## Radiation Test Results

**RH119MW  
Dual Comparator  
Linear Technology Corporation  
D/C 0637A, Lot 401782.2  
Test Date 04-26-07  
Log# 1571 and 1572, TID Test  
P.O.# 46027L**

This test consisted of two test logs, Logs 1571 and 1572. The test was to compare the radiation effects differences between the two bias conditions: Log 1571,  $\pm 15$  volts and Log 1572, which had all leads grounded. The twenty test parameters requirements are stated in test procedure RTP 686, dated March 21, 2007. There was one *Information Only* parameter tested.

The biased lot **FAILED** two of the parameter test requirements as stated in the Radiation Test Procedure RTP 686, dated March 21, 2007. The unbiased (grounded) lot **PASSED** all of the test requirements.

There were four parameters that indicated greater degradation when biased at  $\pm 15$  volts during irradiation. They are the Offset Current 1 & 2 and the Positive Bias Current 1 & 2. For the other parameters tested there was less than a 10% difference noted between the two bias conditions. The test results from the two bias conditions were within the LTC data sheet limits of the 50krad(Si) test level, except for the Offset Current 1 & 2 when biased at  $\pm 15$  volts during irradiation.

<u>Parameter</u>	<u>Log 1571 Biased</u>	<u>Log 1572 Grounded</u>	<u>Spec @ 50krad(Si)</u>

ELDRS Test - P.O.# 46026L**

This test consisted of two test logs, Logs 1573 and 1662. The test was to compare ELDRS radiation effects differences between the two bias conditions: Log 1573,  $\pm 15$  volts and Log 1662, which had all leads grounded. The twenty test parameters requirements are stated in test procedure RTP 686 dated March 21, 2007. There was one *Information Only* parameter tested.

The test results indicate there is little difference between the two bias conditions, The test results were less than the LTC data sheet limits of 20krad(Si) at the 50krad(Si) test level.

Both the biased and unbiased (grounded) lots **PASSED** all of the parameter test requirements as stated in the Radiation Test Procedure RTP 692, dated March 23, 2007.

ELDRS Test - P.O.# 46026L**

This test consisted of two test logs, Logs 1573 and 1662. The test was to compare ELDRS radiation effects differences between the two bias conditions: Log 1573,  $\pm 15$  volts and Log 1662, which had all leads grounded. The twenty test parameters requirements are stated in test procedure RTP 686 dated March 21, 2007. There was one *Information Only* parameter tested.

The test results indicate there is little difference between the two bias conditions, The test results were less than the LTC data sheet limits of 20krad(Si) at the 50krad(Si) test level.

Both the biased and unbiased (grounded) lots **PASSED** all of the parameter test requirements as stated in the Radiation Test Procedure RTP 692, dated March 23, 2007.
