Cable Description or reason for no cable	Qty	Length as tested (m)	Max Length (m)	Shielded (Y/N)	Termination Box ID & Port Name
1	Input	2 conductor, 18 AWG (3 conductor, 18 AWG for 2.5V _{out} Configuration)	1	2	N/A	No	V _{in}
2	Output	2 conductor, 18 AWG	1	0.05	N/A	No	V _{out}

Table 5. Ports and Cabling Information

2.8 Mode of Operation

The EUT will be continuously powered from 36Vin lab grade power supply. There will be three configurations:

1. 10Vout loaded to 1A
2. 5Vout loaded to 1A
3. 2.5Vout loaded to 1A

The 10Vout case is the maximum output power configuration

2.9 Method of Monitoring EUT Operation

- 1) The unit will be drawing between 2.5Watts and 12Watts from the power source, depending upon the configuration.
- 2) The unit will draw no or substantially more power than condition 1.

2.10 Configurations

In addition to the EUT, there will be an input power supply, input cable, output cable and output load. The input power supply is a Power Designs TPS343B power supply, configured to source 36V and at least 1A. The input cables are two wires, the output cables are two wires, and the load is a bank of power resistors configured to load the EUT to 1A.

2.11 Disposition of EUT

The test sample including all support equipment (if any), submitted to the Electro-Magnetic Compatibility Lab for testing was returned to Linear Technology Corporation upon completion of testing.

3.0 Electromagnetic Compatibility Emission Criteria

3.1 Radiated Emission: Limits of Electromagnetic Radiation Disturbance

Test Method: EN 55022 (CISPR 22): 2006
Limits and Methods of Measurement of Radio Disturbance Characteristics of Information Technology Equipment.

Test Requirement(s): EN 55022, Section 6, Limits for Radiated Disturbances:

For radiated emission in the frequency range 30 MHz - 1 000 MHz, the EUT shall meet the Class B radiated emission limits shown in Table 6.

Frequency Band (MHz)	Class A Quasi-Peak limits 10 m measurement distance (dB μ V/m)	Class B Quasi-Peak limits 10 m measurement distance (dB μ V/m)
30 to 230	40	30
230 to 1000	47	37

Table 6. Electromagnetic Radiated Disturbance limits from Clause 6 of EN 55022

Test Procedure: The EUT placed on a 0.8m-high wooden table located inside a semi-anechoic chamber. The method of testing, test conditions, and test procedures of EN 55022 were used. An antenna was located 3 m from the EUT on an adjustable mast. A pre-scan was first performed in order to find prominent radiated emissions. For final emissions measurements at each frequency of interest, the EUT was rotated and the antenna height was varied between 1 m and 4 m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. Unless otherwise specified, measurements were made using a quasi-peak detector with a 120 kHz bandwidth.

Emissions measured at 3m were normalized using an inverse proportionality factor of 20dB per decade for comparison to the 10 m limit. The physical size of the EUT was taken into account as to avoid near-field effects, which could occur near 30 MHz. See Photograph 1 for a picture of the test setup.

Environmental Conditions for Radiated Emission	
Ambient Temperature:	24 °C
Relative Humidity:	43 %

Test Results: The EUT was compliant with the requirement(s) of this section.

Test Engineer(s): Minh Ly

Test Date(s): 06/11/09
