Re: LTC5800IWR Voltage Enhancement

---

To whom it may concern,

The LTC5800IWR employs a voltage enhancement circuit that complies with the following statements:

The maximum internal voltage is +15V

The minimum internal voltage is 0 V

The elevated charge pump voltage is not present on any of the external pins.

The maximum internal capacitance of the component is 10nF.

Sincerely,

A handwritten signature in blue ink that reads 'Gordon Charles'.
