Linear Technology Corporation
1630 McCarthy Blvd.
Milpitas, CA 95035

Dear David Ng,

Enclosed is the EMC test report for compliance testing of the Linear Technology Corporation, LTM8020 (200mA, 36V DC/DC μ Module), tested to the requirements of EN 55022: 2006 for a Class B Device.

Thank you for using the services of MET Laboratories, Inc. If you have any questions regarding these results or if MET can be of further service to you, please feel free to contact me.

Sincerely yours,
MET LABORATORIES, INC.

Kanesa Pogi
Documentation Department

Engineering Statement: The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the applicable limits. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurements made, the equipment tested is capable of operation in accordance with the requirements of EN 55022: 2006 under normal use and maintenance.

1.0 Testing Summary

The following tests specified by EN 55022 were performed with the following results.

Specification	Test Description	Compliance
EN 55022: 2006	Radiated Emissions - Class B	Compliant

Table 1. Executive Summary of EN 55022 Compliance Testing

2.0 Equipment Configuration

2.1 Overview

MET Laboratories, Inc. was contracted by Linear Technology Corporation to perform testing on the LTM8020 (200mA, 36V DC/DC μ Module), under Linear Technology Corporation purchase order number X14282T.

This document describes the test setups, test methods, required test equipment, and the test limit criteria used to perform compliance testing of the Linear Technology Corporation, LTM8020 (200mA, 36V DC/DC μ Module) with the requirements of EN 55022 limits and Methods of Radio Disturbance characteristic of Information Technology Equipment.

The results obtained relate only to the item(s) tested.

Model(s) Tested:	LTM8020 (200mA, 36V DC/DC μ Module)
Model(s) Covered:	LTM8020
EUT Specifications:	Primary Power: 34 to 36V
	Equipment Emissions Class: B
Evaluated by:	Randy Hoopai
Date(s):	August 07, 2009

2.2 Test Site

All testing was performed at MET Laboratories, Inc., 3162 Belick St. Santa Clara, CA 95054. All equipment used in making physical determinations is accurate and bears recent traceability to the National Institute of Standards and Technology.

2.3 Description of Test Sample

The LTM8020, Equipment Under Test (EUT) is a 36Vin, 200mA step down switching power converter. It was mounted to the DC1194A demonstration board.

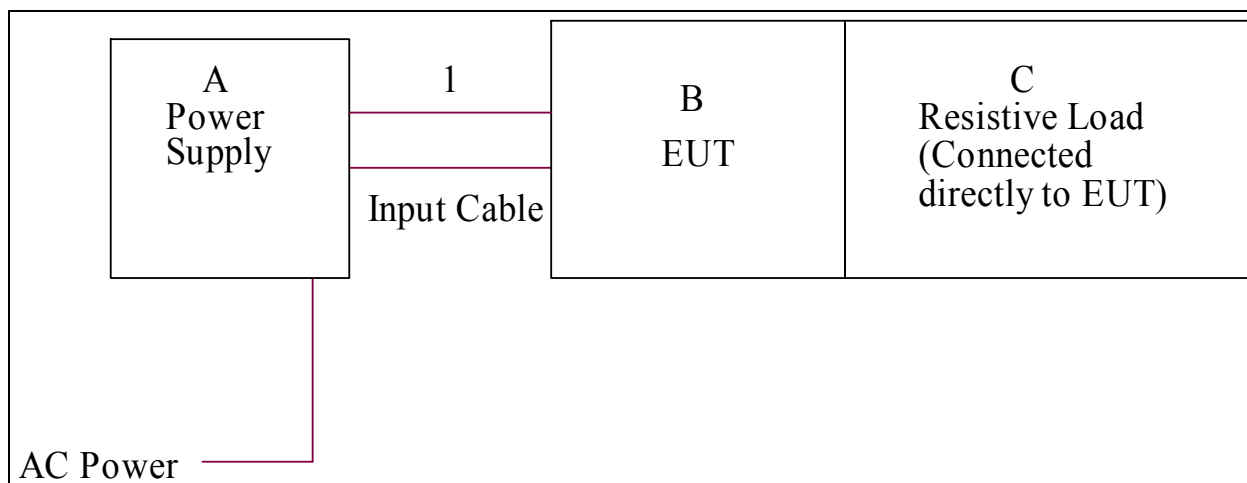

Figure 1. Block Diagram of Test Configuration

2.4 Equipment Configuration

The EUT was set up as outlined in Figure 1. All equipment incorporated as part of the EUT is included in the following list.

