Evaluating the **ADM7150** and **ADM7151** Linear Regulators

### REGULATOR FEATURES
- **Input voltage range:** 4.5 V to 16 V
- **Maximum output current:** 800 mA
- **Low noise**
  - 1.2 µV_RMS_ total integrated noise from 100 Hz to 100 kHz
  - 2 µV_RMS_ from 10 Hz to 100 kHz
- **Initial accuracy:** ±1%
- **Fixed 5 V (ADM7150) and adjustable (ADM7151) output versions**
- **8-lead LFCSP package and SOIC package**

### EVALUATION KIT CONTENTS
- ADM7150CP-EVALZ or ADM7151CP-02-EVALZ evaluation board

### ADDITIONAL EQUIPMENT NEEDED
- DC power supply
- Multimeters for voltage and current measurements
- Electronic or resistive loads

### GENERAL DESCRIPTION
The ADM7150CP-EVALZ and ADM7151CP-02-EVALZ evaluation boards are used to demonstrate the functionality of the ADM7150 and ADM7151 linear regulators, respectively.

Simple device measurements, such as line and load regulation, dropout, and ground current, can be demonstrated with just a single voltage source, a voltmeter, an ammeter, and load resistors.

For more details about the linear regulators, refer to the ADM7150 and ADM7151 data sheets.

EVALUATION BOARD HARDWARE

EVALUATION BOARD CONFIGURATIONS

The evaluation boards arrive supplied with different components depending on which version is ordered. Components common to both versions are C1, C2, R3, J1, and J2.

Resistors R1 and R2 are used for the ADM7151 adjustable output option. The output voltage is set by

\[ V_{\text{OUT}} = 1.5 \, V \times (1 + \frac{R1}{R2}) \]

OUTPUT VOLTAGE MEASUREMENTS

Figure 2 shows how the evaluation board can be connected to a voltage source and a voltmeter for basic output voltage accuracy measurements. A resistor can be used as the load for the regulator.

Ensure that the resistor has a power rating adequate to handle the power expected to be dissipated across it. An electronic load can also be used as an alternative. Ensure that the voltage source can supply enough current for the expected load levels.

Use the following steps to connect to a voltage source and voltmeter:

1. Connect the negative terminal (−) of the voltage source to one of the GND pads on the evaluation board.
2. Connect the positive terminal (+) of the voltage source to the VIN pad of the evaluation board.
3. Connect a load between the VOUT pad and one of the GND pads.
4. Connect the negative terminal (−) of the voltmeter to one of the GND pads.
5. Connect the positive terminal (+) of the voltmeter to the VOUT pad.

The voltage source can now be turned on. If JP1 is inserted (connecting EN to VIN for automatic startup), the regulator powers up.

If the load current is large, the user needs to connect the voltmeter as close as possible to the output capacitor to reduce the effects of IR drops.

LINE REGULATION

For line regulation measurements, the regulator’s output is monitored while its input is varied. For good line regulation, the output must change as little as possible with varying input levels. To ensure that the device is not in dropout during this measurement, \( V_{\text{IN}} \) must be varied between \( V_{\text{OUTNOM}} + 1.5 \text{V} \) (or 4.5 V, whichever is greater) and \( V_{\text{INMAX}} \). For example, for an ADM7150 with fixed 5 V output, \( V_{\text{IN}} \) needs to be varied between 6.5 V and 16 V. This measurement can be repeated under different load conditions. Figure 3 shows the typical line regulation performance of an ADM7150 with fixed 5 V output.

![Figure 3. Output Voltage vs. Input Voltage](image-url)
LOAD REGULATION

For load regulation measurements, the regulator’s output is monitored while the load is varied. For good load regulation, the output must change as little as possible with varying loads. The input voltage must be held constant during this measurement. The load current can be varied from 0 mA to 800 mA. Figure 4 shows the typical load regulation performance of an ADM7150 with fixed 5 V output for an input voltage of 6.5 V.

