Quad-Channel, 16-Bit CCD Signal Processor with *Precision Timing* Core

## FEATURES

4 independent AFE channels  
1.8 V analog and digital core supply voltage  
Complete on-chip ISATG timing generator with 16 XV outputs and 4 general-purpose outputs (GPO)  
Differential analog inputs  
CDS or SHA (CDS bypass) with 7 gain settings  
0 dB to 36 dB, 10-bit variable gain amplifier (VGA)  
16-bit, 65 MSPS analog-to-digital converter (ADC)  
*Precision Timing* core with 240 ps resolution at 65 MHz  
8 programmable H-clock outputs  
On-chip sync generator with external sync input  
8 mm × 8 mm CSP_BGA package with 0.65 pitch

## APPLICATIONS

Industrial cameras  
Surveillance cameras  
Medical imaging  
Professional photography

## GENERAL DESCRIPTION

The ADDI7015 is a highly integrated, quad-channel, CCD signal processor for high speed digital imaging applications. Each channel is specified at pixel rates of up to 65 MHz and consists of a complete analog front end (AFE) with analog-to-digital conversion. The *Precision Timing* core allows adjustment of the correlated double sampler (CDS) and sample-and-hold amplifier (SHA) clocks with 240 ps resolution at 65 MHz operation. There are eight independent horizontal clock outputs to support a variety of CCD timing requirements. The ADDI7015 also features a programmable ISATG for vertical timing generation.

Each analog front end includes black level clamping, a CDS, a VGA, and a 65 MSPS, 16-bit analog-to-digital converter (ADC). Operation is programmed using a 4-wire serial interface.

Packaged in a space-saving, 8 mm × 8 mm, CSP_BGA, the ADDI7015 is specified over an operating temperature range of −25°C to +85°C.

## FUNCTIONAL BLOCK DIAGRAM