Ref. ID	Slot #	Name / Description	Model Number	Part Number	Serial Number	Rev. #
B	N/A	200mA, 36V DC/DC μ Module	LTM8020	LTM8020EV	001	--

Table 2. Equipment Configuration

2.5 Support Equipment

Support equipment necessary for the operation and testing of the EUT is included in the following list.

Ref. ID	Name / Description	Manufacturer	Model Number	Customer Supplied Calibration Data
A	Power Supply	Power Designs	TPS343B	--
C	Resistive Load	N/A	N/A	--

Table 3. Support Equipment

2.6 Ports and Cabling Information

Ref. ID	Port name on EUT	Cable Description or reason for no cable	Qty	Length as tested (m)	Max Length (m)	Shielded (Y/N)	Termination Box ID & Port Name
1	Input	2 conductor, 18 AWG (3 conductor for 1.25Vout configuration)	1	2	--	No	Vin

Table 4. Ports and Cabling Information

2.7 Mode of Operation

The EUT will be continuously power from 36Vin lab grade power supply. There will be three configurations tested:

1. 1.25Vout loaded to 200mA. An additional 5V bias is required when running this low of an output voltage.
2. 2.5Vout loaded to 200mA
3. 5Vout loaded to 200mA – this is maximum output power configuration

2.8 Method of Monitoring EUT Operation

1. The output voltage will be in regulation.
2. The output voltage will be significantly above or below its regulation point.

2.9 Modifications to the EUT

No modifications were made to the EUT.

2.10 Disposition of EUT

The test sample including all support equipment (if any), submitted to the Electro-Magnetic Compatibility Lab for testing was returned to Linear Technology Corporation upon completion of testing.

3.0 Electromagnetic Compatibility Emission Criteria

3.1 Radiated Emission: Limits of Electromagnetic Radiation Disturbance

Test Method: EN 55022:1994 + A1:1995 + A2:1997
Limits and Methods of Measurement of Radio Disturbance Characteristics of Information Technology Equipment.

Test Requirement(s): EN 55022, Section 6, Limits for Radiated Disturbances:

For radiated emission in the frequency range 30 MHz - 1 000 MHz, the EUT shall meet the Class B radiated emission limits shown in Table 5.

Frequency Band (MHz)	Class A Quasi-Peak limits 10 m measurement distance (dB μ V/m)	Class B Quasi-Peak limits 10 m measurement distance (dB μ V/m)
30 to 230	40	30
230 to 1000	47	37

Table 5. Electromagnetic Radiated Disturbance limits from Clause 6 of EN 55022

Test Procedure: The EUT was placed on a non-metallic table, 80 cm above the ground plane inside a semi-anechoic chamber. The method of testing, test conditions, and test procedures of EN 55022 were used. An antenna was located 3 m from the EUT on an adjustable mast. A pre-scan was first performed in order to find prominent radiated emissions. For final emissions measurements at each frequency of interest, the EUT was rotated and the antenna height was varied between 1 m and 4 m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. Unless otherwise specified, measurements were made using a quasi-peak detector with a 120 kHz bandwidth.

Emissions measured at 3m were normalized using an inverse proportionality factor of 20dB per decade for comparison to the 10 m limit. The physical size of the EUT was taken into account as to avoid near-field effects, which could occur near 30 MHz. See Photograph 1 for a picture of the test setup.

Environmental Conditions for Radiated Emission	
Ambient Temperature:	22 °C
Relative Humidity:	48 %

Linear Technology Corporation
LTM8020 (200mA, 36V DC/DC μ Module)

Test Results: The EUT was compliant with the requirement(s) of this section.

Test Engineer(s): Randy Hoopai

Test Date(s): 07/16/09
