

## FEATURES

**Low noise figure: 1.5 dB typical**  
**Single positive supply (self biased)**  
**High gain:  $\leq 15$  dB typical**  
**High OIP3: 32 dBm typical**  
 **$V_{DD}$ : 5 V at  $I_{DQ} = 60$  mA**  
**50  $\Omega$  matched input and output**  
**Die size: 0.945 mm  $\times$  1.545 mm  $\times$  0.102 mm**

## APPLICATIONS

**Test instrumentation**  
**Military and space**  
**Telecommunications infrastructure**  
**Software defined radios**  
**Electronic warfare**  
**Radar applications**

## GENERAL DESCRIPTION

The HMC8412CHIPS is a gallium arsenide (GaAs), monolithic microwave integrated circuit (MMIC), pseudomorphic high electron mobility transistor (pHEMT), low noise amplifier that operates from 0.4 GHz to 10 GHz. The HMC8412CHIPS provides  $\leq 15$  dB of typical gain,  $\leq 19$  dBm typical output power at 1 dB gain compression (OP1dB), and a typical output third-order intercept (OIP3) of 32 dBm.

## FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The HMC8412CHIPS requires 60 mA from a 5 V supply on  $V_{DD}$ . The HMC8412CHIPS also features inputs and outputs (I/Os) that are internally matched to 50  $\Omega$  and facilitates integration into multichip modules (MCMs). In addition, the bias choke to the HMC8412CHIPS and the dc blocking capacitors on the  $RF_{IN}$  and  $RF_{OUT}$  pads are integrated, creating a small form factor solution.

## SPECIFICATIONS

### 0.4 GHz TO 8 GHz FREQUENCY RANGE

$V_{DD} = 5\text{ V}$ , supply current ( $I_{DQ}$ ) = 60 mA, and  $T_A = 25^\circ\text{C}$ , unless otherwise noted.

Table 1.

Parameter	Min	Typ	Max	Unit	Test Conditions/Comments
FREQUENCY RANGE	0.4		8	GHz	
GAIN (S21)	13	15		dB	
Gain Variation over Temperature		0.01		dB/°C	
NOISE FIGURE		1.5		dB	
RETURN LOSS					
Input (S11)		17		dB	
Output (S22)		14		dB	
OUTPUT					
OP1dB	17	19		dBm	
Saturated Output Power ( $P_{SAT}$ )		20		dBm	
OIP3		32		dBm	Measurement taken at output power ( $P_{OUT}$ ) per tone = 0 dBm
Output Second-Order Intercept (OIP2)		38		dBm	Measurement taken at $P_{OUT}$ per tone = 0 dBm
POWER ADDED EFFICIENCY (PAE)		29		%	Measured at $P_{SAT}$
SUPPLY					
$I_{DQ}$		60		mA	
$V_{DD}$	3	5	6	V	

### 8 GHz TO 10 GHz FREQUENCY RANGE

$V_{DD} = 5\text{ V}$ ,  $I_{DQ} = 60\text{ mA}$ , and  $T_A = 25^\circ\text{C}$ , unless otherwise noted.

Table 2.

Parameter	Min	Typ	Max	Unit	Test Conditions/Comments
FREQUENCY RANGE	8		10	GHz	
GAIN (S21)	13	14.5		dB	
Gain Variation over Temperature		0.018		dB/°C	
NOISE FIGURE		1.7		dB

$V_{DD}$	3	5	6	V	

## ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Rating
V <sub>DD</sub>	7 V
RF Input Power	25 dBm
Continuous Power Dissipation (P <sub>DISS</sub> ), T <sub>A</sub> = 85°C (Derate 12.2 mW/°C Above 85°C)	1.1 W
Temperature	
Channel	175°C
Storage Range	-65°C to +150°C
Operating Range	-55°C to +85°C
Junction Temperature to Maintain 1,000,000 Hour Mean Time to Failure (MTTF)	175°C
Nominal Junction Temperature (T <sub>A</sub> = 85°C, V <sub>DD</sub> = 5 V, I <sub>DQ</sub> = 60 mA)	113.4°C

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

### THERMAL RESISTANCE

Thermal performance is directly linked to system design and operating environment. Careful attention to the printed circuit board (PCB) thermal design is required.