![Figure 4. Output Voltage vs. Load Current](image1)

DROP OUT VOLTAGE

Dropout voltage can be measured using the configuration shown in Figure 2. Dropout voltage is defined as the input-to-output voltage differential when the input voltage is set to the nominal output voltage. This applies only for output voltages greater than 4.5 V. Dropout voltage increases with larger loads. For more accurate measurements, a second voltmeter can be used to monitor the input voltage across the input capacitor. The input supply voltage may need to be adjusted to account for IR drops, especially if large load currents are used. Figure 5 shows a typical curve of dropout voltage measurements with different load currents.

![Figure 5. Dropout Voltage vs. Load Current](image2)
GROUND CURRENT MEASUREMENTS

Figure 6 shows how the evaluation board can be connected to a voltage source and an ammeter for ground current measurements. A resistor can be used as the load for the regulator. Ensure that the resistor has a power rating adequate to handle the power expected to be dissipated across it. An electronic load can be used as an alternative. Ensure that the voltage source used can supply enough current for the expected load levels.

Use the following steps to connect to a voltage source and ammeter:

1. Connect the positive terminal (+) of the voltage source to the VIN pad on the evaluation board.
2. Connect the positive terminal (+) of the ammeter to one of the GND pads of the evaluation board.
3. Connect the negative terminal (−) of the ammeter to the negative (−) terminal of the voltage source.
4. Connect a load between the negative (−) terminal of the voltage source and the VOUT pad of the evaluation board.

The voltage source can now be turned on. If JP1 is inserted (connecting EN to VIN for automatic startup), the regulator powers up.

GROUND CURRENT CONSUMPTION

Ground current measurements can determine how much current the regulator’s internal circuits are consuming while the circuits perform the regulation function. To be efficient, the regulator needs to consume as little current as possible. Typically, the regulator uses the maximum current when supplying its largest load level (800 mA). Figure 7 shows the typical ground current consumption for various load levels at an input voltage of 6.5 V for an output voltage of 5 V.

When the device is disabled (EN = GND), the ground current drops to less than 1 µA.

### Legal Terms and Conditions

- **ESD Caution:** ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

- **Limited Warranty:** ADI warrants to the original end user that the Evaluation Board is free from defects in materials and workmanship for a period of __ days from the date of shipment. ADI disclaims any other warranties, express or implied, including any implied warranties of merchantability or fitness for a particular purpose. ADI does not warrant the Evaluation Board in any manner to conform to any specifications, drawings, reverse engineering, intellectual property, or to be suitable for any purpose. ADI does not warrant the Evaluation Board for export, including export to locations subject to United States or other countries' federal laws and regulations relating to exports.

- **Limitation of Liability:** ADI shall not be liable for any direct, indirect, special, incidental, or consequential damages, including lost profits, arising from the furnishing or use of the Evaluation Board, regardless of the cause or form of action, including contract, tort, or negligence. ADI's total liability for any and all causes shall be limited to __.

- **Warranties:** ADI warrants that the Evaluation Board is free from defects in materials and workmanship for a period of __ days from the date of shipment. ADI disclaims any other warranties, express or implied, including any implied warranties of merchantability or fitness for a particular purpose. ADI does not warrant the Evaluation Board in any manner to conform to any specifications, drawings, reverse engineering, intellectual property, or to be suitable for any purpose. ADI does not warrant the Evaluation Board for export, including export to locations subject to United States or other countries' federal laws and regulations relating to exports.

- **Legal Terms and Conditions:** By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the “Evaluation Board”), you are agreeing to be bound by the terms and conditions set forth below (“Agreement”) unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and(ii) permit any third party to access the Evaluation Board. As used herein, the term “Third Party” includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board IS NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. Customer shall not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED “AS IS” AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, WARRANTIES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY; TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER’S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOSS PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI’S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS ($100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports.

- **GOVERNING LAW:** This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
