12.8
hybrid sampling,
autocalibration, 13.24
FFT output, 13.25
Autozero function, 13.26
block diagram, 13.24
FFT output, 13.25
temperature effects, 13.25
precision sampling, 13.10-25
data output,
parallel, 13.26-27
serial, 13.26, 28
DSP, data output, 13.26-28
parallel interface, 13.26-27
serial interface, 13.28
sampling, 13.12
autocalibrating, 13.14-15
analog ground sense, 13.16
with drive amplifier, 13.20-21
ENOB, 13.17
equivalent input circuit, 13.18
equivalent input noise, 13.17
S/N+D, 13.17
equivalent input noise, 13.13
input and reference interface, 13.14
noise sources, 13.13
sigma-delta,
third order,
comb filter, 14.18-19
description, 14.16-21
differential drive, 14.21
digital filter,
group delay, 14.19
settling time, 14.19
filter output, 14.17-18
filter response characteristics, 14.18
FIR filter, 14.18-19
specifications, 14.17
V.32 modem signal port, 18.18-19
block diagram, 18.18
specifications, 18.19
18-bit,
dual,
sigma-delta,
block diagram, 14.22
description, 14.22-25
differential driver, 14.25
digital filter,
characteristics, 14.24
response, 14.24
noise shaping, 14.23
specifications, 14.23
sigma-delta,
audio, 8.128-133
block diagram, 8.129
differential driver, 8.133
filter design, 8.130
filter response, 8.131
key specifications, 8.129
switched capacitor, 8.132
22-bit,
quad sigma-delta, 6.47-48
circuit, 6.48
features, 6.48
24-bit, sigma-delta, 6.40
analog multiplexer, 12.31
antialiasing filter, 12.5-8
aperture delay time, 12.28
aperture jitter, 12.29-30
ENOB, 12.30
SNR, 12.30
audio, 14.22-25
bench testing,
ac linearity using histograms, 16.8-9
decimation, 16.7
DSP techniques, 16.7-9
PC-based system, 16.8
bit error rate, 12.33-38
high frequency testing, analog input, 12.36
input frequencies, 12.37
low frequency testing, analog input, 12.36
random noise, 12.33
testing, 12.35
bit sizes, 12.8-9
characteristics, 12.12
clipping, 10.28
CODEC, 8.4-5
coherent sampling, requirements, 16.11
decoupling, 13.39
distortion,
analysis, 12.16
discontinuity, 12.16-17
transfer characteristics, 12.16
drive amplifier, characteristics, 13.2
dynamic range, 12.7-17
autocalibration, 15.9
dither signals, 15.6-9
error correction, 15.8
dynamic testing, 12.9
dynamic transfer,
analog evaluation, 16.4-7
beat frequency test, 16.4-7
Nyquist input, 16.6
effective aperture delay time, 12.28
measurement, 12.28
ENOB, 12.11, 13
error codes, 12.33
evaluation board, 16.1
FFT, 12.13
noise measurement, 12.14
FFT output, 12.10
FFT testing, 16.9-16
coherent, 16.10-11

