

# ADI Wireless Seminar

2006

# Contents

- I. Wireless Systems Overview
- II. RF/IF Components and Specifications for Receivers
- III. RF/IF Components and Specifications for Transmitters
- IV. RF/IF Components - Active and Passive Mixers
- V. Phase-locked loops for high-frequency receivers and transmitters
- VI. A Detailed Look at Wireless Signal Chain Architectures
- VII. Optimizing Receiver Performance through Error Vector Analysis
- VIII. Design and Operation of Automatic Gain Control Loops for Receivers in Modern Communications Systems
- IX. Using Calibration and Temperature Compensation to improve RF Detector Accuracy
- X. Techniques for Measuring RF Gain and VSWR
- XI. A 2.4-GHz Direct Conversion Transmitter for WiMAX and WiBro Applications
- XII. Design a Direct 6-GHz Local Oscillator with a Wideband, Integer-N, PLL Synthesizer
- XIII. Short Range Wireless Devices - Building a global license-free system at frequencies below 1GHz
