

Evaluating the ADRF5051 Silicon SP4T Switch, Nonreflective, 9kHz to 20GHz

FEATURES

- ▶ Full feature availability for the [ADRF5051](#)
- ▶ Easy connection to test equipment
- ▶ Additional through line for calibration
- ▶ Dual- and single-supply operation support

EQUIPMENT NEEDED

- ▶ DC power supplies
- ▶ Network analyzer

GENERAL DESCRIPTION

This user guide describes the ADRF5051-EVALZ evaluation board, which is designed to simply evaluate the features and performance of the ADRF5051. A photograph of the evaluation board is shown in [Figure 1](#). Note that ADRF5051-EVALZ is shared with [ADRF5050](#).

The ADRF5051 is a silicon SP4T switch, nonreflective, manufactured in the silicon on insulator (SOI) process. Refer to the ADRF5051 data sheet with this user guide when using the ADRF5051-EVALZ.

REVISION HISTORY

3/2025—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

OVERVIEW

The ADRF5051-EVALZ is a connectorized board, assembled with the [ADRF5051](#) and its application circuitry. All components are placed on the primary side of ADRF5051-EVALZ. The evaluation board schematic is shown in [Figure 10](#), and the assembly drawing for the ADRF5051-EVALZ is shown in [Figure 11](#).

BOARD LAYOUT

The PCB stack-up for the ADRF5051-EVALZ is shown in [Figure 2](#).

Figure 2. Evaluation Board Stack-Up

The PCB stack-up has four layers. The outer copper layers are 1oz (1.5mil) thick and the inner layers are 0.5oz (0.7mil) thick.

The top dielectric material is 8mil Rogers 4003, which provides 50Ω-controlled impedance and optimizes the high frequency performance. All RF traces are routed on the top layer, and the second layer is used as the ground plane for the RF transmission lines. The RF transmission lines are designed using a coplanar waveguide (CPWG) model with a width of 14mil and ground spacing of 7mil to have a characteristic impedance of 50Ω. Ground via fences are arranged on both sides of the CPWG to improve isolation between nearby RF lines and other signal lines.

The bottom two layers are also ground planes filled with FR4 material to manage the thermal rise during high power operations and are supported with dense and filled vias to the PCB bottom for thermal relief. The exposed ground pad of the ADRF5051, which is soldered on the PCB ground pad, is the main thermal conduit for heat dissipation. The total board thickness is approximately 62mil for mechanical strength.

POWER SUPPLY AND CONTROL CONNECTIONS

The ADRF5051-EVALZ has two power supply pins (VDD and VSS), four control pins (V1, V2, EN, and LS), and a ground pin (GND) that are all connected with DC test points. The VDD and VSS supply pins and control pins of the ADRF5051 are decoupled with 100pF capacitors.

Table 1. Power Supply and Control Connections

Test Point	Description
VDD	+3.3V supply voltage
VSS	−3.3V supply voltage
V1	Control Input 1
V2	Control Input 2
EN	Enable
LS	Logic select
GND	Ground

EVALUATION BOARD HARDWARE

RF CONNECTIONS

The ADRF5051-EVALZ has five edge-mounted, 2.92mm connectors for the RF ports, as detailed in [Table 2](#).

Table 2. RF Inputs and Outputs

SMA Connector	Description
RFC	RF common port
RF1	RF Throw Port 1
RF2	RF Throw Port 2
RF3	RF Throw Port 3
RF4	RF Throw Port 4

The ADRF5051-EVALZ is shipped together with a through line that is used for de-embedding the board loss effects from the measurements, which are enabled to determine the device performance at the pins of the ADRF5051. [Figure 3](#) shows the typical board loss (through line) for the ADRF5051-EVALZ at room temperature, as well as the nonde-embedded and de-embedded insertion loss for the ADRF5051.

Figure 3. Insertion Loss vs. Frequency

TEST PROCEDURE

BIASING SEQUENCE

The ADRF5051-EVALZ is shipped fully assembled and tested. Figure 4 provides a basic test setup diagram to evaluate the S-parameters using a network analyzer. Take the following steps to complete the test setup and to verify the operation of the ADRF5051-EVALZ:

1. Connect the GND test point to the ground terminal of the power supply.
2. Connect the VDD test point to the voltage output terminal of the 3.3V supply.
3. Connect the VSS test point to the voltage output terminal of the -3.3V supply. Note that the current from the VDD test point is approximately 160μA and from the VSS test point is approximately 540μA.
4. Connect the V1, V2, EN, and LS test points to the voltage output terminal of the 3.3V supply. The ADRF5051 can be configured in different modes by connecting the control test points to 3.3V or 0V, as detailed in Table 3.
5. Connect a calibrated network analyzer to the RFC, RF1, RF2, RF3, and RF4 2.92mm connectors. If the network analyzer port count is not enough, terminate unused RF ports with 50Ω (see Figure 4). Set the power to -5dBm and sweep the frequency from 9kHz to 20GHz.
6. The ADRF5051-EVALZ is expected to have an insertion loss of 1.20dB at 20GHz. See Figure 3 for the nonde-embedded and de-embedded insertion loss. See Figure 5 to Figure 9 for the de-embedded results.

Additional test equipment is required to fully evaluate the device functions and performance.

Table 3. Control Voltage Truth Table

Digital Control Inputs				RFx Paths			
EN	LS	V1	V2	RF1 to RFC	RF2 to RFC	RF3 to RFC	RF4 to RFC
Low	Low	Low	Low	Insertion loss (on)	Isolation (off)	Isolation (off)	Isolation (off)
Low	Low	High	Low	Isolation (off)	Insertion loss (on)	Isolation (off)	Isolation (off)
Low	Low	Low	High	Isolation (off)	Isolation (off)	Insertion loss (on)	Isolation (off)
Low	Low	High	High	Isolation (off)	Isolation (off)	Isolation (off)	Insertion loss (on)
Low	High	Low	Low	Isolation (off)	Isolation (off)	Isolation (off)	Insertion loss (on)
Low	High	High	Low	Isolation (off)	Isolation (off)	Insertion loss (on)	Isolation (off)
Low	High	Low	High	Isolation (off)	Insertion loss (on)	Isolation (off)	Isolation (off)
Low	High	High	High	Insertion loss (on)	Isolation (off)	Isolation (off)	Isolation (off)
High	Low or high	Low or high	Low or high	Isolation (off)	Isolation (off)	Isolation (off)	Isolation (off)

For third-order intercept point evaluation, use two signal generators and a spectrum analyzer. A high isolation power combiner is also recommended.

For power compression and power handling evaluations, use a 2-channel power meter and a signal generator. A high enough power amplifier is also recommended at the input. Test accessories, such as couplers and attenuators, must have enough power handling.

1	PCB	Evaluation board	Analog Devices	ADRF5051-EVALZ

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed. All Analog Devices products contained herein are subject to release and availability.