frequency bin width, 16.9-10
mathematical software, 16.9
QuickBasic routines, 16.17-19
flash converter,
block diagram, 13.3
dynamic performance, 13.2
ENOB, 12.19
equivalent input circuit, 12.20
error sources, 12.17-21
external voltage reference, 13.5
harmonic distortion, 12.19
input protection, Schottky diodes, 13.31-32
interface circuit, 13.4
internal voltage reference, 13.4
latched data output, 13.6-7
latency, 13.7
output data,
latency, 13.7
pipeline delay, 13.7
pipeline delay, 13.7, 8-9
quadrature receiver application, 13.3
signal-dependent capacitance, 12.20
SNR, 12.19
thermometer code, 12.17-18
timing diagram, 13.6
latency, 13.7
pipeline delay, 13.7, 8-9
three clock-cycle latency, 13.9
total harmonic distortion, 12.21
full-power bandwidth, 12.12-13
grounding, 13.38
high resolution, 15.1
high speed,
3-terminal regulator as supply, 13.31
demultiplexing output, 13.9-10
drive amplifier, 13.2-8
characteristics, 13.2
input protection, 13.29-31
clamp circuit, 13.29
latchup, 13.29
protection, 13.30
output data, 13.6-8
overdrive, 13.29
overvoltage, power supply sequencing, 13.30
slow memory storage, 13.10
supply sequencing damage, protection,13.30
input,
Gaussian wideband noise, 15.7
SHA, 4.1
interfacing, requirements, 13.1
intermediate frequency, sampling rate, 15.13
Mathcad routines, 16.20-22
metastability, 12.33-38
multi-bit,
sigma-delta, 14.33-34
first-order, diagram, 14.34
summary, 14.34-35
noise, 12.33
non-sigma-delta, data acquisition, 14.18
Nyquist sampling, 12.1
on-chip SHA, 4.7
overvoltage recovery time, 12.32
peak harmonious component, 12.13
peak spurious, 12.13
PGA, gain controlled by serial interface, 3.14
precision, low noise, voltage reference, 13.22
quantization theory basics, 12.10
recursive subranging, 12.25-26
resolution, 12.7-17
sampling, 4.1
aperture jitter, 13.32-33
clock generator circuit, 13.34
clock signal, 13.32-34
ENOB, 12.9
phase jitter, 13.32
precision low-jitter, 13.34
SNR, 12.11
sampling rate, 12.5-8
serial output, 6.40-41
advantages, 6.40
settling time, 12.30-31
SFDR, 9.14; 12.13
definition, 12.15
and frequency, 12.15
from input signal, 12.14
SHA,
block diagram, 15.20
driving flash converter, 15.21
function, 15.15-16
timing optimization, 15.19
sigma-delta, 14.1-35
antialiasing filter, decimation, 14.2-3
audio, 14.22-25
bandpass, 15.23
digital filter, 15.25
ENOB, 15.24
experimental, summary, 15.25
fourth-order, structure, 15.24
noise shaping, 15.23
charge-balance, 6.5
conversion time, 6.7
decimation, 14.10-13, 13
digital filter,
measured group delay, 14.18-19
settling time, 14.18-19
digital filtering, 14.10-13, 13
direct intermediate frequency-to-digital conversion, 15.22-25
effective resolution, 6.9