$\theta_{JC}$  is the junction-to-case thermal resistance, channel to bottom of die using die attach epoxy.

Table 4. Thermal Resistance

Package Type	$\theta_{JC}$	Unit
C-4-5	94.6	°C/W

## ELECTROSTATIC DISCHARGE (ESD) RATINGS

The following ESD information is provided for handling of ESD-sensitive devices in an ESD protected area only.

Human body model (HBM) per ANSI/ESDA/JEDDEC JS-001.

### ESD Ratings for HMC8412CHIPS

Table 5. HMC8412CHIPS, 4-Pad Die

ESD Model	Withstand Threshold (V)	Class
HBM	±500	1B

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 2. Pad Configuration

Table 6. Pad Function Descriptions

Pad No.	Mnemonic	Description
1	RF <sub>IN</sub> GND	RF Input. The RF <sub>IN</sub> pad is ac-coupled and matched to 50 Ω. See Figure 4 for the interface schematic. Ground. The GND pads must be connected to the RF and dc ground. See Figure 6 for the interface schematic.
2	R <sub>BIAS</sub>	Bias Resistor. See Figure 3 for the interface schematic.
3	V <sub>DD</sub>	Drain Bias Voltage for the Amplifier. See Figure 5 for the interface schematic.
4	RF <sub>OUT</sub>	RF Output. The RF <sub>OUT</sub> pad is ac-coupled and matched to 50 Ω. See Figure 5 for the interface schematic.

**THEORY OF OPERATION**

The HMC8412CHIPS is a GaAs, MMIC, pHEMT, low noise wideband amplifier with integrated ac-coupling capacitors and a bias inductor. A simplified block diagram is shown in Figure 73.

The HMC8412CHIPS has ac-coupled, single-ended input and output ports with impedances that are nominally equal to 50 Ω over the 0.4 GHz to 10 GHz frequency range. No external matching components are required. To adjust the drain bias current, connect an external resistor between the R<sub>BIAS</sub> and V<sub>DD</sub> pads.

Figure 73. Simplified Block Diagram

24012-074

## APPLICATIONS INFORMATION

The basic connections for operating the HMC8412CHIPS over the specified frequency range are shown in Figure 74. No external biasing inductor is required, allowing the 5 V supply to be connected to the V<sub>DD</sub> pad. The 4.7 μF, 0.01 μF, and 100 pF power supply decoupling capacitors are recommended. The power supply decoupling capacitors shown in Figure 74 represent the configuration used to characterize and qualify the HMC8412CHIPS. It is possible to reduce the number of capacitors, but this reduction varies from system to system. It is recommended to first remove the largest capacitors that are farthest from the device when reducing the number of capacitors.

To set I<sub>DQ</sub>, connect a resistor, R1, between the R<sub>BIAS</sub> and V<sub>DD</sub> pads (see Figure 74). A default value of 1.43 kΩ is recommended, which results in a nominal I<sub>DQ</sub> of 60 mA. Table 7 shows how the I<sub>DQ</sub> varies vs. the bias resistor value. The R<sub>BIAS</sub> pad also draws a current that varies with the value of R<sub>BIAS</sub> (see Table 7). Do not leave the R<sub>BIAS</sub> pad open.

### TYPICAL APPLICATION CIRCUIT

Figure 74 shows the typical application circuit of the HMC8412CHIPS.

