

MAX32670 Evaluation Kit

Evaluates: MAX32670

General Description

The MAX32670 evaluation kit (EV kit) provides a platform for evaluation capabilities of the MAX32670. The MAX32670 is an ultra-low-power, cost-effective, highly reliable 32-bit microcontroller that enables designs with complex sensor processing without compromising battery life. It combines a flexible and versatile power management unit with the powerful Arm® Cortex®-M4 core with floating point unit (FPU). The MAX32670 also offers legacy designs an easy and cost optimal upgrade path from 8-bit or 16-bit microcontrollers.

EV Kit Contents

- MAX32670 EV kit containing a MAX32670
- One standard A to Micro B USB cable

Ordering Information

PART	TYPE
MAX32670EVKIT#	EV Kit

#Denotes RoHS compliance.

Features

- USB 2.0 Micro B to Serial UART Bridge
- UART0 and UART3 Interface is Selectable Through On-Board Jumpers
- On-Board MAX32625PICO-Based Debugger
- Boot Load Enable Circuitry
- SPI and I²C Signals Accessed Through 0.1in Headers
- GPIOs and Miscellaneous Signals Accessed Through 0.1in Headers
- Board Power Provided by USB Port
- On-Board SIMO Regulator and LDO for IC and Peripherals
- Individual Power Measurement on all IC Rails Through Jumpers
- Two General-Purpose LED and One General-Purpose Pushbutton Switch

MAX32670 EV Kit Board

Arm and Cortex are registered trademarks of Arm Limited (or its subsidiaries) in the US and/or elsewhere.

Quick Start

Required Equipment

- MAX32670 EV kit
- One standard A to Micro B USB cable

Procedure

The EV kit is fully assembled and tested. Use the following steps to verify board operation:

- 1) While observing safe ESD practices, carefully remove the MAX32670 EV kit board out of its packaging. Inspect the board to ensure that no damage occurred during shipment. Jumpers/shunts are preinstalled prior to testing and packaging.
- 2) Power up the board by plugging in the provided USB cable to connector CN1. Verify that the blue LED (D4) illuminates and that the green LED (D2) flashes indicating successful completion of board diagnostics.

Detailed Description of Hardware (or Software)

Power Supply

The EV kit is powered by +5V that is made available through V_{BUS} on the Micro-USB type-B connector CN1.

Current Monitoring

Two pin headers provide convenient current monitoring points for V_{DD} (JP5) and V_{CORE} (JP6).

Low-Power Mode Current Measurements

When attempting to measure the current consumption for any of the low-power modes, remove jumpers JP3 and JP4.

Clocking

The MAX32670 clocking is provided by an external 32MHz crystal (Y1) and an external 32.768kHz crystal (Y2) for RTC operations.

Programming and Debugging

The MAX32670 EV kit integrates a MAX32625PICO-based debugger for DAPLink functionality.

UART Interface

A USB-to-UART bridge, implemented in the MAX32625, eliminates the requirement for a physical RS-232 COM port. The bridge can be connected to UART0 or LPUART0 of the IC with jumpers JP3 (Rx) and JP4 (Tx).

Host Interface Headers

The EV kit can communicate by SPI, I²C or UART to the Host processor through 0.1in spaced headers JH2 (SPI), JH3 (I²C) and connector CN1 (UART). The interface type is set by ISEL0 jumper JP7 and ISEL1 jumper JP8.

GPIO and Alternate Function Headers

GPIO and alternate function signals from the MAX32670 can be accessed through 0.1in spaced headers JH1 and JH2.

SPI0 Header

SPI0 signals from the MAX32670 can be accessed through 0.1in spaced header JH3.

Reset Pushbutton

The IC can be reset by pushbutton SW2.

Boot Loader

Boot load is activated by boot load enable slide switch SW1.

Indicator LEDs

General-purpose indicators LED D1 (red) is connected to GPIO P0.22 and LED D2 (green) is connected to GPIO P0.23

GPIO Pushbutton Switch

General-purpose pushbutton SW3 is connected to GPIO21. If the pushbutton is pressed, the attached port pin is pulled low.

Table 1. MAX32670 EV Kit Jumper Settings

JUMPER	SIGNAL	SETTINGS	DESCRIPTION
JP1	P0_22	Open	Disconnects red LED from P0_22
		*Close	Connects red to P0_22
JP2	P0_23	Open	Disconnects green LED from P0_23
		*Close	Connects green LED to P0_23
JP3	P0_20	*2-1	Connects the USB to serial port P0_8 (UART0_RX)
	P0_26	2-3	Connects the USB to serial port P0_26 (LPUART0_RX)
JP4	P0_9	*2-1	Connects the USB to serial port P0_9 (UART0_TX)
	P0_27	2-3	Connects the USB to serial port P0_27 (LPUART0_TX)
JP5	VDD	Open	Disconnects power to VDD
		*Close	Connects power to VDD
JP6	VCORE	Open	Disconnects power to VCORE
		*Close	Connects power to VCORE
JP7	SIMO RSEL2	1-2	Sets output 2 of the SIMO regulator to 0.9V
		*3-4	Sets output 2 of the SIMO regulator to 1.0V
		5-6	Sets output 2 of the SIMO regulator to 1.1V

*Default setting.