filter setting, conversion and settling time, 6.8
finite impulse filter, 14.2-3, 12
first order,
diagram, 14.5
noise shaping, 14.8-9
SNR versus oversampling, 14.8-9
higher-order, characteristics, 14.32
idling pattern, 14.13-14
infinite impulse filter, 14.12
MASH,
characteristics, 14.32-33
diagram, 14.32
three-stage, 14.31-33
modulator, 14.4-9
equivalent input circuit, 14.25
frequency domain linearized model, 14.7
higher order, 14.15-16
idling pattern, 14.14-15
repetitive bit pattern, 14.14
switched-capacitor architecture, 14.19-20
waveforms, 14.6
noise shaping filter, 14.7-8
Nyquist sampling, 14.2-3
oversampling, 14.2-4
benefits, 14.4
PGA function, 6.6
quantization noise shaping, 14.5-9
distribution, 14.8
second order,
diagram, 14.8-9
noise shaping, 14.8-9
SNR versus oversampling, 14.8-9
signal conditioning transducer input, 6.1-31
analog input structure, 6.14
anti-aliasing filter, 6.12-14
applications, 6.25-31
calibration, 6.20-24
characteristics, 6.1
connections, 6.16
conversion errors, 6.15
differences, 6.3
digital filter frequency response, 6.7
effective resolution, 6.9-10
features, 6.3
high integration, 6.2
microprocessor interface, 6.27
noise, 6.9-11, 18-19
optimizing, 6.12
noise limitations, 6.8
noise-free codes, 6.11
operation theory, 6.5
overvoltage protection, 6.17
sensor applications, 6.4
serial interface, 6.25-26
voltage reference, 6.17
weigh scale, 6.25
third order,
description, 14.16-21
SNR versus oversampling, 14.8-9
tonal considerations, 14.13-14
traditional, noise shaping, 15.23
voltage reference, 5.15-16
dynamic load effects, 5.17
noise, 5.17
stability, 5.20-21
single supply, 6.32-39
characteristics, 6.32
data acquisition system, 6.38-39
input range limit, supply voltage, 6.34
input scaling, 6.35
voltage reference, 6.36
SNR, 12.8-9
and frequency, 12.15
spectral analysis,
Minimum 4-Term Blackman-Harris window, 16.13
two-tone IMD testing, 16.13
weighting function, 16.13
wide dynamic range, 15.1-5
windowing function, 16.13-14
static transfer,
analog evaluation, 16.2-4
DAC output, 16.3
error, 16.4
triangular wave, 16.3
sub-Nyquist sampling, 12.1
subranging,
block diagram, 12.22
digital correction, 12.23-24
error sources, 12.27
error sources, 12.22-27
linearity errors, 12.27
successive approximation, voltage reference, dynamic transient load, 5.21
theoretical quantization noise, 12.8-9
transient response, 12.30-31
and VGA, 15.26-31
video, 4:1 multiplexer, 11.22
voltage reference, 5.16; 13.21-23
ADSP-2100 Family User's Manual, 18.42
Akazawa, Yukio, 12.39
Aliasing:
description, 12.3-4
frequency domain effects, 12.5
time domain effects, 12.4
Amplifier:
isolation,
3-port, 1.82
characteristics, 1.83

family, 1.84
motor control current sense, 1.84
transformer-isolated, 1.82-84
latch-up, 1.73-74
output, phase reversal, 1.72, 74
paralleling, precision line driver, 1.74-76
precision weight-scale, signal conditioning, 1.6-7
programmable gain, see: PGA
sample and hold, see: SHA
single supply RTD, linearized, 1.9-10
Amplifier Applications Guide (1990), 15.40
Amplifier Applications Guide (1992), 6.49; 10.33
Analog circuit:
high performance,
prototyping, 13.45-47
socket prohibition, 13.44-45
Analog multiplexer, data acquisition system, 12.31
Analog signal:
aliasing, 12.3
discrete time sampling, 12.2-5
multiplexed, 2.1-4
switched, 2.1-4
Analog switch:
characteristics, 2.2
CMOS, 2.1
ac parameter, 2.14-15
charge injection,
effects, 2.15
model, 2.14
adjacent, equivalent circuit, 2.9
advantages, 2.3-4
anatomy, 2.9-18
applying, 2.20-25
dynamic performance, 2.21
minimizing gain error and providing isolation, 2.25
minimizing on resistance, 2.22-23
noninverting solution, 2.25
minimizing on resistance versus temperature, 2.24
multiplex buffer into ADC, 2.25
parasitic capacitance, 2.22
switching time, 2.20
unity gain inverter with switched input, 2.21
on condition, dc performance, 2.10
crosstalk,
equivalent circuit, 2.17
performance, 2.17
diode protection, 2.6-7
error sources, 2.9-18
junction-isolated, diagram, 2.5
latchproof versus overvoltage protection, 2.8
latchup, diode protection, 2.6-7
off condition, dc performance, 2.10
off isolation, 2.13-14
off isolation versus frequency, 2.13
overcurrent, diode protection, 2.6-7
parasitic components, ac performance, 2.11
parasitic latchup, 2.4-8
performance, 2.9-18
series-pass capacitance, 2.11-12
settling time, 2.18
time constants required, 2.18
transfer accuracy versus frequency, 2.12
LC2MOS,
trench-isolation,
advantages, 2.19-20
structure, 2.20
Analog system, voltage references, 5.1-22