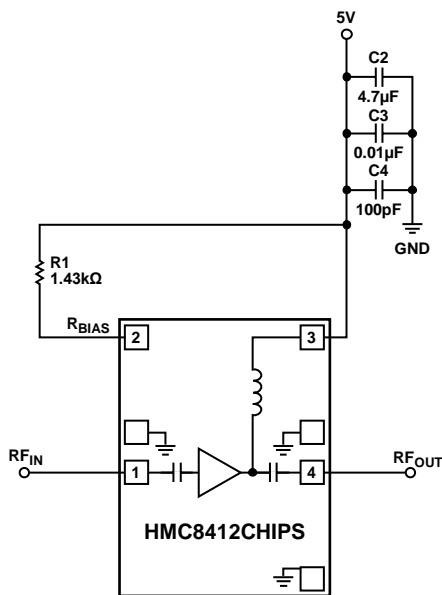

Figure 74. Typical Application Circuit

24012-075

## RECOMMENDED BIAS SEQUENCING

### During Power-Up

To power up, follow this bias sequence:

1. Set V<sub>DD</sub> to 5 V.
2. Apply the RF signal.

### During Power-Down

To power down, follow this bias sequence:

1. Turn off the RF signal.
2. Set V<sub>DD</sub> to 0 V.

Table 7. Recommended Bias Resistor Values

R <sub>BIAS</sub> (Ω)	Total Current (mA)	I <sub>DQ</sub> (mA)	R <sub>BIAS</sub> Current (mA)
604	82.83	80	2.93
802	75.98	75	2.68
1000	70.96	70	2.36
1210	66.95	65	2.05
1430	62.08	60	1.98
1800	57.13	55	1.73
2500	51.68	50	1.48
3010	43.74	45	1.24
3500	41.15	40	1.05
4990	35.35	35	0.85
6650	30.55	30	0.65
8450	27.37	25	0.47
18000	20.35	20	0.25

## ASSEMBLY DIAGRAM

Figure 75 shows the assembly diagram of the HMC8412CHIPS.

Figure 75. Assembly Diagram

24012-076

## MOUNTING AND BONDING TECHNIQUES FOR MILLIMETER WAVE GaAs MMICs

Attach the die directly to the ground plane with conductive epoxy (see the Handling Precautions section).

To bring RF to and from the HMC8412CHIPS, implement 50 Ω transmission lines using a microstrip or coplanar waveguide on 0.127 mm (5 mil) thick alumina, thin film substrates (see Figure 76). When using 0.254 mm (10 mil) thick alumina, raise the die to ensure that the die and substrate surfaces are coplanar. Raise the die 0.150 mm (6 mil) to ensure that the surface of the die is coplanar with the surface of the substrate. To make the die coplanar with the surface of the substrate, attach the 0.102 mm (4 mil) thick die to a 0.150 mm (6 mil) thick, molybdenum (Mo) heat spreader (moly tab), which then attaches to the ground plane (see Figure 76 and Figure 77).

Place microstrip substrates as close to the die as possible to minimize bond wire length. Typical die to substrate spacing is 0.076 mm to 0.152 mm (3 mil to 6 mil).

Figure 76. High Frequency Input Matching

Figure 77. High Frequency Output Matching

## HANDLING PRECAUTIONS

To avoid permanent damage to the die, follow these storage, cleanliness, static sensitivity, transient, and general handling precautions:

- Place all bare die in either waffle-based or gel-based ESD protective containers, and then seal the die in an ESD protective bag for shipment. After the sealed ESD protective bag is opened, store all die in a dry nitrogen environment.
- Handle the chip in a clean environment. Do not attempt to clean the chip using liquid cleaning systems.
- Follow ESD precautions to protect against ESD strikes.
- While applying bias, suppress instrument and bias supply transients. Use shielded signal and bias cables to minimize inductive pickup.
- Handle the chip along the edges with a vacuum collet or with a sharp pair of tweezers.

OUTLINE DIMENSIONS

Figure 78. 4-Pad Bare Die [CHIP]  
(C-4-5)  
Dimensions shown in millimeters

ORDERING GUIDE

Model <sup>1</sup>	Temperature Range	Package Description	Package Option
HMC8412CHIPS	-55°C to +85°C	4-Pad Bare Die [CHIP]	C-4-5
HMC8412CHIPS-SX	-55°C to +85°C	4-Pad Bare Die [CHIP]	C-4-5

<sup>1</sup> The HMC8412CHIPS and HMC8412CHIPS-SX are RoHS compliant parts.