Andrews, James R., 16.23
ANSI Standard 268-15 (Revision 1987, amendments 1989, 1990, 1991), 8.17
Antialiasing filter, and oversampling, 14.3
Aperture jitter:
definition, 12.29
effects, 12.29
on ENOB, 13.32-33
on SNR, 13.32-33
ENOB, 12.30
SNR, 12.30
Application circuit, EMI reduction, 1.29-33
Asta, Dan, 15.39
Audio buffer amplifier:
capacitive load compensation,
external "in-loop," 8.69-70
internal, 8.68
passive, 8.66-67
high current, 8.63-65
unity gain stand-alone, 8.63
THD+N versus frequency, 8.65
Audio circuit:
diagram, 8.51
line level stages, 8.50-92
amplifiers, 8.50
drivers, 8.50
receivers, 8.50
transformers, 8.51
transformers, 8.51
Audio line amplifier, 8.50
current boosted, composite, 8.82
Audio line buffer, 8.63-92
Audio line driver, 8.50, 63-92
amplifier, test circuit, 8.71
capacitive loading, 8.65-66
current boosted, 8.79-81
composite, 8.81-82
THD+N versus frequency, 8.82
THD+N versus frequency, 8.80

differential, 8.83-86
cross-coupled, 8.85-86
THD+N versus frequency, 8.86
"inverter-follower," 8.83-85
THD+N versus frequency, 8.84
high current, 8.63-65
"inverter-follower", pseudo-differential, 8.85
overcompensation, 8.66
paralleled output, 8.75-77
single-ended, 8.70-71, 73-77
consumer equipment, 8.73-75
THD+N versus frequency, 8.75
transformer coupled, 8.87-91
with feedback, 8.88-91
steel core,
with feedback, THD+N versus frequency, 8.91
THD+N versus frequency, 8.89
with tertiary feedback, 8.89
THD+N versus frequency, 8.88
voltage follower amplifier, THD+N versus frequency, 8.71-73
wide dynamic range ultra low distortion, 8.77-78
THD versus frequency, 8.78
Audio line level stage, 8.50-92
Audio line receiver, 8.50, 52-62
"all inverting," 8.58-59
circuit, 8.58
THD+N versus frequency, 8.61
alternate balanced, 8.58
balanced, 8.56
common mode error versus frequency, 8.60
performance, 8.59-61
push-pull feedback, 8.57
THD+N versus frequency, 8.60
balanced feedback differential, 8.57
differential amplifier, 8.52
simple, load balance, 8.56
simple line receiver, 8.52-55
common mode rejection versus frequency, 8.54-55
components, 8.53
implementation, 8.55-56

Voltage-frequency converter:
characteristics, 1.87
charge-balance, 1.86-87
isolation device, 1.86-87
linearity, 1.89

W

Wainwright Instruments, Inc., 13.48
Waltman, Ron, 12.39
Weaver, Lindsay A., 17.20
Webb, Richard C., 15.39
Weeks, Pat, 16.23
Weems, David B., 8.117
Welland, D.R., 14.36
White, D, 8.99
Whitmore, Jerry, 2.1
Whitney, Dave, 8.98; 11.1, 12, 33, 35
Wideband noise, quantization noise
randomization, 15.7
Wideband signal, fidelity, measures, 9.2
Williams, Jim, 13.48
Windowing function, Hanning Window,
16.13
Wireless Communications Symposium,
Technical Papers (1993), 18.42
Witte, Robert A., 9.15
Wong, James, 1.1; 2.1; 4.1; 5.1
Woodward, Charles E., 12.39
Wooley, Bruce, 14.36
Wurcer, Scott, 8.40, 49, 62, 92

X

X-AMP, 15.28
dual exponential amplifier,
features, 15.29-30
gain, from control voltage, 15.29
noise, 15.31
operation, 15.29-31
single channel, 15.28

Z

Zener diode, breakdown, 1.66
Zeoli, G.W., 16.24
Zobel network, 8.103-104
Zumbahlen, Hank, 8.1, 101, 117
